Subject: Alternate methods and meeting

RMC QA'ed
Initials _____ Date _____

Just an informal FYI on distiller results with metal rods added.

Run 868 - 1/21/04 - Before 400mg/kg - After 3.3mg/kg = 99.2%

(duplicated after sample - 2.9mg/kg = 99.3%)

Run 872 - 2/04/04 - Before 420mg/kg - After 5.5mg/kg = 98.7%

When you were here last month, we talked about getting together to discuss the variance. How does March 16th sound? Phill will be down here then. We can meet in either Tallahassee or Pensacola. Let me know if this works.

Looking forward to hearing from you,

Jeff Kirk
