

ATTACHMENT 4  
WASTE MANAGEMENT PLAN

#### **Attachment 4**

Sludges, residues and byproducts are managed using the same processes as detailed in Attachment 3 – Waste Analysis Plan. The Miami Facility will perform TCLP and EPA methods 8240 and 8260 analysis on grit trap waste/sludge when generated. The Miami Facility generates approximately 40,000 gallons of grit trap waste/sludge per year. The trap is cleaned proportional to the amount of solids generated, typically 2 to 8 times per year.

The maximum amount of materials to be generated from the solidification unit is approximately 100 tons per month.
