RE: Sediment Sampling Report  
8<sup>th</sup> Avenue Property Stormwater Retention Pond  
EQ Florida, Inc., Tampa, Hillsborough County, FL

Dear Mr. Russell:

EQ Florida, Inc. retained Kleinfelder to prepare this sediment sampling report for the above-referenced facility. It includes a description of the sediment sampling activities and the laboratory analysis completed within the new "wet" stormwater retention pond located on the 8th Avenue property at the EQ facility.

Should you have questions or require additional information, please do not hesitate to contact me at (813) 887-3900 or via e-mail at [cpoole@kleinfelder.com](mailto:cpoole@kleinfelder.com).

Sincerely,  
**KLEINFELDER**

**Christopher B. Poole, PG, CPG**  
Associate, Program Manager

## 1.0 INTRODUCTION

---

This report summarizes the sediment sampling activities completed at the EQ Florida, Inc. facility located at 7202 East 8<sup>th</sup> Avenue, Tampa, Florida 33619. The activities discussed herein were completed in general accordance with the *Sediment Sampling and Analysis Plan*, dated December 23, 2011, prepared in support of these activities and the supplemental requirements provided in the Florida Department of Environmental Protection (FDEP) approval letter, dated January 4, 2012, attached hereto as Appendix A.

### 1.1 SITE BACKGROUND

EQ Florida, Inc. is a division of EQ Holding Company (EQ) of Wayne, Michigan. EQ owns and operates a permitted solid waste processing facility (FDEP ID #SWD/29/44633) in combination with a hazardous waste treatment and storage facility (US Environmental Protection Agency [EPA] ID #FLD981932494), hereinafter referred to as "the facility." The facility is approximately 4.53-acres in size and is located on two contiguous properties: 2002 North Orient Road (hereinafter referred to as the "Orient Road property") and 7202 East 8<sup>th</sup> Avenue (hereinafter referred to as the "8<sup>th</sup> Avenue property") in Tampa, Florida. Figure 1 is a site location map and Figure 2 is a site plan which presents the layout of the facility and identifies key site areas and features.

In addition to being a permitted solid waste operation, the EQ facility is also registered as a hazardous waste treatment and storage facility (TSDF), a 10-day hazardous waste transfer facility, a used oil and filter collection facility, and a universal waste and mercury containing lamps and devices storage facility. The hazardous waste operations are conducted at the facility in accordance with FDEP hazardous waste operating permit # 34875-HO-009.

#### 1.1.1 8<sup>th</sup> Avenue Stormwater Retention Pond

A new "wet" stormwater retention pond was designed, constructed, and placed into operation during July 2010 in the northwest corner of the 8th Avenue property. The pond was constructed to support the expansion of operations in the waste processing building located here and exclusively collects stormwater runoff from the roof of the building. It was sized for both the permanent pool volume required and the 1-inch runoff storage (temporary pool). The pond is identified as Solid Waste Management Unit (SWMU) #15 under the facility's hazardous waste operating permit.

## 1.2 PURPOSE

Baseline sediment sampling was requested by FDEP in the stormwater retention pond located on the 8<sup>th</sup> Avenue property under the provisions of the facility's hazardous waste operating permit. This report summarizes the results and findings of this baseline sediment sampling, and provides recommendations, as appropriate.

## 2.0 FIELD INVESTIGATION

---

This section describes the sampling methodology, handling procedures, and laboratory analytical methods used during the baseline sediment sampling activities.

### 2.1 SEDIMENT SAMPLING METHODOLOGY

A Kleinfelder staff scientist arrived at the 8<sup>th</sup> Avenue property on January 27, 2012, and accessed the stormwater retention pond to collect sediment samples at two locations: near the inlet pipe to the pond; and the emergency outfall control structure. A sample location plan is provided as Figure 3. The sediment sampling locations were staked and located in the field using a handheld global positioning system (GPS) unit. Soil screening was completed in general accordance with Florida Department of Environmental Protection (FDEP) guidelines and standard operating procedures (SOPs). Sampling equipment was properly decontaminated prior to the initiation of sampling activities and between sampling locations.

Soil samples were obtained at the two locations using a hand auger from depths of approximately 0 to 12 inches below the bottom surface of the pond and placed in eight-ounce mason jars for field screening. After allowing the samples to equilibrate, volatiles were measured in the headspace using an organic vapor analyzer (OVA) equipped with a photo-ionization detector (PID). Sediment screening data collected using the OVA-PID indicated field readings of 0.0 parts per million (ppm) at both sediment sampling locations.

Soil was logged for lithology, soil type, color, texture, and grain size in general accordance with the Unified Soil Classification System (USCS). Other physical characteristics were recorded on field boring logs, including unique sample characteristics such as inclusions, staining, and detectable odors, if applicable. Soil lithology encountered in the sampled interval was predominantly characterized as grey medium-grained sand with some organic materials. Soil boring logs are attached as Appendix B.

### 2.2 SAMPLE HANDLING & CUSTODY

All collected samples were placed directly into laboratory-provided containers and placed in a cooler on ice. Upon completion of the sampling event, a chain of custody was completed for the samples to document the desired analytical procedures, analysis time (standard turnaround time of 10 working days) and custody record. The chain of custody was placed in the sample cooler and followed the samples through the laboratory analytical process. The sample cooler was sealed with a custody seal when

fieldwork was completed. The samples were properly packaged, preserved, and transferred to Accutest Laboratories Southeast (Accutest), a Florida Department of Health (FDOH)-certified laboratory (Certification #E83510) for analysis under standard chain of custody protocol.

### **2.3 LABORATORY ANALYTICAL METHODS**

The analytical parameters for the sediment samples were consistent with those provided by FDEP in their approval letter attached hereto (see Appendix A). Specifically, the collected sediment samples were analyzed for:

- Volatile Organic Compounds (VOCs) by EPA Method 8260B;
- Semi-volatile Organic Compounds (SVOCs) by EPA Method 8270D; and
- Resource Conservation and Recovery Act (RCRA) Metals by EPA Methods 3050B and 7471B

The laboratory analytical data for the sediment samples were reported and transmitted by Accutest in hardcopy format. The complete Accutest laboratory analytical report with chain of custody documentation is provided in Appendix C.

## 3.0 RESULTS

---

This section provides a summary of analytical results from the collected sediment samples and, where available, applicable regulatory criteria.

### 3.1 SEDIMENT SAMPLE RESULTS

The FDEP has developed interim Sediment Quality Assessment Guidelines (SQAGs) as provided in the technical report titled *Development and Evaluation of Numerical Sediment Quality Assessment Guidelines for Florida Inland Waters*, dated January 2003. Specifically, effects-based SQAGs and bioaccumulation-based SQAGs were evaluated and developed. The effects-based SQAGs, referred to as Threshold Effect Concentrations (TEC) and Probable Effect Concentrations (PEC), are intended to provide a means of determining the concentrations of sediment-associated contaminants that are unlikely to be associated with adverse biological effects (TECs) and those that are likely to be associated with sediment toxicity or other adverse effects on sediment dwelling organisms (PECs). By comparison, the bioaccumulation-based SQAGs are intended to identify the concentrations of sediment-associated contaminants that are unlikely to be associated with adverse effects on aquatic-dependent wildlife (Wildlife-Based SQAGs) or human health (Human Health-Based SQAGs). For the purposes of this baseline assessment, the sediment sample analytical results were compared to the effects-based TECs and PECs, where available, as discussed further below:

#### 3.1.1 VOCs

Methylene chloride was detected in samples SB-1 and SB-2 at low levels above the laboratory method detection limit (MDL). Effects-based SQAGs are not available for this chemical of concern (COC). No other VOCs were detected in the sediment samples.

#### 3.1.2 SVOCs

Benzo(a)anthracene, benzo(b)fluoranthene, chrysene, fluoranthene, and pyrene were detected in sample SB-2 at concentrations above the laboratory MDL, but below their associated TECs and PECs. Effects-based SQAGs are not available for benzo(b)fluoranthene. No other SVOCs were detected in the sediment samples.

### 3.1.3 METALS

Arsenic, barium, cadmium, chromium, lead, mercury, and selenium were detected in samples SB-1 and SB-2 at concentrations above the laboratory MDL, but below their associated TECs and PECs, with the exception of barium in sample SB-2. The barium concentration in this sample was above the TEC, but below the PEC. Effects-based SQAGs are not available for selenium.

## 4.0 FINDINGS

---

Baseline sediment sampling was completed as discussed herein in the stormwater retention pond located on the 8th Avenue property as requested by the FDEP. The sediment sample analytical results revealed low levels of COCs present at concentrations lower than effects-based SQAGs, where available, with the exception of barium in sample SB-2. The concentration of barium in this sample was just above the TEC, but well below the PEC.

Based on the results of the baseline sediment sampling activities discussed herein, Kleinfelder recommends no further assessment in the stormwater retention pond located on the 8<sup>th</sup> Avenue property at the facility.

## 5.0 LIMITATIONS

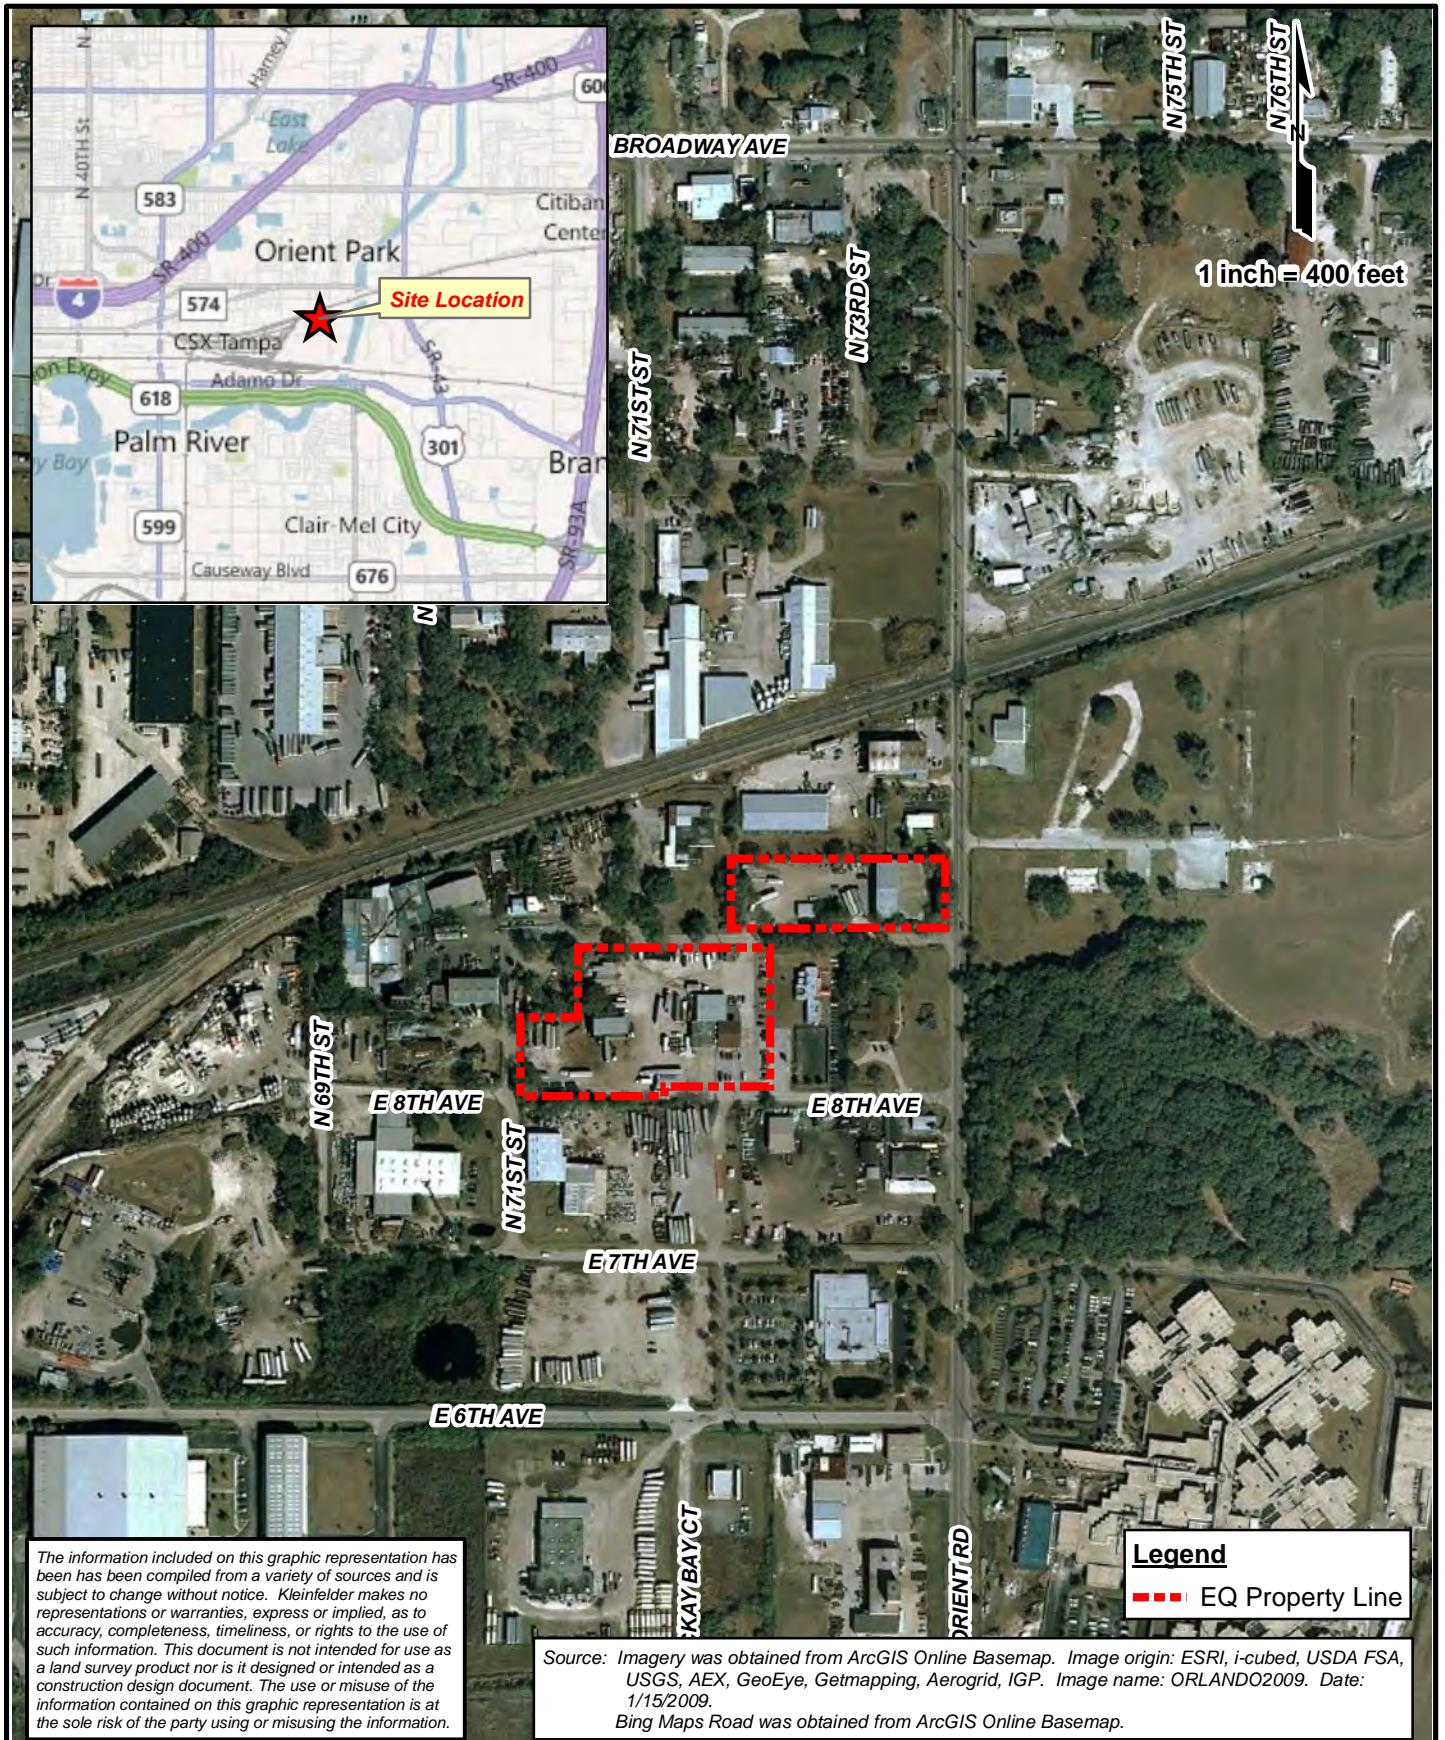

---

This work was performed in a manner consistent with that level of care and skill ordinarily exercised by other members of Kleinfelder's profession practicing in the same locality, under similar conditions and at the date the services are provided. Our conclusions, opinions, and recommendations are based on a limited number of observations and data. It is possible that conditions could vary between or beyond the data evaluated. Kleinfelder makes no other representation, guarantee, or warranty, express or implied, regarding the services, communication (oral or written), report, opinion, or instrument of service provided.

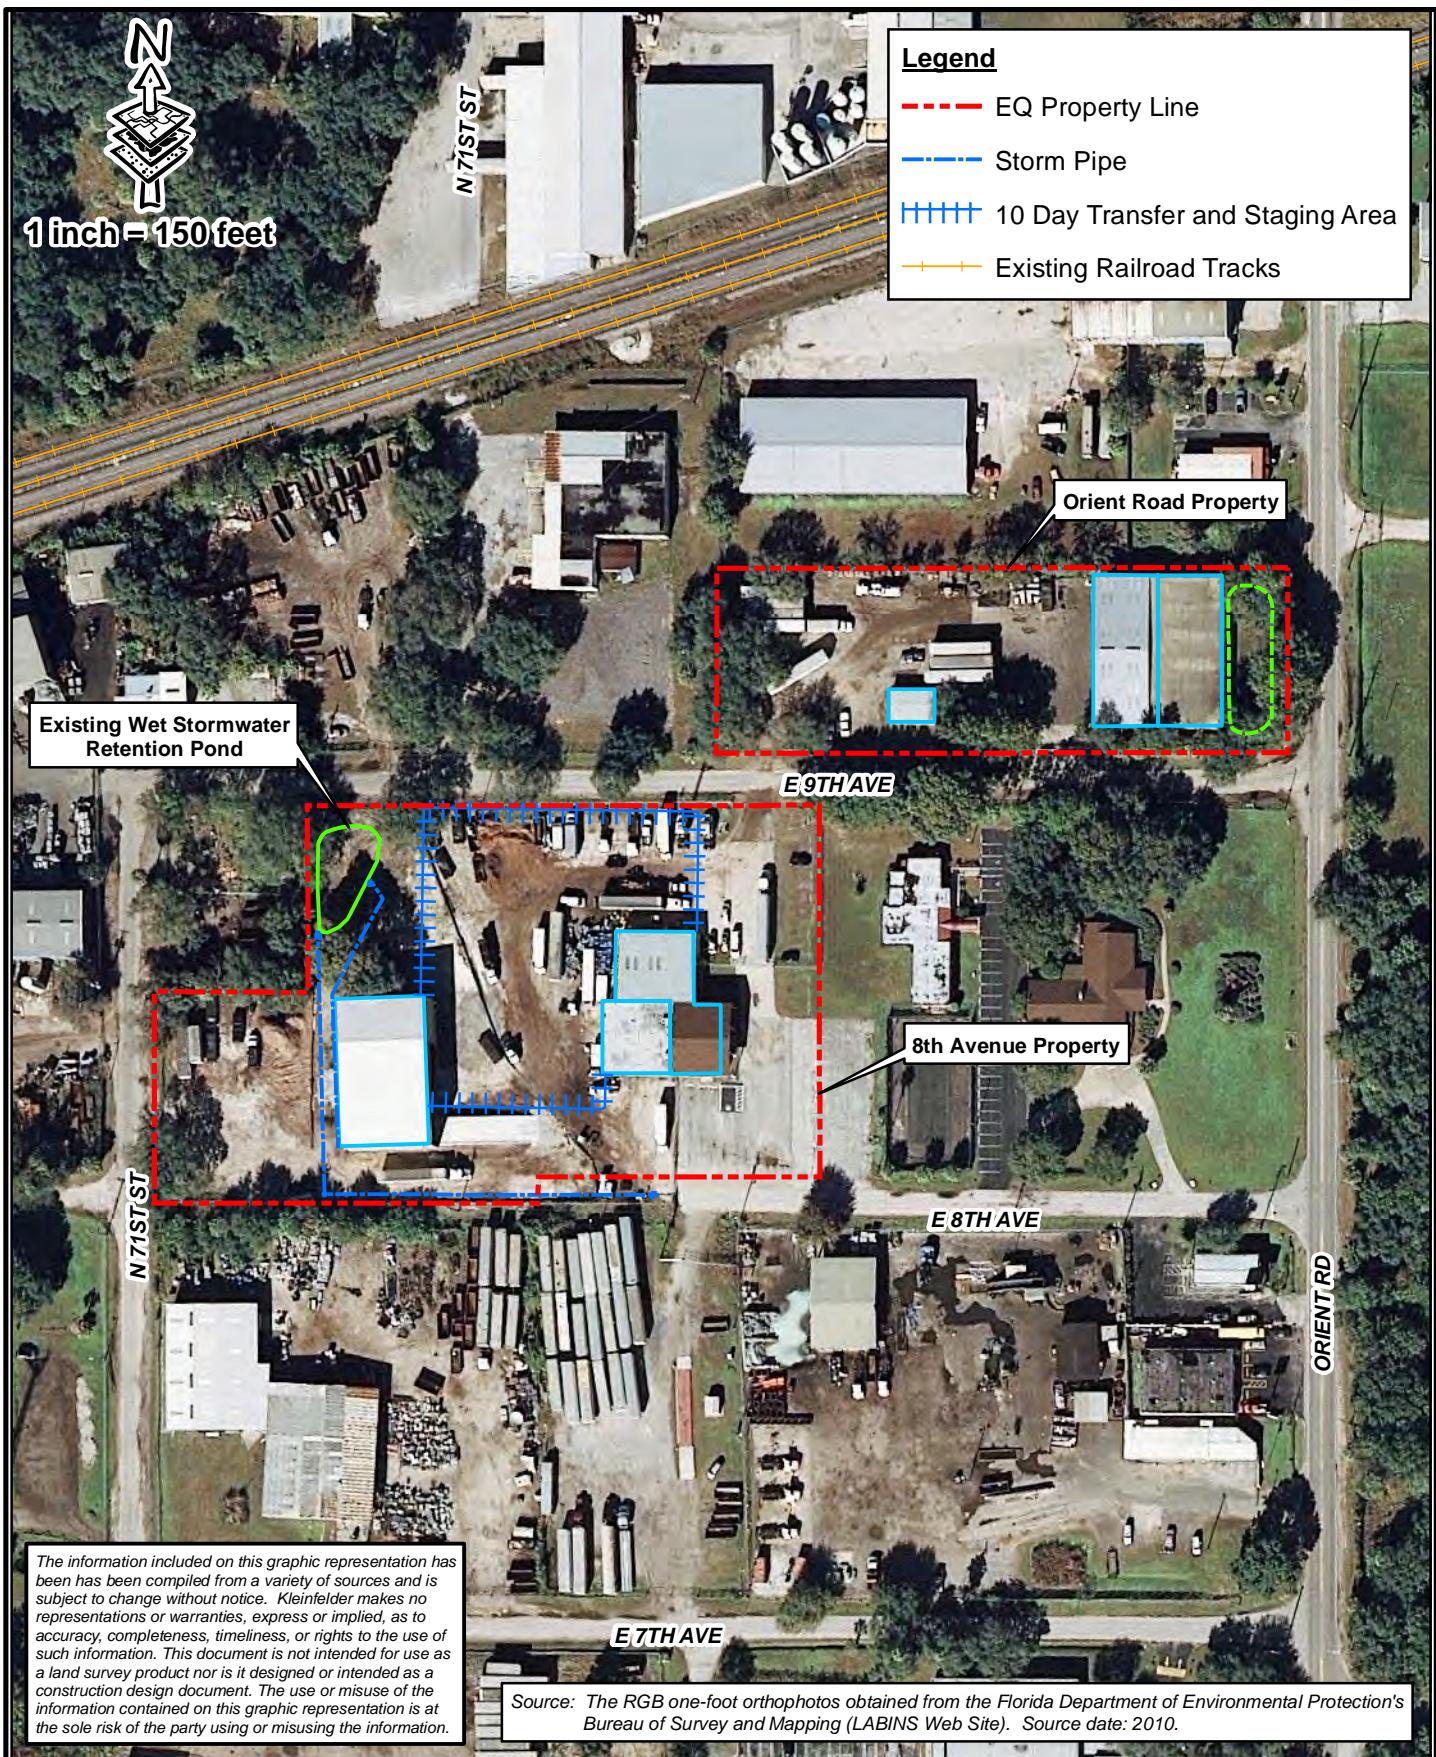

This report may be used only by the Client and the registered design professional in responsible charge and only for the purposes stated for this specific engagement within a reasonable time from its issuance, but in no event later than two (2) years from the date of the report.

The work performed was based on project information provided by Client. If Client does not retain Kleinfelder to review any plans and specifications, including any revisions or modifications to the plans and specifications, Kleinfelder assumes no responsibility for the suitability of our recommendations. In addition, if there are any changes in the field to the plans and specifications, Client must obtain written approval from Kleinfelder's engineer that such changes do not affect our recommendations. Failure to do so will vitiate Kleinfelder's recommendations.

Mr. Stuart Stapleton  
EHS Manager  
EQ Florida, Inc.  
7202 E. 8<sup>th</sup> Avenue  
Tampa, Florida 33619

Subject: EQ Florida, Inc.; FLD 981 932 494; Operating Permit 34875-HO-009, *Sediment Sampling and Analysis Plan, 8<sup>th</sup> Avenue Property Stormwater Retention Pond, EQ Florida, Inc., Tampa, Hillsborough County, Florida* dated December 23, 2011

Dear Mr. Stapleton:

The document is conditionally approved. Ensure that the following comments are addressed with the sampling and reporting.

The analyte list should ideally be based upon parameters reasonably expected to be captured in the pond. Figure 2 of the Plan identifies two storm pipes entering the pond, one leading from the building to the south of the pond and one from the southern property boundary that suggests an offsite source of stormwater, in part. Therefore, our recommendation is to sample for RCRA metals, and the 8260 volatile and 8270 semi-volatile suites; however, two samples should suffice. We recommend one from the northern portion of the pond and one from the southern portion of the pond.

As required by Specific Condition Part V.4, you must submit a Confirmatory Sampling Report (CSR) within 60 calendar days (March 5, 2012). To assist in your description of the development and construction history of the pond, it would be best to consolidate the information found in Parts P and Q of the Hazardous Waste Permit Application and the May 13, 2011 RFA Addendum. Your report may include previous data from within and near the pond (if any).

As a reminder, one hard copy of all documents must be submitted to the District FDEP office per Specific Condition 16.c. One hard copy and the electronic copy must be submitted to Tallahassee (Specific Condition 16.a and b).

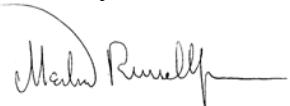

Mr. Stuart Stapleton

Zinc	anr					

Associated samples MP22243: F89846-1, F89846-2

Results &lt; IDL are shown as zero for calculation purposes

(\*) Outside of QC limits

(N) Matrix Spike Rec. outside of QC limits

(anr) Analyte not requested

(a) Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.

6.2.2  
6

## SPIKE BLANK AND LAB CONTROL SAMPLE SUMMARY
