**Introduction:**

A routine hazardous waste inspection was conducted at Hull's Environmental Services, Tampa branch facility. The Tampa facility notified as a hazardous waste transporter in July 2014, and was inspected on 10/29/2014. This inspection was done as a routine periodic inspection, and to evaluate any operational changes. The company specializes in emergency response activities, and their major customer is CSX Transportation. The Tampa branch has less than 10 employees, and does not solicit used oil from typical generators, and does not conduct milk-run type pickups. Transportation activities are primarily done in connection with response activities.

**Process Description:**

The facility operations and processes were essentially the same as the 2014 inspection. (See the 2014 report for further details.)

- No vehicle maintenance is done on-site.
- Oily rags from equipment cleaning or draining is collected in closed 55-gallon drums and labeled properly, and stored within a secondary containment bin.
- There are no waste storage tanks or fuel tanks on-site.
- The facility is not used for waste storage and transfer. Wastes from response cleanups are shipped directly from the incident site to another transporter or transfer/disposal facility. (Should the need arise to store wastes at the Tampa facility, it will be kept <24 hours, and kept on the transport vehicle.)
- Several HW manifests were reviewed, with Hull's as Transporter 1, and found to be in order. All of the shipments were made directly, with no storage at the Tampa facility.

Inspection Date: 02/23/2017

- There were no indications of any spills or discharges at the facility.

**Conclusion:**

Based on this inspection, Hull's Environmental Services was operating in compliance with used oil and hazardous waste transportation requirements.

**6.0 - Transporters Checklist****Requirements:**

The requirements listed in this section provide an opportunity for the Department's inspector to indicate the conditions found at the time of the inspection. A "Not Ok" response to a requirement indicates either a potential violation of the corresponding rule or an area of concern that requires more attention. Both potential violations and areas of concern are discussed further at the end of this inspection report.
