Linda,

We should be able to take care of this with a minor modification of the permit. You will need to submit a Part I and any revisions to the application involving the handling of the post-retort material. This will include revised figures of where the material is currently stored and the area where it will be stored in the future. You need to describe the procedure for determining how the post-retort material is non-hazardous, contingencies for when it is not, and the procedure for moving the non-hazardous material from the north building to the south building. You will also need to revise any figures showing the location of the container for the maintenance parts and equipment and the location of the container for the drums and cardboard.

The modification fee will be $100. Bheem Kothur (245-8781) should be able to answer any permitting questions you might have.

Let me know if you have any other questions.

Sincerely,

Anthony R. Tripp, Ph.D., P.E.

Thanks for the quick response it is much appreciated.

I won't do anything until I hear from you on this.

Lin

Good afternoon,
Linda I spoke with Tony Tripp today about the questions regarding the movement

of the Non-Haz Post Retort Powder to the South Building and movement of the Maintenance Container in the North Storage Area to a new location. The North Storage area change appears to not need a modification. The movement of the Non-Haz Post Retort Powder is something that may require a modification. Tony has said he will look into both of these areas and contact you with a definitive answer.

Subject: Storage Containers in the back yard

Hi Aaron,
I hope this finds you well.
Randy and I are working on some cleaning and reorganizing and I have a question.
In the "backyard" (North) of the facility where the glass roll offs are. I am thinking I want to move the container that holds the maintenance parts and equipment to the area immediately BEHIND the facility on the north end. This will open up some much needed space in the backyard to allow for better storage of the drums and cardboard.

My question is this actually a modification to the permit? And if so what do I need to do to accomplish it.

Also, I am thinking I may want to look at moving the Non Haz Post Retort material downstairs to the ewaste and battery area where it will await outbound shipping. I will then use that space to open up receiving operations to clear some of the congestion in that area.

My question here is the same.
Is this a permit Mod and if so what do I need to do to accomplish it?

Thanks,

Lin
