Subject: Intial Detection Notification - Vista Landfill, Orange County, Florida, WACS Facility ID - 09207039.04
Date: Tuesday, February 12, 2013 2:40:08 PM

Pursuant to Condition 4 of the Monitoring Plan Implementation Schedule (MPIS) associated with the above referenced permit, Vista Landfill, Inc., (VLF) hereby notifies the Florida Department of Environmental Protection ("the Department") of first-time parameter detections above the Department's water quality standards ("exceedance") specified in Chapter 62-520, FAC.

An initial detection of chlorine dioxide in background monitoring wells MW-2AR, MW-7A, and MW-8R above the Department's water quality standards was observed. Chlorine dioxide is a field parameter. Chlorine dioxide is a byproduct of water treatment and most likely related to the upgradient RIBs facilities. The detections are in background wells. Significant increases in the indicator parameters were not observed; therefore, this suggests that the landfill is not the source for these impacts. All other constituents above the Department's water quality standards or criteria specified in Chapter 62-520, FAC in monitoring wells at VLF have been previously reported and will be discussed in the forthcoming semi-annual report of the December 2012 data.
