**RE: 2<sup>ND</sup> QUARTER GROUNDWATER MONITORING REPORT  
CRYSTAL RIVER SYNTHETIC GYPSUM STORAGE AND HANDLING FACILITY  
UNITED STATES GYPSUM COMPANY  
CITRUS COUNTY, FLORIDA  
ENVIRONMENTAL RESOURCE PERMIT NO. 312680-001 (DECEMBER 28, 2012)  
FDEP WACS FACILITY 100934**

Dear Mr. Whitehouse:

Golder Associates Inc. (Golder) is pleased to submit this letter that summarizes results for groundwater samples collected on December 17, 2012 at the referenced facility (facility or site) as part of a second quarterly groundwater monitoring event. On December 28, 2012, the Florida Department of Environmental Protection (FDEP) issued to the United States Gypsum Company (USG) the referenced environmental resource permit (ERP No. 312680-001) for construction of a surface water management system for a proposed synthetic gypsum storage and handling facility; attached to the ERP is a monitoring plan implementation schedule (MPIS). This report is being submitted in general accordance with Specific Condition 31.b of the ERP No. 312680-001.

## 1.0 BACKGROUND

On January 14, 2013, site development commenced as proposed in ERP No. 312680-001 and the notification of commencement that was submitted by USG on January 2, 2013 to the FDEP.. In a letter dated May 11, 2012, the FDEP was notified of USG's intent to design a groundwater monitoring plan (GWMP) for the site. During September 2012, four monitoring wells were installed and developed, as indicated on the monitoring well completion reports that we submitted to the FDEP on October 17, 2012 (stipulated by condition 13 of the MPIS). On September 24, 2012 groundwater samples were collected on from the four monitoring wells as Golder summarized in the November 14, 2012 letter report that we submitted to the FDEP, which included a figure depicting the monitoring well locations as surveyed by a Florida Licenses Surveyor and Mapper, and a copy of the surveyor's certified report (stipulated by condition 14 of the MPIS). The November 14, 2012 letter report included a plan to measure water levels and collect groundwater samples on a quarterly basis to further evaluate site specific groundwater conditions so that the results can be included in the GWMP that is currently due on August 31, 2013.

## 2.0 GROUNDWATER LEVELS

On December 17, 2012, the depth to water was measured to the nearest hundredth-foot below the top of the casing in monitoring wells MW-1 through MW-4. The December 2012 water-level measurements indicate a depth to water of approximately two to four feet below ground surface (ft bgs), whereas the September 2012 water levels were less than two ft bgs for monitoring well MW-2 through MW-4, and nearer to three ft bgs at monitoring well MW-1. Table 1 summarizes water-level data. The inferred direction of groundwater flow at the site on December 17, 2012 is approximately west-southwest, which is generally consistent with the southwest direction inferred from the data collected and reported for the

September 24, 2012 event. Figure 1 depicts water-level elevations, including interpolated water-level elevation isocontours for the December 17, 2012 event.

### 3.0 LABORATORY RESULTS

On December 17, 2012 groundwater samples were collected from monitoring wells MW-1 through MW-4 in accordance with the FDEP's standard operating procedures and sent to Accutest Laboratories Southeast, Inc. in Orlando, Florida, a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory, for analysis of aluminum, antimony, arsenic, cadmium, chromium, copper, iron, lead, manganese, mercury, molybdenum, nickel, selenium, sodium, chloride, nitrate as nitrogen, nitrite, sulfate, total dissolved solids (TDS), fluoride, gross alpha, radium-226, radium-228, boron, thallium, vanadium, and uranium. Attachment 1 provides copies of groundwater sampling logs for samples collected December 17, 2012. Table 2 summarizes laboratory reported concentrations for detected constituents.

For groundwater samples collected December 17, 2012, the laboratory reported that antimony, cadmium, chromium, copper, lead, nickel, nitrate, selenium, nitrite, thallium, uranium, and vanadium concentrations are below the laboratory method detection limits (MDLs) and that the MDLs are below groundwater criteria listed in Chapter 62-777 Florida Administrative Code (FAC). Chromium, nitrate, and uranium were detected by the laboratory in the groundwater samples collected on September 24, 2012 at the concentrations listed in Table 2. The laboratory reported detecting the remaining constituents analyzed in groundwater samples collected December 17, 2012 from at least one monitoring well, and select constituent concentrations are reportedly near or above the water quality criteria cited in Specific Condition 31(h) of the ERP 312680-001, as applicable. Attachment 2 provides a copy of the laboratory report.

### 4.0 CERTIFICATION

This document, titled *2<sup>nd</sup> Quarter Groundwater Monitoring Report...FDEP WACS Facility 100934*, dated February 12, 2013, was prepared in accordance with currently accepted practices in the field of hydrogeology under the supervision and oversight of the undersigned. No other warranties are expressed or implied.

  
Gregory A. O'Neal II, PG  
Florida License No. 2400

  
Date

A separate notification will be emailed to you for the groundwater sampling event scheduled to be conducted during March 2013. If you have any questions, comments, and/or require additional information, please call and/or email the undersigned.

Sincerely,

**GOLDER ASSOCIATES INC.**
