Process Description first para:
Missing word ….. four of which as driver
Corrected!

Used oil from independent transporters … is not accepted….
Corrected!

I would just say that the facility no longer ships any used oil by rail.
Corrected!

Para 2 – no comma needed after "five" Corrected!

Filters to UES? I don't remember that. Please check – did you see the records? Called Mr. Englin to verify, and US Foundry in Miami is used. Not UES. Sorry, I think I misheard him.

Calling it JZ's shop implies that the bay is leased to someone. I would just say that there is an open mechanic's bay on the west side of the building, under an overhang. This is used for routine maintenance, including oil changes. Corrected!

The specification claim must be made for each batch of oil – they can't base the claim for a new batch on the previous analysis. The Dexsil kit is just for halogens, not water. Water is determined by an API method – (remember the oily flasks?) I may need to pick your brain regarding specification claims. But I'll review the powerpoint first before I come and bug you about it. Try and answer my own questions first!

Visquene and absorbents Corrected!

264.37 does not apply – that is a TSDF requirement. Cite 279.52(b)(3) Corrected!

279.22 – in the violation description , make it clear that the oil was generated on site, so that Tallahassee does not question why 279.54(f) was not cited. Corrected!

Subject: Synergy Recycling of Central Florida - FLR000053611 - Draft Report for Review

Good morning,

Attached is my DRAFT inspection report for Synergy Recycling of Central Florida (FLR000053611) for review. Please be aware, this is the first UOT/UOP report I've drafted. Please let me know if I missed anything or if you have any questions.

Thank you,

Abigail Bridges
