ZONE	EXPLANATION
A	Areas of 100-year flood; base flood elevations and flood hazard factors not determined.
A0	Areas of 100-year shallow flooding where depths are between one (1) and three (3) feet; average depths of inundation are shown, but no flood hazard factors are determined.
AH	Areas of 100-year shallow flooding where depths are between one (1) and three (3) feet; base flood elevations are shown, but no flood hazard factors are determined.
A1-A30	Areas of 100-year flood; base flood elevations and flood hazard factors determined.
A99	Areas of 100-year flood to be protected by flood protection system under construction; base flood elevations and flood hazard factors not determined.
B	Areas between limits of the 100-year flood and 500-year flood; or certain areas subject to 100-year flooding with average depths less than one (1) foot or where the contributing drainage area is less than one square mile; or, areas protected by levees from the base flood. (Medium shading)
C	Areas of minimal flooding. (No shading)
D	Areas of undetermined, but possible, flood hazards.
V	Areas of 100-year coastal flood with velocity (wave action); base flood elevations and flood hazard factors not determined.
V1-V30	Areas of 100-year coastal flood with velocity (wave action); base flood elevations and flood hazard factors determined.

MOERMANN BROS. TANK GAUGE INSTALLATION

ENLARGED DETAIL SHOWING HOW TAPE IS WOUND ON PULLEY RACK ASSEMBLIES OF MOERMANN MODEL 7-S.
CUT OFF EXCESS TAPE AT FLOAT.

INSTALLATION INSTRUCTIONS - MODEL 7-S

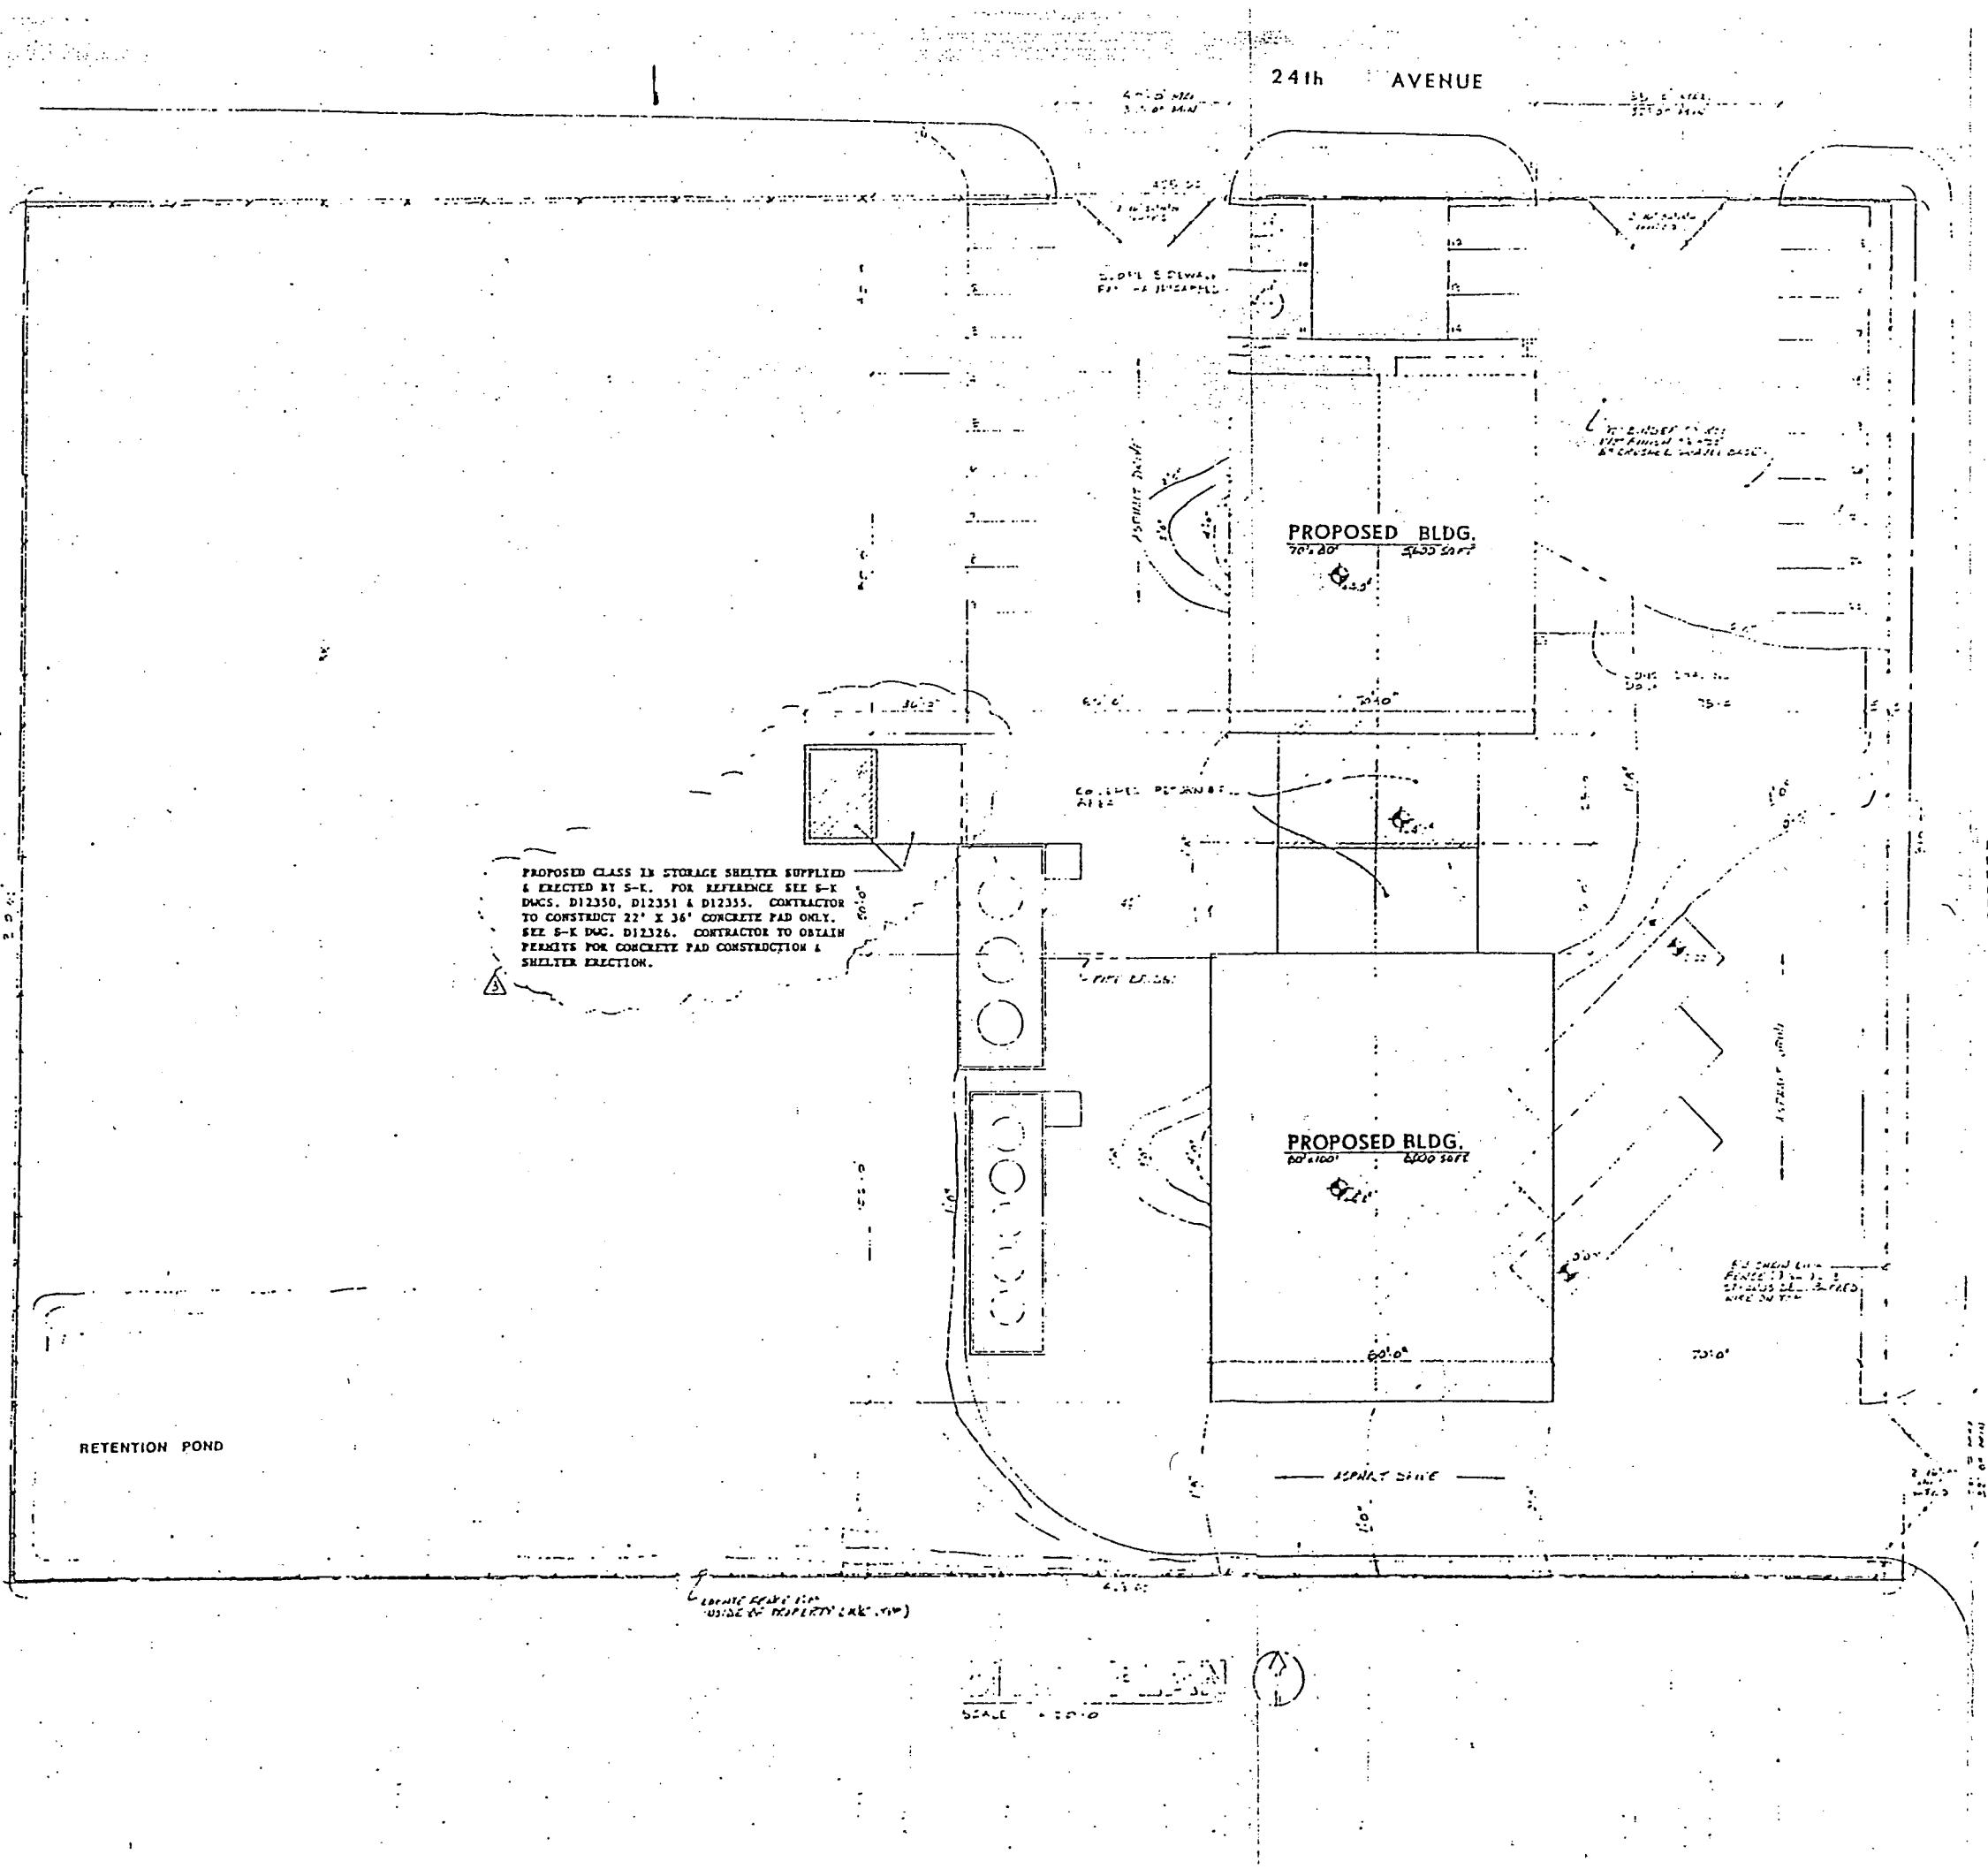

- Locate gauge location on ground - mark top edge of tank directly above ground location.
- Measure, cut and thread 2" pipe (as marked on print).
- Thread pipe down on all connections.
- Assemble both A-30 elbow and 2" pipe as shown on print.
- Screw (1) elbow A-30 onto 2" pipe with reducing bushing, close nipple and union as shown on print; other A-30 elbow onto 2" nipple in tank then screw other end of 2" pipe into tank elbow, make straight with tank marking.
- Level 2" pipe, use temporary wood brace or alignment flange, if necessary.
- Set gauge housing with eccentric cap assembled on ground directly below overhanging elbow.
- Measure for 1" pipe (reducing bushing in elbow to eccentric cap V-71 on gauge housing) allow for threads, cut and thread 1" pipe.
- Screw 1" pipe into elbow, then remove V-71 eccentric cap from housing and put on 1" pipe. CAUTION - Be sure eccentric cap is straight and 1" outlet is further away from tank.
- Fasten pulley rack with large pulley up to eccentric cap using stainless steel pins.
- Assemble outer pulley rack in counterweights with large pulley down.
- Place counterweights on ground directly beneath eccentric cap pulley rack.
- Remove A-33 cap from bottom elbow.
- Thread tape from top, elbow with numbers up and clip ends first through 2" pipe and over elbow pulley down through 1" pipe and out eccentric cap, straight down and around bottom pulley on C/W and up and over top pulley in eccentric cap, down to medium pulley up and over medium pulley, down and back around small pulley on C/W and up and around small pulley on eccentric cap, down and faster to hang on counterweight pulley rack - use stainless steel pins. CAUTION - Do not thread tape over or under cross bars in pulley rack. Use caution - do not kink or bend tape.
- Fasten tape to float with tape clamp (as per print) CAUTION - Do not tighten tape clamp too tight as this may damage tape.
- Place eccentric cap gasket on housing top and insert counterweight assembly into housing. CAUTION - Do not strain C/W to drop or lift as this may cause damage to housing, also be sure the tape is in groove of pulleys and not on the edge.
- Fasten housing to eccentric cap with observation window directly below 1" pipe.
- Place outside rim of housing over tape guide in observation window. CAUTION - Do not bend or kink tape, and cut ONLY ONE (1) strand of tape over the tape guide.
- If tank is empty, check tape reading at 1-1/8" (float draft) If it is perfectly full set reading exactly with this, make minor readjustments with float by floating tape through slot. Minor adjustments within 1" meter with observation finger.
- In setting the reading on the gauge, 1/8", 1/4" or even 1/16" is not close enough, be particular, set gauge to the exact amount of liquid in tank.
- CAUTION - Let float down in tank cavity. Do not let it drag.
- Armature connection frame and lid A-34-A-36 place on housing, tighten for vapor-proofing.
- Fix base for floating either, concrete, wood post, or steel plate welded to tank. CAUTION - Do not weld gauge housing to tank.
- In most climates, condensation forms inside the tank and gauge. A drain plug has been provided for draining at the bottom of housing. In most climates this is necessary 2 times a year during fall & fall; however, in extreme cases draining is required more often.
