Attachments: SK Sanford Final Pemit Comments.pdf

Hi Daniel,

I was reviewing the final permit for our Sanford and have a couple of questions: Under Hazardous and Universal Waste Registration on page 2 it states "The Permittee may store up to 6,912 gals of waste handled under the transfer facility provisions at any one time in accordance with the maximum design capacity for storage limit reported on their Transfer Facility Notification Form dated August 13, 2008". This registration is renewed yearly and although this years is still in the process of being finalized the maximum capacity for transfer waste will be 11,880 gallons.

Part II Subpart B.1 - Container Storage Limit
6. The Permittee shall ensure that those containers being managed under the transporter/transfer station requirements are stored in the designated area shown in Attachment B. Attachment B is Figure 5.6-3 showing the Container Storage Area where a portion is designated for Transfer - 10-day wastes. There is also an additional Transfer Waste Storage Area on Attachment D - Return and Fill Shelter Area (Nothwest Quadrant) that is not noted in this subpart. While we do not routinely use this area it is designated for Transfer (10-day) Waste Storage.

I am attaching the above referenced pages and attachments for your review with the sections notated.

Thanks, Jeff
