2009 MSW quantities.pdf

Kevin

Here is the information I promised you.

Keene Road Class III landfill was first permitted in July 1999. It stopped receiving waste in mid-2009. It was configured as three parcels. Parcel 3 had been closed first. The top cover was completely installed on Parcel 3 by July 2007. The top cover for Parcels 1 and 2 was completely installed by June 2010.

Vista Class III Landfill was first permitted as Buttrey Landfill. That permit was issued in March 2001. Mr. Buttrey never placed waste in the landfill. He later sold the property to Waste Management. When Mr. Buttrey permitted the facility for Class III waste, a liner was not required. Although Waste Management could have disposed of Class III waste without a liner, they decided to operate with a single liner under the Class III waste. If they were to change to Class I waste (municipal solid waste) they would have to change to a double liner system.

I could not quickly find the amount of waste each landfill reported disposing. However, I did find the quantity of municipal solid waste each county reported as being landfilled. Since each county has only one Class I (MSW) landfill, the totals reported probably reflect what was disposed in the county owned landfill. However, since the JED Landfill in Osceola County is privately owned and operated, that landfill probably received waste from more than just Osceola County. So, the MSW disposed in Osceola County probably does not indicate the total tons disposed at the JED Landfill (Facility ID #89544).

I have attached a Table that was in the 2009 Solid Waste Report. The historical reports can be found at:
http://www.dep.state.fl.us/waste/quick_topics/publications/default.htm

Tom, I'd appreciate if you'd look through this infomercial from Waste Management. They call their design "state of the art" but seems to me to be basically meeting state standards.
I don't need quotes as much as info and background.
Thanks much,

Kevin
