CC: Joe Lurix, DEP, West Palm Beach

DEPT OF ENV PROTECTION  
WEST PALM BEACH

RE: FLORIDA TIRE RECYCLING, INC - SURVEYOR REPORT/ANALYSIS

Per your specific request, attached are three sets of the following documents related to the Florida Tire Recycling, Inc site:

- (1) A topographical survey initiated by Allen E. Beck Professional Land Surveyors on September 28, 1994 under subcontract to T.A.G. Resource Recovery as you requested.
- (2) A boundary survey conducted by the same surveyor prior to initiation of the above topographical survey.
- (3) An earlier site topographical survey used by Beck to establish ground conditions for volume estimates dispersed across the property.
- (4) The surveyor's letter report defining volumes of waste tires/shreds contained on the site based on the above topographical survey. Pile volumes were computer-calculated based on surveyed pile dimensions from the toe of piles. Ground level shred estimates were also computer-generated by comparison of current elevations to those in the earlier survey.
- (5) Originals of reports prepared by T.A.G. Resource Recovery defining quantities and dimensional conformance with DEP regulations based on the above boundary and topographical surveys and report.
- (6) A copy of an advertisement appearing in "Scrap Tire News" (Volume 6, Number 11, November, 1994, page 4) indicating their interest in acquiring southeastern scrap tire collection companies to merge with their "rapidly expanding collection and recycling business."

A copy of this letter and set of documents has been sent directly to Joe Lurix as you requested.
