Contamination Assessment Report
Contamination Assessment Report Addendum

Dear Mr. Gerhardstein:

The Department has completed review of the Contamination Assessment Report (CAR) and CAR Addendum, received March 24 and May 29, 1997, respectively, and has the following comment:

The Summary of Soil Analytical Data presented in Table 7 and the Tetrachloroethylene (PCE) concentration in soil on Figure 11 indicates PCE concentrations of 34 micrograms per kilogram (ug/kg) and 32 ug/kg in soil samples S-4 and S-39 respectively. However, the soil sample laboratory analytical data in Appendix H indicates reported PCE concentrations of <25 ug/kg for soil samples S-4 and S-39. Additionally, the PCE concentrations presented on Figure 11 for soil sample S-3, S-27, S-35, and S-36 do not correspond to the laboratory analytical reports.

Please submit a revised Figure 11 and Table 7 within 30 days of receipt of this letter. Upon receipt of the correctly revised table and figure, the Department will issue a CAR approval letter. If you have any questions concerning this matter, please contact me at (407) 893-3331.

Yours truly,

James B. Russell, P.E.
