RE: Safety-Kleen Systems, Inc., Tampa Septic System Plan/Report.

Dear Mr. Russell:

The purpose of this letter is to provide, as requested in your letter dated 1/4/12, the Department with a plan/report regarding the septic system and associated material at Safety-Kleen's Tampa facility.

Corrective actions have been implemented at the facility to eliminate future chemical discharges into the septic tank. Although the manner in which these chemicals were introduced cannot be determined as a matter of fact, Safety-Kleen believes that they may have been introduced through an operable sink that was located in the South Container Storage Building. Our records indicate that the septic tank has not been pumped out for at least 10 years and de minimis impacts from unknown sources have accumulated resulting in low levels of contaminants in the tank. Since discovery of these contaminants Safety-Kleen has taken the following corrective actions:

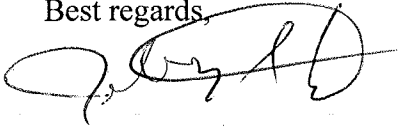

- The sink in the South Container Storage Building has been removed as a short term solution to eliminate any possibility of further discharges of chemicals to the septic tank.
- Safety-Kleen's long term solution is to connect to the local water and sewer system. The project is underway and the status is as follows: Quotes have been received from two qualified engineering design firms and a decision on which to employ will be made this week, the engineering firms estimate 7 weeks to investigation, design, review, and permit approval from the local authorities, therefore we are anticipating acquisition of the permit by the end of March, once the permit is acquired work will begin for construction and connection to the public water & sewer systems and abandonment of the existing well and septic tank system with a projected date sometime in early May, 2012.

Mr. Merlin Russell Jr.
Florida Department of Environmental Protection

The septic system was cleaned out on 1/31/12. Safety-Kleen made a determination that the material in the septic tank would be managed as non-hazardous waste based on the analytical report of samples taken from the septic tank. This report is part of Safety-Kleen's Confirmatory Sampling Report for SWMU-21 dated December 16, 2011. The analysis and laboratory report were completed by Analytical Services, Inc., report number AUK0547, dated 1/5/11. Enclosed you will find copies of the disposal shipping papers, and correspondence from the City of Tampa wastewater treatment plant regarding acceptance of the septic tank material.

Thank you for the Departments time in this matter. If you have any questions or require additional information please do not hesitate to contact me.

Best regards,

Mr. Schoepke,

Thank you for the analytical data. Based on my review of the data, it would be acceptable to discharge the septic tank wastes from the local Safety-Kleen Systems facility at the City of Tampa wastewater treatment plant.
