Item 1.7 - Monitoring results pending Dept review

Inspection Date: 01/25/2012

02/10/2012

Item #2.22 - The leachate cleanout on east side of Phase 2 is no longer straight down the interior slope of Phase 2. According the landfill manager, the cleanout has been realligned by settlement and/or thermal expansion/contraction, the cleanout still functions as designed and is re-straightened as filling proceeds up the slope, but it may need to be repaired (e.g. lengthened or shortened) as neccessary as filling nears top of slope. The Department should be notified if such repairs are needed or in the event the cleanout no longer functions as designed.

02/10/2012

Items #2.37 - Not all monitoring wells were inspected during site visit.

02/10/2012

Item #2.29 - According to landfill manager, ponding of stormwater over rain cell cover in Phase 3 is due to inability of pump to collect bottom few inches of water. Water level should be monitored on a regular basis and minimized to avoid excess leachate generation.
