\*Indicate mechanisms that require use of a Standby Trust Fund Agreement

### III. ESTIMATE ADJUSTMENT: (check and use either box a or b, below)

Rule 62-710.800(6)(c), Florida Administrative Code, sets forth the method of annual cost estimate adjustment. Cost estimates may be adjusted by using an inflation factor or by recalculating the maximum costs of closing in current dollars. Estimates are due annually between January 1 and March 1. Select one of the methods of cost estimate adjustment below.

#### ☒ (a) Inflation Factor Adjustment

Inflation adjustment using an inflation factor may only be made when a Department approved closing cost estimate exists and no changes have occurred in the facility operation which would necessitate modification to the closure plan. The inflation factor is derived from the most recent Implicit Price Deflator for Gross National Product published by the U.S. Department of Commerce in its survey of Current Business. The inflation factor is the result of dividing the latest published annual Deflator by the Deflator for the previous year. The inflation factor may also be obtained from the Solid Waste Financial Coordinator at (850) 245-8732 or be found online at <http://www.dep.state.fl.us/waste/categories/swfr/>

This adjustment is based on the Department approved closing cost estimate dated: \_\_\_\_\_

### III. ESTIMATE ADJUSTMENT: (check and use either box a or b, below)

Rule 62-710.800(6)(c), Florida Administrative Code, sets forth the method of annual cost estimate adjustment. Cost estimates may be adjusted by using an inflation factor or by recalculating the maximum costs of closing in current dollars. Estimates are due annually between January 1 and March 1. Select one of the methods of cost estimate adjustment below.

#### (a) Inflation Factor Adjustment

Inflation adjustment using an inflation factor may only be made when a Department approved closing cost estimate exists and no changes have occurred in the facility operation which would necessitate modification to the closure plan. The inflation factor is derived from the most recent Implicit Price Deflator for Gross National Product published by the U.S. Department of Commerce in its survey of Current Business. The inflation factor is the result of dividing the latest published annual Deflator by the Deflator for the previous year. The inflation factor may also be obtained from the Solid Waste Financial Coordinator at (850) 245-8732 or be found online at <http://www.dep.state.fl.us/waste/categories/swfr/>

This adjustment is based on the Department approved closing cost estimate dated: \_\_\_\_\_

**CONTINGENCY PLAN AND EMERGENCY RESPONSE  
PROCEDURES**

Ricky's Oil & Environmental Service, LLC  
7209 NW 66<sup>th</sup> Street  
Miami, Florida 33166

EPA ID FLD981019755

August 9, 2017

## **SPILL RESPONSE PROCEDURES**

Should a leak, spill, or release of a petroleum product or oily wastewater occur, appropriate response actions shall be conducted to minimize the potential threat to human health and the environment. Outlined below is the "Four Step" spill response procedure which shall be a part of the employee-training program, and shall be implemented upon discovery of a spill event.

### **STEP 1**

#### **STOP THE DISCHARGE**

All appropriate action should be immediately taken to stop further discharge of pollutants. Such actions may include stopping product transfer, closing supply valves which feed into a leaking AST, transferring used oil from a leaking AGT/ AST into an appropriate holding vessel, etc. Once the additional discharge has been stopped, or if for some reason it is not possible to stop the additional discharge, the employee should begin Step 2.

### **STEP 2**

#### **CONTAIN THE SPILL**

The next priority is to prevent the spill from spreading to other areas. This may involve using a "spill-dry" material to absorb liquids, using absorbent "socks" to temporarily contain the spill run-off setting "sand-bag" berms for longer-term containment or to augment the absorbent "socks", etc.

### **STEP3**

#### **CLEAN-UP THE AFFECTED AREA**

Once the spill is contained or if there is no danger of the spill spreading, immediate spill clean-up actions shall be taken, such as pumping spilled liquids into an appropriate storage vessel, properly disposing of saturated "spill-dry" material, excavating petroleum contaminated soils, etc. all waste generated during clean-up procedures shall be disposed of properly.

### **STEP4**

#### **CORRECT THE PROBLEM**

Appropriate "after-the-fact" measures should be taken to help ensure that the spill incident is not repeated, including: repairing or replacing faulty equipment, supplemental employee training on the proper use of the machinery, etc.

Immediate response is necessary by the employee who discovers the product discharge to prevent further discharge and to minimize potential health and safety concerns. However, at some point during above described spill response procedure; it will be necessary for that employee to notify management, obtain additional clean-up assistance and/or contact the appropriate authorities. This decision will be made by the employee who discovers the spill, and shall be dependent upon the situation-specific circumstances. Therefore, it is essential that the Ricky's Oil & Environmental Service, LLC (ROES) management ensure that the employees are properly trained and tested on the spill response procedures, and be capable of exercising "good judgment" during a spill response.

Outlined below are certain phone numbers of agencies which may have to be notified of a spill event, contingent upon the severity of that spill. It should be noted that any spill of a pollutant exceeding twenty-five (25) gallons on a pervious surface shall be reported to DERM and FDEP within one working day, in accordance with Rule 62-761,460(2), MC. However, in a catastrophic event such as AST rupture and a containment breach that causes product to be discharged off-site, or a spill which potentially constitutes a fire and/or health hazard, certain agencies should be contacted as soon as possible.

<u>Emergency Response Agency</u>	<u>Phone Number</u>
Local Fire Department. Emergency services	911
DRER' s 24-Hour "Hotline"	305-372-6955
State of Florida Emergency Response	1-800-413-9911
EPA Region IV Emergency Response	1-404-347-4062
National Response Center (NRC)	1-800-424-8802

The above referenced numbers should be posted on, or near, each on-site telephone.

#### **CONTINGENCY PLANS AND EMERGENCY RESPONSE PROCEDURES SPILL CONTROL AND COUNTER MEASURES (SPCC) PLAN**

This section outlines contingency plans and emergency response procedures in the SPCC Plan to be implemented by ROES in the event of a fire, explosion or spill event at the facility. This section has been prepared in accordance with the requirements of 40 CFR Part 279.52. Included in this section are a description of emergency equipment at the facility; arrangements with local authorities and emergency agencies in the event of a fire, explosion, or spill event; procedures for responding to emergencies at the facility, as well as record keeping and reporting procedures. This section has been prepared utilizing the "Used Oil Processor Checklist" provided by FDEP. This subsections which follow correspond to each applicable item or group of items on the FDEP checklist.

#### **Contingency Plan Availability and Distribution**

Copies of this Contingency plan (as part of the SPCC) are on file at the facility's office trailer located on-site. In addition, copies of plan will be provided to each employee of ROES to

familiarize the employee with emergency response procedures. Copies of the plan will also be distributed to the local police department, fire department, emergency response agencies, and hospitals, simultaneously with submittal of this plan to FDEP.

## **EMERGENCY RESPONSE PROCEDURES**

### **Arrangements with Local Authorities**

The Following agencies have been contacted for the purpose of familiarizing the agencies with the operations, layout, materials used and emergency response procedures in case of a fire, explosion or spill event at the ROES facility

- a. Metro-Dade Police Department
- b. Metro-Dade Fire Prevention
- c. Metro-Dade Office of Emergency Management
- d. Local Emergency Planning Council
- e. Palmetto General Hospital

Copies of correspondence sent to each of the above agencies will be provided separately. Included in each transmittal is a copy of the SPCC Plan in order to provide the agencies with the necessary background information, and proposed emergency response procedures proposed for the facility.

### **Emergency Equipment**

ROES maintains certain equipment at the premises to be utilized in the case of an emergency involving a spill, fire or explosion. Table I of the SPCC Plan contains a summary of said equipment, including a description, specifications, location at the facility, and the capability of the equipment.

### **Emergency Coordinators**

The following individuals are designated as "emergency coordinators" in the case of a Fire, explosion or spill event at the facility:

**Elliott Paul**  
7101 N.W. 126 Terrace  
Parkland, Florida 33076  
(Cell) (904) 652 6765  
(Home) (954) 796 3358

**Rick Smerkers**  
2548 Center Gate Drive  
Apt. 208  
Miramar, FL 33025  
(Cell) (954) 325-5777

The emergency coordinators listed above are responsible for coordinating all emergency response measures, and thoroughly familiar with all aspects of the SPCC Plan, all operations

and activities at the facility, the location and characteristics of all used oil handled, the location of all records within the facility, and the layout of the facility. In addition, the emergency coordinators are authorized to commit funds and resources as may be necessary for response to emergency incidents at the facility.

### **Evacuation Plan**

As shown on Figure 2, the facility maintains one (1) driveway entrance. It is located on the southwest corner of the facility, and it accesses N.W. 66th Street. In case of an emergency involving a fire, explosion or spill, all facility personnel will be evacuated through the entrance. In the case that an emergency exists which dictates evacuations, the emergency coordinator will signal an evacuation alarm. Details of the alarm system are provided in Attachment 8 of the SPCC Plan.

### **Fire and Explosion Response Procedures**

In the case of an imminent or actual emergency situation involving a fire or explosion, the emergency coordinator or his designee on-site will activate internal facility alarm signals and communication systems. The emergency coordinator shall assess the safest facility exit and advise employees to proceed to evacuate the premises. The emergency coordinator shall also notify the appropriate local or State agencies. Notification to local or State agencies will include identification of the character, source, amount and extent, if any, of released materials. Concurrently, the emergency coordinator shall be responsible for the assessment of the possible hazard to human health or the environment in the surrounding area that may result from the fire or explosion. If a situation is found to exist which could threaten human health or the environment, the emergency coordinator shall:

- a) Notify local authorities if evacuation of surrounding areas is advisable.
- b) Notify the local and/or regional emergency response center, reporting his name and telephone number, name and address of the facility, time and type of incident, name and quantity of materials involved the extent of inquiries, and possible hazards to human health and the environment.

The emergency coordinator will take all reasonable measures to insure that additional fires or explosions do not occur.
