SECTION 12.0 - WTE FACILITIES

Requirements:

The requirements listed in this section provide an opportunity for the Department's inspector to indicate the conditions found at the time of the inspection. A "Not Ok" response to a requirement indicates either a potential violation of the corresponding rule or an area of concern that requires more attention. Both potential violations and areas of concern are discussed further at the end of this inspection report.

Item No.	WTE FACILITY OPERATION AND MAINTENANCE Completed	Ok	Not Ok	Unk	N/A
12.7	WTE facility in compliance with all permit conditions, site certification conditions, Department order, or certification, if any, and applicable requirements? 62-701.320(1), 403.161, F.S.		✓		

Current Areas Of Concern:

Rule: 403.161, 62-701.320(1)

Question Number: 12.7

Explanation: Department staff observed ponded water at the entrance to the ash building. Water had accumulated along the north curb, but had not backed up outside of the containment. The facility had pulled the sump pump to investigate the cause of the pump failure. Prior to inspection, a fast-moving cold front produced about 1" of rain in about 30 minutes creating a major influx of water on the system. The water was slowing draining to the next sump as a result of the hydraulic pressure from the higher, over-flowing sump.

Water and ash was observed inside the area immediately adjacent to the re-use sump due to overflowing trench drains. This area appeared to be adequately contained and flow back into the re-use sump.

Corrective Action: The facility should continue to conduct periodic inspections of sumps and trench drains to ensure proper working pumps and free flowing drains in the event of heavy rainfall or spills.

The Department received documentation (via email) that the sump pump was operable and that accumulated water had been pumped down by COB on the day of the inspection.
