RE: EMERGENCY PROCEDURES

Dear Mr. Bagley,

Following our conversation I am writing to make you aware of an element of our Emergency Plan developed to address the improbable possibility of a fire at our property.

As I explained, FLORIDA TIRE RECYCLING, INC. (FTR) immediately abuts property owned and controlled by ALLIED CHEMICAL CORPORATION (ALLIED) which has constructed a private railroad spur on its land and adjacent to our common boundary. Periodically, ALLIED parks railroad tank cars containing chemicals on this spur.

In the event of a fire, management at ALLIED has given us authority to move those cars along its private spur and away from any danger (see enclosed letter from ALLIED).

Thus, in the event of an emergency and only in the event of an emergency tank cars parked adjacent to our property would be moved away from the source of the emergency (fire), but at no time would these cars be located on your main line.

Please call if you require additional information regarding our plan to minimize the potential for damage or injury.

Sincerely,

Skip Robinson

Skip Robinson
