<b>Narrative:</b> Per SWO report: "A dumpster fire was reported at a business in the Gainesville area. The dumpster was reported to contain Acetone and charcoal. Local fire department and a HAZMAT Team responded to the scene. They reported a possible respiratory hazard due to the smoke from the fire. The fire was put out and they have continued to put water on the dumpster to keep it cool. No injuries reported." Chris Gilbert from Alachua County Environmental provided on scene response.

<p><b>Incident Narrative:</b></p> <p>Per report received from Perma-fix, 10 cubic yards of mixed hazardous waste solids contained in a roll-of box caught fire and were extinguished by the county fire department. (See Perma-fix incident summary for details.) Fire fighting operations generated a large quantity of potentially contaminated water a small portion of which left the containment on site and exited through a storm water outfall. As a result of the fire, 30 drums of contaminated solids and 28 totes of contaminated water were generated and will be shipped off-site for disposal.</p> <p>1/13/17 Don Mozick requested additional sample be taken of the soil on-site at the outfall, upstream and downstream of the outfall.</p> <p>1/31/17 the results were sent to OER's Gracie Kennedy.</p> <p>The samples were reviewed and there was contamination at tow of the points sampled. The outfall sample has Benzo(a)anthrance, Benzo(a)pyrene and Benz(b)flouranthene vaues that exceed state standards. The upstream sample exceed state standards for total arsenic.</p> <p>Spoke with the waste clean-up section about this and determined that more work needs to be done at the site. The case has been referred the Division of Waste Management for further action.</p>
