Ms. Rush, Ms. Depradine and Ms. Heaviside:

During my daily landfill site inspection, I identified landfill gas odors, which appear to be emanating from our Cell 3 operations. We have an active gas collection system budgeted to be installed in 2014 in this cell. Due to the recent odor issue, we will be escalating the construction of a portion of the active gas collection system, which will include the installation of three horizontal gas collectors in Cell 3. Page 3 of the attached PDF file reflects the proposed horizontal gas collectors. We anticipate beginning construction the 3rd or 4th week of July.

In the interim period, we will be focusing on cover operations as well as the utilization of our odor misting system to control the odors.

Please contact me if you have any questions regarding this email.

Thank you.

Debbie
