RE: Safety-Kleen (Sanford, FL) Non-Regulated Waste Operational Change

Dear Mrs. Burson,

I would like to notify your department about upcoming operational changes for handling two non-regulated waste streams. We will be removing the two temporary Baker tanks currently on-site which were used to store antifreeze and industrial non-haz wastewater. Due to high transportation cost we are no longer using rail cars and the purpose of the temporary tanks were to provide an interim solution of handling these waste streams.

Moving forward, we will be installing a double walled 20,000-gallon tank to store reclaimable ethylene glycol, destined for Georgia Petroleum or a comparable approved glycol recovery facility. This tank will not hamper current containment volumes, the tank will be free standing and not located in our tank farm. The tank should be installed by the end of April.

IWS will be providing a tanker for our industrial non-haz wastewater. We will be staging the tanker in the back loading dock containment area. Once the tanker is full, IWS will exchange the full tanker with an empty.

If you have any questions regarding these operations, please feel free to contact me at (813) 340-0976.

Sincerely,

Matt Hedrick
Safety-Kleen Corp. EHS Manager

Cc. Cindy Bruce (Safety-Kleen- Sanford)
