Subject: RE: FCC Environmental - Ft. Pierce Facility, used oil permit renewal application

Thanks for the update, Scott.
I was just getting ready to send you a message on a couple of other points regarding the Pompano Beach application.

1. On page 6-2, the last sentence in the Emergency Equipment refers to an attached figure that shows emergency equipment, etc. Are you referring to Figure 2 – Site Plan or is there some other figure that was not attached to the submittal?yes figure 2. A revised copy of Page 6-2 is attached with a specific reference to the site plan.

2. On page 8-4, the fourth sentence in the Closure of Tank farm Containment section is not complete. What is missing from the end of that sentence and any other sentences that might have been left out of that section? "removed." Need to be added to the end. No other sentence is missing. Page 8-4 was revised and is attached.

3. Figure 2 – Site Plan: Should the tank between Tanks 14 and 15 be labeled as 23D rather than the tank between tanks 8 and 9? Correct. There is no little skinny tank between 8&9. CAD error. A copy of the revised Site Plan is attached

4. I need to talk to you regarding the dimensions of the tank batteries as submitted for the containment calculations in the Spill Prevention, Control, and Countermeasure Plan. The dimensions do not seem to correlate with any of the drawings of the facility. Give me a call on this last point when you have had a chance to pull those documents together. As discussed I will correct or verify information in the SPCC and cc you upon completion in the next several weeks. This will not hold up issuance of the permit.

Tony for Pompano it would be less for max drums on site

Approximately
125 drums filters
25 pads / rags
25 absorbents
25 misc

Scott,

I should have thought of this sooner, but could you also provide the same update for the Pompano Beach facility?
Thanks.

Tony

Tony
Per our telephone discussion, the maximum drums on site at any time for the Fort Peirce facility would be 400.
A typical breakdown would be:

300 max for used oil filters
50 max for pads and rags
25 max absorbents
25 other, misc oils or haz-waste

We typically received one to three trailers a week (50-100 drums each). We process approximately 100 drums per day when operating.
Let me know if you have any other questions.

Thanks for your help on this

Subject: FCC Environmental - Ft. Pierce Facility, used oil permit renewal application

Hello Vinnie,

I am filling in for Bheem Kothur while he is out for the month of December. In reviewing the November 07, 2012 response to the September 21, 2012 notice of deficiencies for the Fort Pierce used oil and material processing permit renewal application (Florida permits 69806-HO-005 & 69806-SO-006) there is still one item that require clarification.

In your response to Comment 32 of the Notice of Deficiencies document, you have quantified the maximum amount of solid waste material that will be stored at the facility at any one time. This amount sums up to 10,230 55-gallon drums of oil filters and absorbents, and 2,511 tons of scrap metal.

This maximum storage amount is not covered in your financial assurance for the facility. The maximum amount of material stored on site at any time must be the amount that is provided for in your financial assurance calculations.

Processing of your renewal application will continue to be held in abeyance pending clarification of this item. Please provide your response to this request for clarification within 10-days. If you wish to discuss this item do not hesitate to contact me.

Sincerely,

Anthony R. Tripp, Ph.D., P.E.
