## HAZARDOUS WASTE INSPECTION REPORT

### Introduction:

Veolia Environmental Services Technical Solutions, Transfer Facility (Veolia TF), formerly Onyx Environmental Services notified the Department of universal waste transfer area activities for a parking area within the industrial park at 4972 Woodville Highway, South Lot, Tallahassee, on January 9, 2006. This area is used for trailer/van parking for Veolia transport vehicles prior to and after unloading at the mercury containing lamps and devices storage, recovery and reclamation facility. No violations were cited during the last inspection of Veolia TF, conducted in May 16, 2007.

### Process Description:

This location is a transfer area and regulations allow parking of the trailer/van in this area for up to 10 days maximum. Veolia trailer/van arrivals at the facility have shipping documents reviewed by the Operations Manager. Any manifested Hazardous Waste in the shipment is immediately removed at the Veolia TSD facility prior to parking of any trailer/van in this Transfer Facility (South lot). A Transfer Facility 10 Day Log is used to monitor trailer/van arrivals dates, HW unloading, mandatory unload date and actual unload dates. The Transfer Facility logs and yard are checked daily to ensure compliance with procedures.

### Violations Summary

#### Violations

No Violations

#### Areas of Concern

No Areas of Concern

### Comments:

**Comment Date:** 09/10/2008

**User:** BYER\_J

**Description:** Jim Byer and Aaron Mitchell inspected Veolia Transfer Facility for the purpose of a RCRA compliance inspection for the universal waste transfer area. Linda Dunwoody and Randy Williams provided access to the facilities and descriptions of the processes. Copies of the 10-Day Material Log showing arrival dates 6-27-08 thru 8-27-08 were printed and used as reference for this inspection. A review of the Log indicated that manifested hazardous waste is unloaded on the day of arrival and no trailers arriving within this time frame were allowed to remain parked in the Transfer Facility loaded for more than 10 days.

At the time of this inspection the database records and in-coming trailer/van folders indicated trailers parked in Dock 1 and Dock 2 at the storage, recovery and reclamation facility and eight trailers parked in the transfer area were waiting to be unloaded.

A physical inspection of the transfer area was conducted. There were eight in-coming trailers parked in the area. Three trailers were being used for storage of equipment, ballast, and electronics or metal for recycling. Five of the trailers were empty and/or outbound. Two of the in-coming trailers were opened, inspected, and shipping papers vs actual contents verified. One of the storage and one out-going (empty) trailer were opened and actual contents verified.

No hazardous waste (manifested or un-manifested) was observed within any of the trailers.
