Subject: Chem Con

I'd like to let you know of something that occurred this morning,
2/9/96, concerning Chem Con.

Chris St. John came into the office with paperwork requesting a Temp ID # for an office building that wanted to dispose of 2,000 gals. of Chromium contaminated waste waters generated from a HVAC System. Chem Con had advised Mr. John that they were the disposal facility and the application showed Chem Con as the disposal facility. I called Chem Con knowing this was wrong and talked to a women named Pat who was coordinating the pickup. Pat explained to me that Chem Con was going to consolidate the 2,000 gals of waste water with other waste (I did not ask her what) and use the Orlando Facility and EPA ID # as the designated disposal facility. I advised her that this was wrong and she figured it out and gave me the correct out-of-state TSDF.

Information for your records.
