**RE: Southeast County Landfill
Laboratory Analytical Sampling Results
Initial Assessment Monitoring Plan
Report No. 3**

Dear Mr. Morris:

The Hillsborough County Public Utilities Department (PUD) is pleased to provide the analytical results from the sampling events conducted as part of the continuation of the Initial Assessment Monitoring Plan (IAMP). The IAMP was developed to address any potential impacts to groundwater from the sinkhole in Phase VI of the Southeast County Landfill (SCLF), which was discovered on December 14, 2010. This report provides the analytical results from three weeks of sampling at the SCLF. The data from these events was provided by Test America on February 10, 2011.

Sampling Event – January 13-14, 2011

On January 13-14, representative groundwater samples were collected from seven (7) on site groundwater monitoring wells and two on-site limited use potable supply wells. The samples were analyzed for total dissolved solids (TDS), chloride, total ammonia, arsenic, cadmium, chromium, iron, lead, sodium, and five field parameters. The four surficial aquifer monitoring wells indicate water quality consistent with the historical data for each of the wells sampled. The three upper Floridan aquifer monitoring wells indicate water quality consistent with the historical data set for the site, with the exception of TH-42. However, this well

Mr. John Morris, P.G.
February 17, 2011
Page 2

exhibited iron and lead above their respective drinking water standards, but the turbidity value was recorded at 175.1 Nephelometric Turbidity Units (NTU). High turbidity is known to generate false positive readings for metals, as the entrained sediments in the sample are dissolved by the acidic preservative, creating a potential turbidity associated bias. The data from this sampling event indicates there is no apparent impact to groundwater from the sinkhole.

Sampling Event – January 20-21, 2011

On January 20-21, representative groundwater samples were collected from nine (9) on site groundwater monitoring wells and two on-site limited use potable supply wells. The samples were analyzed for total dissolved solids (TDS), chloride, total ammonia, arsenic, cadmium, chromium, iron, lead, sodium, and five field parameters. The two new monitoring wells identified as TH-72 and TH-73, which were installed directly west of the sinkhole area, were included in the nine (9) on-site monitoring wells sampled. The representative samples collected from TH-72 and TH-73 were analyzed for the parameters listed in Specific Condition #E.4.c of the Operations permit 35345-014-SO/01, as required for new monitoring wells.

During the January 20-21 sampling event, arsenic and lead values in TH-73 were very low at concentrations of 0.0021 mg/l and 0.00045 mg/l, respectively. TDS and chlorides were observed at 66 and 200 mg/l, respectively, which is consistent with the historical water quality within the wells along the western perimeter of Phases I-VI. However, semi-volatile organic constituent bis (2-ethylhexyl) phthalate or DHEP was detected in TH-73. This constituent was observed at a concentration of 7.9 mg/l which exceeds the PDWS of 6.0 mg/l. The PUD believes the DHEP is not attributable to the sinkhole, as the leachate collected from that area of the landfill in Sump 001 does not exhibit any detectable concentrations that can be correlated to these results. DHEP is widely used as a plasticizer in the manufacturing of PVC materials, and is not uncommon in the initial sampling of some groundwater monitoring wells. Additionally, TH-73 also exhibited toluene and total xylenes at 1.3 and 1.9 ug/l, which are both several orders of magnitude below their applicable standards. The PUD will continue to evaluate these detections and will have the next round of samples collected from TH-73 analyzed for both EPA methods 8270 and 8260 to evaluate the validity of these initial results.

The data from TH-42 continues to exhibit elevated turbidity, and the reported values for iron and lead are likely attributable to the potential turbidity associated bias. Based on these observations, the data from this sampling event indicates there is currently no impact to groundwater attributable to the sinkhole within the upper Floridan aquifer.

Sampling Event – January 27-28

The supply well at the Maran Groves maintenance facility was originally scheduled to be sampled as part of Phase III of the IAMP. However, electrical problems prevented sampling of this supply well at the time the four Maran Groves irrigation supply wells were sampled. The electrical problems have been resolved, and the Maran Groves maintenance facility supply well was included in the sampling event conducted on January 27-28, 2011.

Representative groundwater samples were collected from the nine (9) on-site groundwater monitoring wells, the two on site limited use potable supply wells, and the Maran Groves maintenance facility supply well. The samples were analyzed for total dissolved solids (TDS), chloride, total ammonia, arsenic, cadmium, chromium, iron, lead, sodium, and five field parameters. The water quality observed within the on-site groundwater monitoring wells, two on site supply wells and the Maran Groves supply well show no apparent impact from the sinkhole.

Lead continued to exceed its respective standards in the upper Floridan aquifer groundwater monitoring well, TH-42. However, as discussed, it is readily apparent that the elevated turbidity and entrained sediments are creating the potential turbidity associated bias in the samples collected. Additionally, the location of TH-42 is over 1500 feet directly up-gradient of the sinkhole. The PUD maintains the position that the metals detected are in no way attributable to the sinkhole or the landfill.

A groundwater contour diagram depicting elevations and direction of flow within the upper Floridan aquifer has been prepared from the water level data collected on February 1, 2011. TH-42 is the highest elevation of the four data points utilized to create this contour diagram, which indicates that it is directly up-gradient of the sinkhole at a significant distance of greater than 1500 ft. This physical relationship supports the position that TH-42 provides no specific value to assessing potential water quality impacts from the sinkhole. The well remains valuable as a groundwater elevation data point to continue the evaluation of the direction of flow within upper Floridan as we move forward with the assessment and remediation work.

Additionally, turbidity problems were also encountered in the P-18S, which was originally installed as a groundwater elevation data point or piezometer in area with a substantial amount of clay in the subsurface. This data point was included as part of the IAMP, at the request of FDEP, based on location in relation to the sinkhole. During discussions with FDEP, it was agreed that our sampling team would continue their efforts to develop P-18S. If turbidity readings of less than 20 NTU could not be obtained, the sample would be collected from TH-30. Turbidity values have not been sufficiently reduced in P-18S. Therefore, over the past two weekly sampling events, the sample was collected from TH-30.

Mr. John Morris, P.G.
February 17, 2011
Page 4

Based on these observations, it is recommended that TH-30 replace P-18S in the future IAMP sampling events.

Weekly groundwater and surface water elevations were recorded on January 10, January 18, and January 25, 2011, and the data summary tables and contour flow diagrams for the three weeks have been prepared and included, as requested. The direction of flow within the surficial aquifer is consistent with the historical data, and the general direction of flow is from the southeast to the west / northwest. As discussed, a flow diagram has been prepared for the upper Floridan aquifer for the site. The direction of flow within the upper Floridan is from the north to the southwest

Conclusions

Based on the groundwater data collected and evaluated to date, it is readily apparent that there is no impact to the upper Floridan aquifer in any well at or around the landfill property. The water quality in TH-72, immediately adjacent to the sinkhole, indicates there is no downward migration of contamination into the upper Floridan aquifer. There is no apparent impact to the surficial aquifer wells along the western perimeter of Phases I-VI of the landfill, and the minor detections of volatile organic compounds in TH-73, immediately adjacent to the sinkhole, will continue to be evaluated.

Recommendations

The PUD recommends that the sampling frequency be reduced from weekly to monthly beginning March 1, 2011, as work continues on all the activities associated with assessing the impacts from and remediating the sinkhole. The reporting schedule would remain the same, in that each report detailing the findings from an IAMP sampling event shall be submitted within seven days of our receipt of the laboratory data reports, as requested by FDEP.

Based on the direction of flow within the upper Floridan aquifer and the problems with elevated turbidity, the PUD further recommends that the sampling of TH-42 be discontinued. The monthly monitoring plan shall include the eight (8) on-site monitoring wells, TH-19, TH-28, TH-30, TH-40, TH-57, TH-58, TH-72, and TH-73, and the two limited use potable supply wells, SUP-1 and SUP-2.

Enclosed for your review please find a site location map depicting the on site wells, a supplemental site map depicting the location of the Maran Grove maintenance supply well in relation to the supply wells at the Southeast County Landfill and the sinkhole, the water quality data summary tables for each of the three sampling events, three groundwater elevation data tables and the associated contour flow diagrams, and the complete analytical reports from our contracted laboratory, Test America.

ANALYTICAL REPORT

Job Number: 660-39231-1

Job Description: Southeast Landfill

For:
Hillsborough County
Solid Waste Management Department
601 East Kennedy Blvd
24th Floor County Center
Tampa, FL 33601

Attention: Mr. David S Adams

Approved for release:
Nancy Robertson
Project Manager II
1/25/2011 2:56 PM

Nancy Robertson
Project Manager II
nancy.robertson@testamericainc.com
01/25/2011
Revision: 1

cc: Mr. Jim Clayton
Mr. Michael Townsend

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

TestAmerica Laboratories, Inc.

TestAmerica Tampa 6712 Benjamin Road, Suite 100, Tampa, FL 33634
Tel (813) 885-7427 Fax (813) 885-7049 www.testamericainc.com

**Job Narrative
660-39231-1**

Comments

No additional comments.

Receipt

All samples were received in good condition within temperature requirements.

Metals

Method 6010B: Samples TH-42 and P-18S had positive results for lead. The samples had high field turbidity and sediment at the bottom of the metals bottles received in the laboratory. Normally, to confirm results, the analyst takes sample from the original bottle received (not the digested sample) and runs it directly on the instrument. Because this sample had sediment, it was filtered and analyzed directly on the instrument. The results for lead were non detect. We re-digested and analyzed the samples and confirmed the original digested results. From this, we can conclude that the sediment attributed to the digested results.

No analytical or quality issues were noted.

General Chemistry

Method 300.0: The Matrix spike/ matrix spike duplicate (MS/MSD) for batch 105342 was reported over the calibration curve for chloride. The data is qualified.

No other analytical or quality issues were noted.

EXECUTIVE SUMMARY - Detections

EXECUTIVE SUMMARY - Detections

Client: Hillsborough County

Job Number: 660-39231-1

Lab Sample ID Analyte	Client Sample ID	Result / Qualifier	Reporting Limit	Units	Method
660-39250-3	TH-58 WACS# 1571				
Field pH	5.78			SU	Field Sampling
Field Temperature	25.58			Degrees C	Field Sampling
Oxygen, Dissolved	0.46			mg/L	Field Sampling
Specific Conductance	736			umhos/cm	Field Sampling
Turbidity	0.2			NTU	Field Sampling
Chloride	130		5.0	mg/L	300.0
Ammonia as N	0.61		0.020	mg/L	350.1
Total Dissolved Solids	390		5.0	mg/L	SM 2540C
<i>Total Recoverable</i>					
Arsenic	31		10	ug/L	6010B
Chromium	2.9	I	10	ug/L	6010B
Iron	5000		200	ug/L	6010B
Sodium	26		0.50	mg/L	6010B
660-39250-4	DUPLICATE				
Chloride	44		0.50	mg/L	300.0
Ammonia as N	1.0		0.020	mg/L	350.1
Total Dissolved Solids	100		5.0	mg/L	SM 2540C
<i>Total Recoverable</i>					
Arsenic	5.3	I	10	ug/L	6010B
Chromium	2.5	I	10	ug/L	6010B
Iron	2500		200	ug/L	6010B
Sodium	17		0.50	mg/L	6010B

METHOD SUMMARY

Client: Hillsborough County

Job Number: 660-39231-1

Description	Lab Location	Method	Preparation Method
Matrix Water			
Metals (ICP)	TAL TAM	SW846 6010B	
Preparation, Total Recoverable or Dissolved Metals	TAL TAM		SW846 3005A
Anions, Ion Chromatography	TAL TAM	MCAWW 300.0	
Nitrogen, Ammonia	TAL TAM	MCAWW 350.1	
Solids, Total Dissolved (TDS)	TAL TAM	SM SM 2540C	
Field Sampling	TAL TAM	EPA Field Sampling

DATA REPORTING QUALIFIERS

Client: Hillsborough County

Job Number: 660-39231-1

<u>Lab Section</u>	<u>Qualifier</u>	<u>Description</u>
Metals		
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
General Chemistry		
	U	Indicates that the compound was analyzed for but not detected.
	L	Off-scale high. Actual value is known to be greater than the value given.

Login Sample Receipt Check List

Client: Hillsborough County

Job Number: 660-39231-1

Login Number: 39231
Creator: Harrison, Amanda
List Number: 1

List Source: TestAmerica Tampa

Question	T / F / NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	4.2 degrees C CU-07
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

ANALYTICAL REPORT

Job Number: 660-39345-1

Job Description: Southeast Landfill

For:
Hillsborough County
Solid Waste Management Department
601 East Kennedy Blvd
24th Floor County Center
Tampa, FL 33601

Attention: Mr. David S Adams

Approved for release:
Nancy Robertson
Project Manager II
2/8/2011 12:30 PM

Nancy Robertson
Project Manager II
nancy.robertson@testamericainc.com
02/08/2011

cc: Mr. Jim Clayton
Mr. Michael Townsel

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282
TestAmerica Tallahassee E81005
TestAmerica Savannah E87052

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

**Job Narrative

Comments

No additional comments.

Receipt

All samples were received in good condition within temperature requirements.

GC/MS VOA

Method 8260B: A full list spike was utilized for this method. Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for 5 analytes to recover outside criteria. The LCS and MS associated with batch 105610 had Acetone and Acrolein outside control limits. The associated samples are flagged with J3.

Method 8260B: A full list spike was utilized for this method. Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for 5 analytes to recover outside criteria. The LCS associated with batch 105700 had Acetone and Acrolein outside control limits. The associated samples are flagged with J3.

Method 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 105700 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

No other analytical or quality issues were noted.

GC/MS Semi VOA

Method 8270C: A full list spike was utilized for this method. Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for 5 analytes to recover outside criteria. The LCS and MS associated with batch 105496 had 2-Nitroaniline. The associated samples are flagged with J3.

Method 8270C LL: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 105699 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.
The sample is flagged with J3.

No other analytical or quality issues were noted.

GC Semi VOA

Method 8011: The matrix spike (MS) recoveries for batch 105974 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria. The sample is flagged with J3.

Method 8082: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for aroclor 1260 for batch 106095 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria. The sample is flagged with J3.

Method 8081A: Per TA SOP, at least one of the surrogate recoveries was in control on sample TH-73. The sample is flagged with J1.

Method 8151A: The surrogate recovery for sample TH-72 was outside control limits. A re-extraction and re-analysis was performed and the recoveries indicated acceptable method performance. Both sets of data were comparable and are included in this report. The re-extraction for confirmational purposes was performed after the EPA recommended holding time had been exceeded. The re extract is flagged with Q.

No other analytical or quality issues were noted.

Metals

Method 6010B: Samples TH-42 and P-18S had positive results for lead. The samples had high field turbidity and sediment at the bottom of the metals bottles received in the laboratory. The sample results were the same as the results sampled on 1.13.2011. Due to this fact, re analysis was not performed. We can conclude that the sediment attributed to the sample result.

No analytical or quality issues were noted.

General Chemistry

Method 300.0: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 105611and 105623 were outside control limits for chloride. The associated laboratory control sample (LCS) recovery met acceptance criteria.

Method 350.1: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 105564 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

No other analytical or quality issues were noted.

Organic Prep

Method 3520C: Insufficient sample volume was provided to perform batch matrix spike/matrix spike duplicate (MS/MSD) associated with batch 105740. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

No other analytical or quality issues were noted.

DATA REPORTING QUALIFIERS

Client: Hillsborough County

Job Number: 660-39345-1

Lab Section	Qualifier	Description
GC/MS VOA	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
GC/MS Semi VOA	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
GC Semi VOA	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	J1	Estimated value; value may not be accurate. Surrogate recovery outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	Q	Sample held beyond the accepted holding time.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
Metals	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

Question	T / F / NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.		
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VCA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Laboratory Analytical Data Report
January 27-28, 2011

ANALYTICAL REPORT

Job Number: 660-39479-1

Job Description: Southeast Landfill

For:
Hillsborough County
Solid Waste Management Department
601 East Kennedy Blvd
24th Floor County Center
Tampa, FL 33601

Attention: Mr. David S Adams

Approved for release
Nancy Robertson
Project Manager II
2/8/2011 12:48 PM

Nancy Robertson
Project Manager II
nancy.robertson@testamericanainc.com
02/08/2011

cc: Mr. Jim Clayton
Ms. Michael Toombs

Methods: FDEP, DOH Certification #: TestAmerica Tampa E84282

These test results meet all the requirements of NELAC unless specified in the case narrative. All questions regarding this test report should be directed to the TestAmerica Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request. The results contained in this test report relate only to these samples included herein.

**Job Narrative
660-39479-1**

Comments

No additional comments.

Receipt

All samples were received in good condition within temperature requirements.

Metals

Method 6010B: Samples TH-42 and P-18S had positive results for lead. The samples had high field turbidity and sediment at the bottom of the metals bottles received in the laboratory. The sample results were the same as the results sampled on 1.20.2011. Due to this fact, re analysis was not performed. We can conclude that the sediment attributed to the sample result.

Sample TH-42 was collected in properly preserved bottles, however, the pH was outside the required criteria when verified by the laboratory. The analyst adjusted the pH.

Method 6010B: The matrix spike duplicate (MSD) recovery for iron in batch 105893 was outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria. The sample is flagged with J3.

No other analytical or quality issues were noted.

General Chemistry

Method 300.0: The MS/MSD was reported over the calibration range for chloride. Batch 105894

Method 350.1: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 105862 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria. The sample is flagged with J3.

No other analytical or quality issues were noted.

EXECUTIVE SUMMARY - Detections

DATA REPORTING QUALIFIERS

Client: Hillsborough County

Job Number: 660-39479-1

<u>Lab Section</u>	<u>Qualifier</u>	<u>Description</u>
Metals		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
General Chemistry		
	J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
	U	Indicates that the compound was analyzed for but not detected.
	L	Off-scale high. Actual value is known to be greater than the value given.

Job Number: 660-39479-1

Login Number: 39479
Creator: Harrison, Amanda
List Number: 1

List Source: TestAmerica Tampa

Question	T / F / NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	4.8 degrees C CU-07
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True
