Gloria and Brad,

This email is to inform the Department that Volusia County Solid Waste repaired two small weeps on the south slope of the active class I cell. The weeps were located to the west of the recently constructed toe drain. Both weeps were small in size and did not have ponding leachate associated with them just staining of the soil. The repair method previously submitted was used to address the weeps. The area was excavated to approximately 4 feet below surface and the bottom 2 feet were back filled with #57 stone to enhance drainage. The area remaining was back filled with clean soil and compacted. The areas will continue to be monitored.

If you have any questions or need additional information please let me know.

Thanks,
Jennifer
