Subject: Re: Chemical Conservation Corporation public notice

They will not be protected since the notice was not on the same day as the application as required by FS. They therefore are and will remain in violation of the STATUTE.

Subject: Chemical Conservation Corporation public notice

Talked with Diana about the public notice requirement for Chemcon's permit modification.

Just to update those of you who are not aware, Chemcon was issued a construction permit (3/19/93) to add a tank farm and fuel blending operation. They were also changing the configuration of their container storage unit and wanted to bulk F006 sludge. We have had several meetings with the facility where they conveyed the desire to modify the construction permit. They proposed relocating the tank farm and establishing a tank dedicated to adjust the pH and submitted a permit modification for this on 11/3/95. It was not public noticed at that time.

When the waste comes into Chemcon they assume the generator responsibility and the waste is manifested off as Chemcon generated waste, that is why we felt the generator would be allowed to conduct elementary neutralization in a tank/container. However, in reviewing the application they are also including an air stripper to treat VOC's as well as a sludge press and possible carbon absorption unit.

My question to Diana was if we could public notice at this stage in the game. She said the public notice is more to protect the facility and any petition filed must be within the time frame of the public notice.

I'm drafting Chemcon a letter today requesting they make public notice of the modification ASAP. Does anyone want to comment?

Thanks!

Mary

To: See Below

I will be going to Chemcon on February 20th (somewhere around 1:00) to walk through their entire operation.

Patricia Malloy will be explaining how the waste comes in, their data management tracking system, the consolidation operation, storage codes & locations, and final disposal activities.

Anyone who would like to join me is welcome. If you would really like to go but this is not a good time I will be happy to reschedule to accommodate, but please let me know ASAP.

Thanks!

Mary
