Dear Denise

Covanta Secure Services, Inc. is pleased to provide this approval for waste-to-energy disposal of the above-referenced material at Covanta Lake, Inc. This approval letter will remain in effect until another approval letter is issued for this waste stream superceding this document.

The attached Covanta Secure Services, Inc. "Terms and Conditions" sheet lists the Covanta facilities approved for acceptance of this material and who to contact to schedule delivery and disposal. The Terms and Conditions sheet also provides specific packaging and delivery requirements for these materials. Failure to comply with these requirements will result in unnecessary delays, possible rejection of your materials and/or added costs.

A "Non-Hazardous Certification" is also enclosed with this approval. The form must be signed by an authorized generator representative and accompany the manifest for every load scheduled for entry into our facility. Also enclosed for your information is a sample Preshipment Notification which is used for the purposes of confirming delivery once the appointment has been scheduled, stating correct billing information and serving as Certificate of Disposal.

Covanta Secure Services, Inc. will provide additional labor, when required, to manage your materials at the Covanta disposal facility. The per ton price is exclusive of sales tax and any per ton tax or fee imposed on solid waste delivery or disposal. Delivery and disposal of waste under this approval # 8745 is subject to the terms and conditions of your contract dated 9/16/2010.

Thank you for this opportunity to assist you with your non-hazardous waste disposal needs. If you have any questions or require additional assistance, please contact me at (800) 950-8749 or directly at the number listed below.

Sincerely,

Account Exec. Nora Petriello (973) 882-7060
EH&S Rep. John Frotton (973) 882-7010

Guidelines

General Requirements

Due to the potential for the presence of regulated hazardous substances, the first step should be to contact the state regulatory agency for a determination, in writing, that the materials collected are not regulated under the hazardous waste rules. It should be made clear to the state that the source of these materials is households only. If received, all collected materials can be delivered to a Covanta facility. However, this does not include regulated medical wastes (e.g. sharps) or materials containing mercury.

If a non-hazardous determination is not received from the state regulatory agency, the regulated hazardous materials must be separated as they cannot be accepted at a Covanta facility.

Packaging

Materials must be packaged in combustible containers such as cardboard boxes or fiber drums. Not steel drums will be accepted. The container weight should be limited to 50 pounds.

Delivery

The facility will be contacted to schedule a delivery. Due to the potential presence of controlled substances, each delivery will be accompanied by a witness. The attached forms must also be filled out and presented to the facility at the time of the delivery.

Destruction

Destruction will be by direct hopper feed or modified grapple feed only. The witness shall remain at the facility until all the material has been fed into the boiler.
