## SECTION A

|  | FOR AGENCY USE ONLY |
| :--- | :--- |
| ACOE Application \# | DEP/WMD Application \# |
| Date Application Received | Date Application Received |
| Proposed Project Lat. | Fee Received \$ |
| Proposed Project Long. | Fee Receipt \# |

PART 1:
Are any of the activities described in this application proposed to occur in, on, or over wetlands or other surface waters? $\square$ yes $\boxtimes$ no
Is this application being filed by or on behalf of a government entity or drainage district? $\square$ yes $\boxtimes$ no
A. Type of Environmental Resource Permit Requested (check at least one). See Attachment 2 for thresholds and descriptions.
$\square$ Noticed General - include information requested in Section B.
$\square \quad$ Standard General (Single Family Dwelling) - include information requested in Sections C and D.
$\boxtimes \quad$ Standard General (all other Standard General projects) - include information requested in Sections C and E.
$\square \quad$ Individual (Single Family Dwelling) - include information requested in Sections C and D. Individual (all other Individual projects) - include information requested in Sections C and E.
$\square \quad$ Conceptual - include information requested in Sections $C$ and $E$.
$\square \quad$ Mitigation Bank Permit (construction) - include information requested in Sections C and F. (If the proposed mitigation bank involves the construction of a surface water management system requiring another permit defined above, check the appropriate box and submit the information requested by the applicable section.)
$\square \quad$ Mitigation Bank (conceptual) - include information requested in Sections C and F.
B. Type of activity for which you are applying (check at least one)
$\square \quad$ Construction or operation of a new system, other than a solid waste facility, including dredging or filling in, on or over wetlands and other surface waters.
$\square \quad$ Construction, expansion or modification of a solid waste facility.
$\square \quad$ Alteration or operation of an existing system which was not previously permitted by a WMD or DEP.
$\boxtimes \quad$ Modification of a system previously permitted by a WMD or DEP.
Provide previous permit numbers: FDEP \#48-0187635-002-EM and 48-0187635-003-EM $\square$ Alteration of a system $\square$ Extension of permit duration $\square$ Abandonment of a system $\square$ Construction of additional phases of a system $\quad \square$ Removal of a system
C. Are you requesting authorization to use Sovereign Submerged Lands?
$\square$ yes $\boxtimes$ no
(See Section G and Attachment 5 for more information before answering this question.)
D. For activities in, on, or over wetlands or other surface waters, check type of federal dredge and fill permit requested:

| $\square$ Individual | $\square$ Programmatic General | $\square$ General |
| :--- | :--- | :--- |
| $\square$ Nationwide | $\square$ Not Applicable |  |

E. Are you claiming to qualify for an exemption? $\square$ yes $\boxtimes$ no

If yes, provide rule number if known.

| PART 5: |  |  |

|  | $\underline{12 / 11 / 02}$ | $\underline{48-01786735-003 E M}$ | $\underline{\text { issued }}$ |  |

C. Note: The following information is required for projects proposed to occur in, on or over wetlands that need a federal dredge and fill permit or an authorization to use state owned submerged lands. Please provide the names, addresses and zip codes of property owners whose property directly adjoins the project (excluding application) and/or (for proprietary authorizations) is located within a 500 ft . radius of the applicant's land. Please attach a plan view showing the owner's names and adjoining property lines. Attach additional sheets if necessary.

PART 8:
A. By signing this application form, I am applying, or I am applying on behalf of the applicant, for the permit and any proprietary authorizations identified above, according to the supporting data and other incidental information filed with this application. I am familiar with the information contained in this application and represent that such information is true, complete and accurate. I understand this is an application and not a permit, and that work prior to approval is a violation. I understand that this application and any permit issued or proprietary authorization issued pursuant thereto, does not relive me of any obligation for obtaining any other required federal, state, water management district or local permit prior to commencement of construction. I agree, or I agree on behalf of the applicant, to operate and maintain the permitted system unless the permitting agency authorizes transfer of the permit to a responsible operation entity. I understand that knowingly making any false statement or representation in this application is a violation of Section 373.430, F.S. and 18 U.S.C. Section 1001.

Chris Schumacher, P.E.
Typed/Printed Name of Applicant (If no Agent is used) or Agent (If one is so authorized below)

Signature of Applicant/Agent

December 31, 2010
Date
(Corporate Title if applicable)

## AN AGENT MAY SIGN ABOVE ONLY IF THE APPLICANT COMPLETES THE FOLLOWING:

B. I hereby designate and authorize the agent listed above to act on my behalf, or on behalf of my corporation, as the agent in the processing of this application for the permit and/or proprietary authorization indicated above; and to furnish, on request, supplemental information in support of the application. In addition, I authorize the above-listed agent to bind me, or my corporation, to perform any requirements which may be necessary to procure the permit or authorization indicated above. I understand that knowingly making any false statement or representation in this application is a violation of Section 373.430, F.S. and 18 U.S.C. Section 1001.

## Vice President, Waste Management Inc. of Florida

(Corporate Title if applicable)

## Please note: The applicant's original signature (not a copy) is required above,

## PERSON AUTHORIZING ACCESS TO THE PROPERTY MUST COMPLETE THE FOLLOWING:

C. I either own the property described in this application or I have legal authority to allow access to the property, and I consent, after receiving prior notification, to any site visit on the property by agents or personnel from the Department of Environmental Protection, the Water Management District and the U.S. Army Corps of Engineers necessary for the review and inspection of the proposed project specified in this application. I authorize these agents or personnel to enter the property as many times as may be necessary to make such review and inspection. Further, I agree to provide entry to the project site for such agents or personnel to monitor permitted work if a permit is granted.

## ERP QUESTIONS AND RESPONSES

## Section C: Questions 1 through 6

1. Indicate the project boundaries on a USGS quadrangle map. Attach a location map showing the boundary of the proposed activity. The map should also contain a north arrow and a graphic scale; show Section(s), Township(s), and Range(s); and must be of sufficient detail to allow a person unfamiliar with the site to find it.

A project location map with the property boundaries is shown on Figure C-1. The project is located in Section 28, Township 21 South, Range 28 East in Apopka, Florida. The site is located on the south side in the City of Apopka. The City of Apopka is located in northwest portion of Orange County, Florida.
2. Provide the names of all wetlands, or other surface waters that would be dredged, filled, impounded, diverted, drained, or would receive discharge (either directly or indirectly), or would otherwise be impacted by the proposed activity, and specify if they are in an Outstanding Florida water or Aquatic Preserve:

As per the previous Florida Department of Environmental Protection (FDEP) and City of Apopka and Orange County Environmental Protection Department permit applications, the landfill footprint does not encroach into wetlands or other surface waters.
3. Attach a depiction (plan and section views), which clearly shows the works or other facilities proposed to be constructed. use multiple sheets, if necessary. use a scale sufficient to show the location and type of works.

Please refer to the half size drawing Figures C-2A through C-2H for plan, profile and detail drawings of the grading works and storm water management facilities for the interim (5-year) plan and final buildout conditions.
4. Briefly describe the proposed project (such as "construct a deck with boat shelter", "replace two existing culverts", "construct surface water management system to serve 150-acre residential development"):

Construct a reconfigured and phased storm water management system for a Class III landfill interim 5-year plan and closure plan at the Vista Landfill.
5. Specify the acreage of wetlands or other surface waters, if any, that are proposed to be disturbed, filled, excavated, or otherwise impacted by the proposed activity:

There is no wetland or other surface water impacts for the construction of the landfill and the associated storm water management system.
6. Provide a brief statement describing any proposed mitigation for impacts to wetlands and other surface waters (attach additional sheets if necessary):

Wetland mitigation is not applicable since there are no wetland impacts.

## ERP QUESTIONS AND RESPONSES

Section E: Questions I through VII

## I. Site Information

A. Provide a map(s) of the project area and vicinity delineating USDA/SCS soil types.

Please refer to Figure E-1 and Table 1 for a soil type location map of the site with the tabulated physical soil characteristics and soil and water features tables as taken from The Soil Conservation Service Soil Survey for Orange County.
B. Provide recent aerials, legible for photointerpretation with a scale of 1 inch $=400$ feet, or more detailed, with project boundaries delineated on the aerial.

Please refer to Figure E-2 for an aerial of the landfill photographed on December 12, 2009 at an approximate scale of 1" $=400$ '.
C. Identify the seasonal high water or mean high tide elevation and normal pool or mean low tide elevation for each on site wetland or surface water, including receiving waters into which runoff will be discharged. Include dates, datum, and methods used to determine these elevations.

This question is not applicable since the storm water management system will be dry retention with no surface discharge into wetlands or surface waters
D. Identify the wet season high water tables at the locations representative of the entire project site. Include dates, datum, and methods used to determine these elevations.

The wet season high water table elevations are taken from the historical water levels and records of previous permit applications as documented in the new Geotechnical Report entitled "Report on Review OF SHWT and Aquifer Parameters for Stormwater Management System Design" prepared by Devo Engineering attached in Appendix B. From the attached report, the seasonal high surficial water table elevation ranges from a high of elevation 85 to a low of elevation 60 NGVD-29. Also, the following table lists the pond bottoms and the estimated seasonal high ground water elevations at the existing and proposed pond locations as per the recommendations summarized on Table 3 on Page 7 in the attached Geotechnical Report by Devo Engineering.
Pond Bottom

| :--- | :---: | :---: |
| Pond 2 (existing) | 70.0 | 60.0 |
| Pond 3 (existing) | 90.0 | 85.0 |
| Pond 4 | 82.0 | 60.0 |
| Pond 5 | 72.0 | 60.0 |
| Pond 6 | 85.0 | 67.0 |
| Pond 7 | 102.0 | 85.0 |
| Pond 8 | 92.0 | 77.0 |
| Pond 9 | 78.0 | 74.0 |
| Pond 10 | 82.0 | 79.0 |
| Pond 11 | 80.0 | 60.0 |
| Pond 12 | 71.0 | 62.0 |

## II. Environmental Considerations

A. Provide results of any wildlife surveys that have been conducted on the site, and provide any comments pertaining to the project from the Florida Game and Fresh Water Fish Commission and U. S. Fish and Wildlife Service.

Since the landfill is an existing, ongoing operation, this question is not applicable to this permit renewal.
B. Provide a description of how water quantity, quality, hydroperiod, and habitat will be maintained in on-site wetlands and other surface waters that will be preserved or will remain undisturbed.

The dry retention systems do not adversely affect the groundwater water table or the existing wetland water tables in the offsite Lake Cora wetland treatment project. The pond bottoms are all set above at a minimum of 3 feet above the average seasonal high groundwater elevations for the site.
C. Provide a narrative description of any proposed mitigation plans, including purpose, maintenance, monitoring, and construction sequence and techniques, and estimated costs.

This issue does not apply to the site since there is no wetland encroachment proposed with this modification application.
D. Describe how boundaries of wetlands or other surface waters were determined. If there has ever been a jurisdictional declaratory statement, a formal wetland determination, a formal determination, a validated informal determination, or a revalidated jurisdictional determination, provide the identifying number.

The boundary of the lone offsite created wetland (Lake Cora wetland treatment project) was determined in previous FDEP and Orange County permit applications by others and is documented in the Geotechnical Report

## by Devo Engineering (Appendix B).

## III. Plans

Provide clear detailed plans for the system including specifications, plan (overhead) views, cross sections (with the locations of the cross sections shown on the corresponding plan view), and profile (longitudinal) views of the proposed project. The plans must be signed and sealed by an appropriate registered professional as required by law. Plans must include a scale and a north arrow. These plans should show the following:
A. Project area boundary and total land area, including distances and orientation from roads or other land marks;

Please refer to the boundary and topographic survey flown and prepared by Techmap on Deember 21, 2009, located on the last page of the full-sized construction drawings in Appendix A for the previously established site dimensions and existing topography. The total land area owned for the parcel is 150.6 acres. A site aerial topographical survey was flown on December 8, 2009 by Techmap and is referenced to both McQueen and Keene Roads.
B. Existing land use and land cover (acreage and percentages); and on-site natural communities, including wetlands and other surface waters, aquatic communities, and uplands. Use the Florida Land Use Cover and Classification System (FLUCCS) (Level 3) for projects proposed in the South Florida Water Management District and use the National Wetlands Inventory (NWI) for projects proposed in the Southwest Florida Water Management District. Also identify each community with a unique identification number, which must be consistent in all exhibits.

As per the previous permit applications, the only existing (natural) community onsite that has not been altered by landfill activities are the existing pine trees on the southern half of the site (southwest corner), with a FLUCCS Code of 441, coniferous plantations. The vast majority of the site is in a state of filling and is represented as disturbed, open lands, with a FLUCCS code of 194 or storm water ponds at FLUCCS code 166. Please refer to the existing (predeveloped) FLUCCS Code map shown on Figure E-3.
C. The existing topography extending at least 100 feet off the project area, and including adjacent wetlands and other surface waters. All topography shall include the location and a description of known benchmarks, referenced to NGVD. For systems waterward of the mean high water (MHW) or seasonal high water lines, show water depths, referenced to mean low water (MLW) in tidal areas or seasonal low water in non-tidal areas, and list the range between MHW and MLW. For docking facilities, indicate the distance to, location of, and depths of the nearest navigational channel and access routes to the channel.

A digitized copy of the aerial topographical survey performed on December 21, 2009 by Techmap, is underlain on Drawings 2 through 5 of 9 and presented as a stand-alone survey on the last page of the full-size plan drawings located in Appendix A.
D. If the project is in the known flood plain of a stream or other water course, identify the flood plain boundary and approximate flooding elevations; identify the 100-year flood elevation and flood plain boundary of any lake, stream or other watercourse
located on or adjacent to the site;
As presented in previous permit applications, the site is located outside of the 100 -year floodplain. This area is designated as Flood Zone " $X$ ". This area lies outside the 100-year flood zone as per FEMA Flood Insurance Rate Map Number 12095C0120F, panel 120 of 750, of Orange County, Florida, issued September 25, 2009. Please refer to Figure E-4 for a FEMA FIRM Map of the project area.
E. The boundaries of wetlands and other surface waters within the project area. Distinguish those wetlands and other surface waters that have been delineated by any binding jurisdictional determination;

There are no wetlands or surface waters on the project site.
F. Proposed land use, land cover, and natural communities (acreage and percentages), including wetlands and other surface waters, undisturbed uplands, aquatic communities, impervious surfaces, and water management areas. Use the same classification system and community identification number used in III (B) above.

As in previous permit applications, the proposed land uses are the following: 166 - holding ponds, 834 - landfills, and 194 - open land/buffer.

The percentages of the land uses are as follows:
Stormwater ponds 36.5 acres (24\%) FLUCCS = 166
Landfill Area 103.1 acres (68\%) FLUCCS $=835$
Open Areas $\quad 11$ acres (8\%) FLUCCS = 194
Please refer to the proposed (post developed) FLUCCS Code Map shown on Figure E-5.
G. Proposed impacts to wetlands and other surface waters, and any proposed connections/outfalls to other surface waters or wetlands;

This issue is not relevant to the site.
H. Proposed buffer zones;

The City of Apopka land development requirements mandate a 100-foot no-waste setback around the perimeter of the landfill. This area is comprised of buffer landscaping and retention ponds.
I. Pre- and post-development drainage patterns and basin boundaries showing the direction of flows, including any off-site runoff being routed through or around the system; and connections between wetlands and other surface waters;

The pre-developed drainage patterns are shown on the topographic survey at the end of the construction plans. The storm water management system at the Vista Landfill is designed for total retention, with no surface discharge. The post-development drainage patterns are presented on the contributing drainage sub-basin map and final grading plans presented in Drawings 2 through 5 of 9, located in Appendix A. Please note that the drainage system is
designed as dry retention with no offsite discharge from the retention ponds for the 25-yearl 24-hour and the 100-year / 24-hour design storms.
J. Location of all water management areas with details of size, side slopes, and designed water depths;

Drawings 2, 3, and 6, located in Appendix A contain the location and dimensions of all water management facilities with design high water elevations.
K. Location and details of all water control structures, control elevations, any seasonal water level regulation schedules; and the location and description of benchmarks (minimum of one benchmark per structure);

The locations, dimensions and details of the water control structures are found on Drawings 2, 3, and 6 through 8, located in Appendix A. All elevations are referenced to National Geodetic Vertical Datum 1929 (NGVD-29).
L. Location, dimensions, and elevations of all proposed structures, including docks, seawalls, utility lines, roads, and buildings;

No additional buildings or structures are proposed in this application.
M. Location, size, and design capacity of the internal water management facilities;

The locations of the internal water management facilities are shown on Drawings 2 through 4 of 9 located in Appendix A. The revised stage-versusstorage calculations for the internal water management facilities (dry ponds) are presented on Table 2.
N. Rights-of-way and easements for the system, including all on-site and off-site areas to be reserved for water management purposes, and rights-of-way and easements for the existing drainage system, if any;

The system is privately owned and operated and no rights-of-way or drainage easements have been proposed.
O. Receiving waters or surface water management systems into which runoff from the developed site will be discharged.

Surface runoff will routed to the dry retention facilities with no surface discharge.
P. Location and details of the erosion, sediment and turbidity control measures to be implemented during each phase of construction, and all permanent control measures to be implemented in post-development conditions;

The onsite owners' contractors will be held responsible for controlling offsite siltation and siltation to the adjacent ditch systems by implementing the use silt screens adjacent to all downstream ditch and offsite locations. The contractors will be made aware that siltation of downstream water bodies must be controlled to within 29 NTU of background at all times as per State water quality standards. The grading and drainage plans call for staple
sodding of all slopes 5:1 or greater for final cover. All other areas not sodded shall be seeded and mulched. Drawing 8 of 9, located in Appendix A, shows the details of the silt fence to be located around the perimeter of the landfill areas under construction. The location of the silt fence is shown on drawings 2 and 3 of 9 located in Appendix $A$.
Q. Location, grading, design water levels, and planting details of all mitigation areas;

No mitigation areas are proposed.
R. Site grading details, including perimeter site grading;

Please refer to the revised final grading and drainage plans and detail drawings located on Drawings 1 through 9, located in Appendix A for the site grading locations and details.
S. Disposal site for any excavated material, including temporary and permanent disposal sites;

The landfill has daily, intermediate, and final cover requirements, which utilize any excess fill.
T. dewatering plan details;

No dewatering is proposed.
U. For marine facilities, locations of any sewage pumpout facilities, fueling facilities, boat repair, and maintenance facilities, and fish cleaning stations;

This issue does not apply to the site.
V. Location and description of any nearby existing off-site features which might be affected by the proposed construction or development such as stormwater management ponds, buildings, or other structures, wetlands or other surface waters.

No special offsite features were noted. The surrounding land uses are mostly rural subdivisions and agricultural industries. Please note that some of the storm water ponds (Ponds 1, 2, and 3) have been previously constructed and permitted and are currently permitted and in use.
W. For phased projects, provide a master development plan.

This is a phased project that will feature a pre-consumer vegetative waste (PVW) Organic Recycling Facility (ORF) impervious area and associated access road and stormwater management facilities for the interim 5-year plan. The 5-year plan for constructing the PVWORF is shown as the intermediate phase and associated stormwater management facilities for the 5-year buildout. Also presented is the master final buildout development plan. Storm water management facilities will continue to be constructed as the adjacent areas that are being filled are brought up to grade as per the previously issued solid waste filling sequence plans.

## IV. Construction Schedule and Techniques

Provide a construction schedule, and a description of construction techniques, sequencing, and equipment. This information should specifically include the following:
A. Method for installing any pilings or seawall slabs;

No pilings or seawalls are proposed.
B. Schedule of implementation of a temporary or permanent erosion and turbidity control measures;

Silt fences are to be implemented prior to grading activities. Permanent erosion control will be accomplished by seeding and/or sodding all slopes and disturbed areas following the completion of the filling and final site grading. Storm water runoff, from areas under construction, is routed to excavated areas adjacent to the working face, where no waste has been placed, or to a retention pond if gravity will allow.
C. For projects that involve dredging or excavation in wetlands or other surface waters, describe the method of excavation, and the type of material to be excavated.

No dredging or excavation in wetlands is proposed.
D. For projects that involve fill in wetlands or other surface waters, describe the source and type of fill material to be used. For shoreline stabilization projects that involve the installation of riprap, state how these materials are to be placed (i.e., individuality or with heavy equipment) and whether the rocks will be underlain with filter cloth;

## No wetland fill or shoreline stabilization is proposed.

E. If dewatering is required, detail the dewatering proposal including the methods that area proposed to contain the discharge, methods of isolating dewatering areas, and indicate the period dewatering structures will be in place (Note a consumptive use or water use permit may be required);

No dewatering is proposed for this project.
F. Methods for transporting equipment and materials to and from the work site. If barges are required for access, provide the low water depths and draft of the fully loaded barge; and

No special access or transportation is required.
G. Demolition plan for any existing structures to be removed.

There are no existing structures onsite to be removed.
H. Identify the schedule and party responsible for completing monitoring, record drawings, and as-built certifications for the project when completed.

The owner, Waste Management Inc. of Florida, will be responsible for providing as-built certifications to the District within 30 days of the
completion of the storm water management system. A permit renewal is required if the permit will expire prior to the completion of the storm water management system.

## V. Drainage Information

A. Provide pre- and post-development drainage calculations, signed and sealed by an appropriate registered professional, as follows:

1. Runoff characteristics, including area, runoff curve number or runoff coefficient, and time of concentration for each drainage basin;

For all of the interim and permanent ponds proposed for the Vista Landfill, please refer to Table 2 for the volume calculations, contributing drainage sub basins and curve number calculations. Please refer to table E-3 for the water quality calculations for each contributing sub-basin draining to each pond. The post-developed contributing drainage sub-basins are shown on the contributing drainage sub-basin maps on Drawings 4 and 5 of 9 located in Appendix A. All landfill and buffer areas are considered impervious and have been assigned a curve number of 98. All times of concentration were rounded up to 10 minutes.
2. Water table elevations (normal and seasonal high) including aerial extent and magnitude of any proposed water table drawdown;

As per the attached geotechnical report, the water table elevation (surficial) typically varies from elevation 85 to elevation 60 across the site. The dry retention storm water management systems are designed to provide dry retention and provide the minimum vertical separation of 3 feet between the average seasonal high water table elevation and the pond bottoms. No proposed water table draw-downs are proposed by the construction of the storm water management system. Please refer to the attached Geotechnical Report by Devo Engineering (Appendix B) for a layout of the seasonal high water table elevations across the site.
3. Receiving water elevations (normal, wet season, design storm);

The receiving water body is groundwater as there is no surface discharge designed for the retention facilities.
4. Design storms used including rainfall depth, duration, frequency, and distribution;

Since the City of Apopka has separate criteria from the Department, the systems are designed to meet both the 25-year and 100-year / 24-hour storms. The most restrictive criteria require total retention of the 100-year / 24-hour storm with a precipitation total of 10.6 inches. This controls the design. The interim and final ponds' peak stages and recovery analyses were modeled using PONDS and were designed to drawdown in 14 days or less. If the ponds did not draw down completely in 14 days (Ponds 3 and 9), a second 100-year storm was routed to the retention area after 14 days. Both Ponds 3 and 9 hold a second consecutive 100-year / 24-hour storm. The PONDS software package was utilized for routing and the recovery analysis. The Orange County distribution for the 100-year /24-
hour storm served as the model input storm. The 100-year / 24-hour routing and recovery calculation results for all of the ponds are located in Appendix C, along with the recovery analysis. The Advanced Interconnected Channel and Pond Routing software (AdICPR) was utilized for modeling the conveyance system for the 100-year / 24-hour storm. Please refer to Appendix D for the AdICPR conveyance system modeling and node-link modeling schematics for the 100-year / 24-hour storm.
5. Runoff hydrograph(s) for each drainage basin, for all required design storm event(s);

Please refer to Appendix C for the PONDS hydraulic routing and infiltration recovery modeling results. Included is an input report and output summary and detail reports of results (peak stage and infiltration volumes and recovery times) for each pond using the PONDS software. The PONDS modeling results include peak stage and recovery times and are summarized on Table 4.
6. Stage-storage computations for any area such as a reservoir, close basin, detention area, or channel, used in storage routing;

Stage-area-storage computations for all ponds in the interim and buildout plan are presented in the volume calculation in Table 2.
7. Stage-discharge computations for any storage areas at a selected control point, such as control structure or natural restriction;

The contributing drainage areas are routed directly to the respective receiving pond. Ponds 4 and 10 have discharges to the respective downstream ponds (Pond 5 and Pond 9, respectively). The PONDS software calculates the flow rates out of each pond, and the overflow discharge is then imported into the downstream pond as an inflow node. Please refer to the PONDS results in Appendix C for the overflow weir lengths, elevations and discharge rates. The weir overflow lengths correspond to the type " $D$ " overflow structures.
8. Flood routings through on-site conveyance and storage areas;

Please refer to Appendix C for the PONDS routing calculations for the storage areas (dry ponds) for the interim and buildout designs with infiltration for peak stages and volume recovery draw down times. Onsite conveyance calculations for the new terraces and down comer structures are found in Appendix D utilizing the AdICPR software and neglecting infiltration.
9. Water surface profiles in the primary drainage system for each required design storm event(s);

Please refer to the PONDS output summary report located in Appendix C for the peak stages in the new stormwater ponds for the 100-year / 24hour event. The peak stages for the 100-year /24-hour event in the new ponds are summarized in Table 4 and are also shown on the new pond cross-sections and details located on Drawings 6 through 8 located in Appendix A. Please note Ponds 1 through 3 are already permitted and
constructed.
10. Runoff peak rates and volumes discharged from the system for each required design storm event(s); and

Runoff is totally contained within the system and does not discharge offsite. The total runoff volume for each drainage basin is found in the PONDS summary output report, located in Appendix C.
11. Tail water history and justification (time and elevation);

Since there is no surface discharge, tail water is not applicable to this design.
12. Pump specifications and operating curves for range of possible operating conditions (if used in system).

There are no pumps proposed in the system.
B. Provide the results of any percolation tests, where appropriate, and soil borings that are representative of the actual site conditions;

The soil boring results and summary of water well data is presented in the Geotechnical Report performed by Devo Engineering in Appendix B. The seasonal high, top of aquifer, horizontal saturated and vertical unsaturated conductivities and porosity and confining layer elevations are all defined on Table 3 on Page 7 of the report for the entire site. The values shown and utilized have already been incorporated with a safety factor of 2 as a minimum. A porosity of $20 \%$ is utilized for the site as well as a horizontal saturated conductivity of 15 feet/day and a vertical unsaturated conductivity of 5 feet per day for all of the ponds onsite, existing and proposed. The base of aquifer and seasonal high are taken directly from Table 3 in the attached geotechnical report.
C. Provide the acreage, and percentages of the total project, of the following:

1. impervious surfaces, excluding wetlands,

The landfill will be covered with 18" of protective cover and 6" of topsoil overlain with sod, but for simplicity, the final cover is all considered impervious. The impervious area is the sum of the stabilized roadways and closed landfill areas and buffer areas and totals 117.4 acres (78\%).
2. pervious surfaces (green areas, not including wetlands),

The total amount of pervious green areas not including the landfill area and not including the dry ponds is approximately 11 acres. This equates to 7.3\% of the total site area.
3. lakes, canals, retention areas, other open water areas,

The total of the retention areas is estimated at 22.2 acres or $14.7 \%$ of the total site area.
4. wetlands.

There are no wetlands onsite (0\%).
D. Provide an engineering analysis of floodplain storage and conveyance (if applicable), including:

1. Hydraulic calculations for all proposed traversing works;

There is no floodplain encroachment or traversing works.
2. Backwater water surface profiles showing upstream impact of traversing works;

There are no adverse upstream impacts as a result of the storm water system and no traversing works.
3. Location and volume of encroachment within regulated floodplain(s); and

There are no regulatory floodways within the project area. No encroachment into this area has been proposed.
4. Plan for compensating floodplain storage, if necessary, and calculations required for determining minimum building and road flood elevations.

There is no lost floodplain volume due to the project. No filling is proposed in Zone " $A$ " (100 year floodplain). The site is located totally within flood zone " $X$ " (out of the 100-year floodplain).
E. Provide an analysis of the water quality treatment system including:

1. A description of the proposed storm water treatment methodology that addresses the type of treatment, pollution abatement volumes, and recovery analysis; and

The storm water treatment methodology will be dry retention with total retention with recovery by percolation. Total retention of the 100-year / 24-hour storm with a rainfall depth of 10.6 inches easily satisfies both the St. Johns River Water Management criteria for the FDEP and the City of Apopka criteria for water quality. The system provides for over 10 inches of water quality treatment without discharge offsite. This performance exceeds the most restrictive criteria. All of the existing ponds (1 through 3) currently draw down with no signs of appreciable standing water following a storm event or nuisance wetland indicators. The new ponds have been modeled for routing and recovery of the treatment volumes within 72 hours after the storm event as per the FDEP criteria. All ponds totally recover the storage volumes within 14 days except for Ponds 3 and 9, which contained a second consecutive 100-year event with over a foot of freeboard after the 14-day drawdown period.
2. Construction plans and calculations that address stage-storage and design elevations, which demonstrate compliance with the appropriate water quality treatment criteria.

#### Abstract

A quick inspection of the Ponds input and output reports in Appendix C, the volume calculations in Table 2 and the water quality calculations in Table 3 verifies that the minimum treatment volumes are provided and exceeded. The results indicate that the required treatment volume for each basin is contained in each pond and infiltrated within 72 hours after the storm event. Also, the results demonstrate that all water from the basins is percolated onsite with no offsite discharge. Therefore, there can be no water quality violations to surface waters at the site as there is no surface discharge flowing offsite.

F. Provide a description of the engineering methodology, assumptions and references for the parameters listed above, and a copy of all such computations, engineering plans, and specifications used to analyze the system. If a computer program is used for the analysis, provide the name of the program, a description of the program, input and output data, two diskette copies, if available, and justification for model selection.

The PONDS software package was utilized for routing and the recovery analysis of the dry ponds. A copy of the electronic input files is available upon request. Aquifer properties were taken from current Geotechnical Report performed last June by Devo Engineering Overflow weirs in the PONDS program simulate an FDOT type " $D$ " drop inlet with a weir coefficient "c" value of 3.1.

## VI. Operation and Maintenance and Legal Documentation

A. Describe the overall maintenance and operation schedule for the proposed system.

Periodic monthly inspections or inspections after heavy rainfall events should be performed on the flumes, swales, inlets and down comer pipes. The system is self-operating and will not require extensive maintenance. All eroded areas shall be seeded and mulched and returned to design grades. All trash and blockages shall be cleaned and removed. All erosion or siltation shall be repaired and stabilized back to design elevations and dimensions. The swale slopes shall be mowed periodically to prevent overgrowth. This follows the guidelines of the previously submitted applications and is shown on the construction plans details in Appendix A.
B. Identify the entity that will be responsible for operating and maintaining the system in perpetuity if different than the permittee, a draft document enumerating the enforceable affirmative obligations on the entity to properly operate and maintain the system for its expected life, and documentation of the entity's financial responsibility for long-term maintenance. If the proposed operation and maintenance entity is not a property owner's association, provide proof of the existence of an entity, or the future acceptance of the system by an entity which will operate and maintain the system. If a property owner's association is the proposed operation and maintenance entity, provide copies of the articles of incorporation for the association and copies of the declaration, restrictive covenants, deed restrictions, or other operational documents that assign responsibility for the operation and maintenance of the system. Provide information ensuring the continued adequate access to the system for maintenance purposes. Before transfer of the system to the operating entity will be approved, the permittee must document that the transferee will be bound by all terms and conditions of the permit.

Waste Management Inc. of Florida will continue to be the entity responsible for operation and maintenance for the storm water management system.
C. Provide copies of all proposed conservation easements, storm water management system easements, property owner's association documents, and plats for the property containing the proposed system.

No conservation easements or homeowners associations are proposed or required.
D. Provide indication of how water and wastewater service will be supplied. Letters of commitment from off-site suppliers must be included.

No new water or wastewater demands are created by this closure application.
E. Provide a copy of the boundary survey and/or legal description and acreage of the total land area of contiguous property owned/controlled by the applicant.

A copy of the topographic survey is located at the end of the construction plans in Appendix A. The boundary survey and associated legal description have been previously established by others in previous permit applications and is reproduced on the topographic survey and the grading plans.
VII. Water Use
A. Will the surface water system be used for water supply, including landscape irrigation, or recreation.

No withdrawals from surface waters are proposed.
B. If a Consumptive Use or Water Use permit has been issued for the project, state the permit number.

No consumptive use permit has been required or applied for on behalf of the applicant.
C. If no Consumptive Use or Water Use permit has been issued for the project, indicate if such a permit will be required and when the application for a permit will be submitted.

No consumptive water use is required.
D. Indicate how any existing wells located within the project site will be utilized or abandoned.

The existing monitoring wells will remain as previously permitted.

## Table 3. Water Quality Calculations

## I. Water Quality Calculations:

St Johns River Water Management District water quality criteria requires the greater of 1" of runoff over the drainage area or 1.75 " of runoff from the impervious area:

## A. Interim Plan:

## 1. Temporary Pond

Total Contributing Basin Area $=415,998 \mathrm{ft}^{2} \quad(9.55 \mathrm{ac}) \quad$ (from Table 2)
a) One Inch of runoff over the drainage basin:

Required Treatment Volume $=415,998 \mathrm{ft}^{2} \mathrm{x}(1 / 12) \mathrm{ft}=34,667 \mathrm{ft}^{3}$
b) 1.75 inches of runoff from the impervious area:

Impervious Area: 415,998 ft ${ }^{2}$
Required Treatment Volume $=415,998 \mathrm{ft}^{2} \times(1.75 / 12) \mathrm{ft}=60,666 \mathrm{ft}^{3}$
Treatment Volume of $\mathbf{6 0 , 6 6 6} \mathrm{ft}^{3}$ dominates
( $985,762 \mathrm{ft} \wedge 3$ provided at elev 82)
Volume Infiltrated in 72 Hours $=\mathbf{3 5 9 , 2 7 8 ~ f t} \wedge 3$
(see Appendix C)

## 2. Interim Pond 10:

Total Contributing Basin Area $=365,904 \mathrm{ft}^{2} \quad(8.40 \mathrm{ac}) \quad$ (from Table 2)
a) One Inch of runoff over the drainage basin:

Required Treatment Volume $=365,904 \mathrm{ft}^{2} \times(1 / 12) \mathrm{ft}=30,492 \mathrm{ft}^{3}$
b) 1.75 inches of runoff from the impervious area:

Impervious Area: $365,904 \mathrm{ft}^{2}$
Required Treatment Volume $=365,904 \mathrm{ft}^{2} \times(1.75 / 12) \mathrm{ft}=53,361 \mathrm{ft}^{3}$
Treatment Volume of $53,361 \mathrm{ft}^{3}$ dominates
( $132,640 \mathrm{ft}^{\wedge} 3$ provided at elev 90.5 )
Volume Infiltrated in 72 Hours $=175,961 \mathrm{ft} \wedge 3$ (see Appendix C)

## 3. Interim Pond 11:

Total Contributing Basin Area $=110,642 \mathrm{ft}^{2} \quad(2.54 \mathrm{ac}) \quad$ (from Table 2)
a) One Inch of runoff over the drainage basin:

Required Treatment Volume $=110,642 \mathrm{ft}^{2} \times(1 / 12) \mathrm{ft}=9,220 \mathrm{ft}^{3}$
b) 1.75 inches of runoff from the impervious area:

Impervious Area: 110,642 $\mathrm{ft}^{2}$
Required Treatment Volume $=110,642 \mathrm{ft}^{2} \times(1.75 / 12) \mathrm{ft}=16,135 \mathrm{ft}^{3}$
Treatment Volume of $16,135 \mathrm{ft}^{3}$ dominates
(224,334 ft^3 provided at elev 92)
Volume Infiltrated in 72 Hours $=196,358 \mathrm{ft}^{\wedge} 3$ (see Appendix C)

## 4. Interim Pond 12:

Total Contributing Basin Area $=294,030 \mathrm{ft}^{2} \quad(6.75 \mathrm{ac}) \quad$ (from Table 2)
a) One Inch of runoff over the drainage basin:

Required Treatment Volume $=294,030 \mathrm{ft}^{2} \times(1 / 12) \mathrm{ft}=24,502 \mathrm{ft}^{3}$
b) 1.75 inches of runoff from the impervious area:

Impervious Area: 294,030 $\mathrm{ft}^{2}$
Required Treatment Volume $=294,030 \mathrm{ft}^{2} \times(1.75 / 12) \mathrm{ft}=42,879 \mathrm{ft}^{3}$
Treatment Volume of $42,879 \mathrm{ft}^{3}$ dominates
(290,545 ft^3 provided at elev 79)
Volume Infiltrated in 72 Hours $=\mathbf{2 3 1}, \mathbf{0 1 9} \mathbf{f t} \wedge 3$ (see Appendix C)

## B. Buildout Plan:

## 1. Pond 1

Total Contributing Basin Area $=572,378 \mathrm{ft}^{2}$
a) One Inch of runoff over the drainage basin:

Required Treatment Volume $=572,378 \mathrm{ft}^{2} \times(1 / 12) \mathrm{ft}=47,698 \mathrm{ft}^{3}$
b) 1.75 inches of runoff from the impervious area:

Impervious Area: 572,378 $\mathrm{ft}^{2}$
Required Treatment Volume $=572,378 \mathrm{ft}^{2} \times(1.75 / 12) \mathrm{ft}=83,472 \mathrm{ft}^{3}$

## Treatment Volume of $83,472 \mathrm{ft}^{3}$ dominates

(588,060 ft^3 provided at elev 94)

## Volume Infiltrated in $\mathbf{7 2}$ Hours $=\mathbf{4 0 2 , 0 0 1 ~ f t}{ }^{\wedge} \mathbf{3}$

 (see Appendix C)
## 2. Pond 2

Total Contributing Basin Area $=828,076 \mathrm{ft}^{2} \quad(19.01 \mathrm{ac}) \quad$ (from Table 2)
a) One Inch of runoff over the drainage basin:

Required Treatment Volume $=828,076 \mathrm{ft}^{2} \times(1 / 12) \mathrm{ft}=69,006 \mathrm{ft}^{3}$
b) 1.75 inches of runoff from the impervious area:

Impervious Area: 828,076 $\mathrm{ft}^{2}$
Required Treatment Volume $=828,076 \mathrm{ft}^{2} \times(1.75 / 12) \mathrm{ft}=120,761 \mathrm{ft}^{3}$
Treatment Volume of $120,761 \mathrm{ft}^{3}$ dominates
(1,723,669 ft^3 provided at elev 84)
Volume Infiltrated in $\mathbf{7 2}$ Hours $=\mathbf{6 6 3}, \mathbf{7 6 3} \mathrm{ft}^{\wedge} \mathbf{3}$ (see Appendix C)

## 3. Pond 3

Total Contributing Basin Area $=364,597 \mathrm{ft}^{2} \quad(8.37 \mathrm{ac}) \quad$ (from Table 2)
a) One Inch of runoff over the drainage basin:

Required Treatment Volume $=364,597 \mathrm{ft}^{2} \times(1 / 12) \mathrm{ft}=30,383 \mathrm{ft}^{3}$
b) 1.75 inches of runoff from the impervious area:

Impervious Area: $364,597 \mathrm{ft}^{2}$
Required Treatment Volume $=364,597 \mathrm{ft}^{2} \times(1.75 / 12) \mathrm{ft}=53,170 \mathrm{ft}^{3}$

## Treatment Volume of $53,170 \mathrm{ft}^{3}$ dominates

(1,140,836 ft^3 provided at elev 102)
Volume Infiltrated in $\mathbf{7 2}$ Hours $=\mathbf{2 4 6}, \mathbf{1 6 5} \mathbf{f t} \wedge 3$
(see Appendix C)

## 4. Pond 4

Total Contributing Basin Area $=331,056 \mathrm{ft}^{2} \quad(7.60 \mathrm{ac}) \quad$ (from Table 2)
a) One Inch of runoff over the drainage basin:

Required Treatment Volume $=331,056 \mathrm{ft}^{2} \times(1 / 12) \mathrm{ft}=27,588 \mathrm{ft}^{3}$
b) 1.75 inches of runoff from the impervious area:

Impervious Area: 331,056 $\mathrm{ft}^{2}$
Required Treatment Volume $=331,056 \mathrm{ft}^{2} \times(1.75 / 12) \mathrm{ft}=48,279 \mathrm{ft}^{3}$
Treatment Volume of $48,279 \mathrm{ft}^{3}$ dominates
( $170,842 \mathrm{ft}^{\wedge} 3$ provided at elev 93.8 )

## Volume Infiltrated in $\mathbf{7 2}$ Hours $=\mathbf{2 2 4 , 1 4 5} \mathbf{f t} \wedge 3$

(see Appendix C)

## 5. Pond 5

Total Contributing Basin Area $=866,408 \mathrm{ft}^{2} \quad(19.89 \mathrm{ac}) \quad$ (from Table 2)
a) One Inch of runoff over the drainage basin:

$$
\text { Required Treatment Volume }=866,408 \mathrm{ft}^{2} \times(1 / 12) \mathrm{ft}=72,200 \mathrm{ft}^{3}
$$

b) 1.75 inches of runoff from the impervious area:

Impervious Area: 866,408 $\mathrm{ft}^{2}$
Required Treatment Volume $=866,408 \mathrm{ft}^{2} \times(1.75 / 12) \mathrm{ft}=126,351 \mathrm{ft}^{3}$
Treatment Volume of $126,351 \mathrm{ft}^{3}$ dominates
(703,930 ft^3 provided at elev 87)
Volume Infiltrated in $\mathbf{7 2}$ Hours $=\mathbf{7 6 0 , 0 7 6} \mathbf{f t}{ }^{\wedge} 3$ (see Appendix C)

## 6. Pond 6

Total Contributing Basin Area $=117,612 \mathrm{ft}^{2} \quad(2.70 \mathrm{ac}) \quad$ (from Table 2)
a) One Inch of runoff over the drainage basin:

Required Treatment Volume $=117,612 \mathrm{ft}^{2} \times(1 / 12) \mathrm{ft}=9,801 \mathrm{ft}^{3}$
b) 1.75 inches of runoff from the impervious area:

Impervious Area: 117,612 $\mathrm{ft}^{2}$
Required Treatment Volume $=117,612 \mathrm{ft}^{2} \times(1.75 / 12) \mathrm{ft}=17,152 \mathrm{ft}^{3}$
Treatment Volume of $17,152 \mathrm{ft}^{3}$ dominates (101,159 ft^3 provided at elev 94)

Volume Infiltrated in 72 Hours $=101,576 \mathrm{ft} \wedge 3$
(see Appendix C)

## 7. Pond 7

Total Contributing Basin Area $=459,558 \mathrm{ft}^{2} \quad(10.55 \mathrm{ac}) \quad$ (from Table 2)
a) One Inch of runoff over the drainage basin:

Required Treatment Volume $=459,588 \mathrm{ft}^{2} \mathrm{x}(1 / 12) \mathrm{ft}=38,296 \mathrm{ft}^{3}$
b) 1.75 inches of runoff from the impervious area:

Impervious Area: 449,588 ft ${ }^{2}$
Required Treatment Volume $=459,588 \mathrm{ft}^{2} \times(1.75 / 12) \mathrm{ft}=67,019 \mathrm{ft}^{3}$

Treatment Volume of $67,019 \mathrm{ft}^{3}$ dominates
(607,226 ft^3 provided at elev 112)
Volume Infiltrated in 72 Hours $=\mathbf{3 9 6 , 8 9 8} \mathbf{f t \wedge} \mathbf{3}$ (see Appendix C)

## 8. Pond 8

Total Contributing Basin Area $=270,943 \mathrm{ft}^{2} \quad(6.22 \mathrm{ac}) \quad$ (from Table 2)
a) One Inch of runoff over the drainage basin:

Required Treatment Volume $=270,943 \mathrm{ft}^{2} \mathrm{x}(1 / 12) \mathrm{ft}=22,578 \mathrm{ft}^{3}$
b) 1.75 inches of runoff from the impervious area:

Impervious Area: 270,943 ft ${ }^{2}$
Required Treatment Volume $=270,943 \mathrm{ft}^{2} \mathrm{x}(1.75 / 12) \mathrm{ft}=39,512 \mathrm{ft}^{3}$

Treatment Volume of $39,512 \mathrm{ft}^{3}$ dominates
(275,734 ft^3 provided at elev 100)
Volume Infiltrated in 72 Hours $=\mathbf{2 3 4 , 0 0 1} \mathbf{f t \wedge} \mathbf{3}$ (see Appendix C)

## 9. Pond 9

Total Contributing Basin Area $=485,258 \mathrm{ft}^{2} \quad(11.14 \mathrm{ac}) \quad$ (from Table 2)
a) One Inch of runoff over the drainage basin:

Required Treatment Volume $=485,258 \mathrm{ft}^{2} \mathrm{x}(1 / 12) \mathrm{ft}=40,438 \mathrm{ft}^{3}$
b) 1.75 inches of runoff from the impervious area:

Impervious Area: 485,258 ft ${ }^{2}$
Required Treatment Volume $=485,258 \mathrm{ft}^{2} \times(1.75 / 12) \mathrm{ft}=70,767 \mathrm{ft}^{3}$
Treatment Volume of 70,767 $\mathrm{ft}^{3}$ dominates
(842,015 ft^3 provided at elev 90 )

## Volume Infiltrated in 72 Hours $=\mathbf{3 7 7}, 944 \mathrm{ft} \wedge \mathbf{3}$

 (see Appendix C)
## 10. Pond 10

Total Contributing Basin Area $=369,388 \mathrm{ft}^{2} \quad(8.48 \mathrm{ac}) \quad$ (from Table 2)
a) One Inch of runoff over the drainage basin:

Required Treatment Volume $=369,388 \mathrm{ft}^{2} \times(1 / 12) \mathrm{ft}=30,782 \mathrm{ft}^{3}$
b) 1.75 inches of runoff from the impervious area:

Impervious Area: 368,388 $\mathrm{ft}^{2}$
Required Treatment Volume $=369,388 \mathrm{ft}^{2} \times(1.75 / 12) \mathrm{ft}=53,869 \mathrm{ft}^{3}$

## Treatment Volume of $53,869 \mathrm{ft}^{3}$ dominates

( $69,696 \mathrm{ft}^{\wedge} 3$ provided at elev 87.5)
Volume Infiltrated in 72 Hours $=122,592 \mathrm{ft} \wedge 3$
(see Appendix C)

## 11. Pond 11

Total Contributing Basin Area $=689,990 \mathrm{ft}^{2} \quad(15.84 \mathrm{ac}) \quad$ (from Table 2)
a) One Inch of runoff over the drainage basin:

Required Treatment Volume $=689,990 \mathrm{ft}^{2} \times(1 / 12) \mathrm{ft}=57,499 \mathrm{ft}^{3}$
b) 1.75 inches of runoff from the impervious area:

Impervious Area: 689,990 $\mathrm{ft}^{2}$
Required Treatment Volume $=689,990 \mathrm{ft}^{2} \times(1.75 / 12) \mathrm{ft}=100,624 \mathrm{ft}^{3}$
Treatment Volume of $100,624 \mathrm{ft}^{3}$ dominates
( $669,081 \mathrm{ft}^{\wedge} 3$ provided at elev 91 )
Volume Infiltrated in 72 Hours $=595,912 \mathrm{ft} \wedge 3$ (see Appendix C)

## 12. Pond 12

Total Contributing Basin Area $=727,452 \mathrm{ft}^{2} \quad(16.70 \mathrm{ac}) \quad$ (from Table 2)
a) One Inch of runoff over the drainage basin:

$$
\text { Required Treatment Volume }=727,452 \mathrm{ft}^{2} \times(1 / 12) \mathrm{ft}=60,621 \mathrm{ft}^{3}
$$

b) 1.75 inches of runoff from the impervious area:

Impervious Area: 727,452 ft ${ }^{2}$
Required Treatment Volume $=727,452 \mathrm{ft}^{2} \times(1.75 / 12) \mathrm{ft}=106,087 \mathrm{ft}^{3}$
Treatment Volume of $106,087 \mathrm{ft}^{3}$ dominates
(558,875 ft^3 provided at elev 79)
Volume Infiltrated in 72 Hours $=465,401 \mathrm{ft}$ ^3
(see Appendix C)

Table 4. Summary of PONDS Modeling Results

## I. Summary of PONDS Modeling Results:

A) Interim PONDS Modeling Results:

| Event <br> $(\mathrm{yrs} / \mathrm{hrs})$ | Pond ID | Conal <br> Basin Area <br> $(\mathrm{ac})$ | Coak Stage <br> $(\mathrm{ft})$ | Top of <br> Pond <br> Stage (ft) | Completely <br> Evacuate <br> (hrs after <br> storm) |

## Trepareal ty

DEVO SEEREERAM, PH.D., P.E., LLC.

Dear Mr. Schumacher:

The attached report documents the results of our supplemental geotechnical field investigation, review of previous and current data, our evaluation and assessment of updated SHWT estimates and other aquifer parameters to be used in the ground infiltration analysis of the proposed stormwater management areas at WM's Vista Class III Landfill site located in Apopka, Florida.

Please do not hesitate to contact us if you have any questions regarding the contents of this report.

### 1.0 Background Information

The stormwater management system for the Waste Management's Vista Class III Landfill on Keene Road (Apopka, Orange County, Fl ) is being re-permitted by Applied Technology \& Management, Inc. The proposed layout of the stormwater management system (i.e., perimeter ponds and swales) are shown in Figure 1.1 (attached).

Devo Engineering was requested to provide geotechnical engineering supporting data for the stormwater management areas.

### 2.0 Previously Issued Reports

In calendar years 2002 to 2005, Devo Engineering performed several water table and hydro-stratigraphic evaluations of the landfill footprints formerly known as BD-3 and BD-4 (see Figure 1.1 for limits of BD-2, BD-3, and BD-4).

These studies were multi-purpose and were used for setting the landfill base grades to provide adequate separation from the seasonal high water table, assessing the rise in onsite water table from adjacent offsite artificial recharge facilities. In addition, we also provided infiltration parameters for the stormwater management swales around the BD-3 and BD-4 phases. A list of the previously issued reports is in chronological order below:

## BD3 Footprint (see limits of BD3 in Figure 1.1)

(1) October 21, 2002. Estimate Of Seasonal High Groundwater Elevation, Bishop \& Buttrey Class III Landfill Expansion (BD3 Site), Keene Road \& McQueen Road, Orange County, Florida
(2) April 21, 2003. Supplement \#1 to Report Dated October 21, 2002. Additional Hydrogeologic Data \& Responses to Selected Comments of Orange County EPD RAI dated Dec 27, 2002. Buttrey Development Three L.L.C. Class III Landfill Expansion (BD3 Site) Keene Road \& McQueen Road, City of Apopka, Florida
(3) June 13, 2003. Supplement \#2 to Report Dated October 21, 2002. Additional Hydrogeologic Data, Buttrey Development Three L.L.C. Class III Landfill Expansion (BD3 Site). Keene Road \& McQueen Road, City of Apopka, Florida

## BD4 Footprint (see limits of BD4 in Figure 1.1)

(4) July 1, 2003. Preliminary Seasonal High Water Table Estimates, Buttrey Development Four L.L.C. Class III Landfill Expansion (BD4 Site), Keene Road \& McQueen Road, City of Apopka, Florida
(5) October 17, 2003. Seasonal High Water Table Estimates, Buttrey Development Four L.L.C. Class III Landfill Expansion (BD4 Site), Keene Road \& McQueen Road, City of Apopka, Florida.
(6) February 6, 2004. Potential Water Table Impact of Lake Cora Lee Wetland Treatment On Buttrey Development Four L.L.C. Class III Landfill Expansion (BD4 Site). Keene Road \& McQueen Road, City of Apopka, Florida
(7) February 10, 2004. Water Table Estimates \& Proposed Base Grade Elevations, Buttrey Development Four L.L.C. Class III Landfill Expansion (BD4 Site), Keene Road \& McQueen Road, City of Apopka, Florida
(8) February 3, 2005. Potential Water Table Impact of Lake Cora Lee Wetland Treatment On Buttrey Development Four L.L.C. Class III Landfill Expansion (BD4 Site). Keene Road \& McQueen Road, City of Apopka, Florida

## BD3 \& BD4 Combined Footprint

(9) February 22, 2005. Estimate of Aquifer Parameters for Swale Recovery Analysis. Bishop and Buttrey, Keene Road Landfill, City of Apopka, Florida. It is our understanding that some of these parameters were modified by the drainage engineer to account for mounding from the adjacent Lake Cora Lee project.

### 3.0 Existing Dry Retention Ponds on North

There are three (3) existing dry ponds on the north side of the property (north of the BD-2 landfill footprint) and these ponds are labeled Pond 1, Pond 2, and Pond 3 in Figure 1.1. These ponds are also to be re-permitted in addition to the ponds labeled Ponds 4 through 12.

Key data on the northern ponds are as follows:

| Table 1. Key Pond Parameters |  |  |  |
| :---: | :---: | :---: | :---: |
| Pond No. | Area (ac) | Top elevation (ft) | Bottom elevation (ft) |
| POND 1 | 6.1 | 94 | 70 |
| POND 2 | 7.6 | 84 | 70 |
| POND 3 | 7.3 | 102 | 90 |

These ponds have been constructed since 2006-2007 (based on review of historical aerials) and appear to be functioning effectively as dry bottom ponds based on our recent site inspection.

### 4.0 Objectives

The objectives of this investigation will be to provide the following aquifer parameters for each stormwater management area shown in Figure 1.1:
$\Leftrightarrow \quad$ Seasonal high groundwater elevations
$\Rightarrow \quad$ Base of aquifer
$\Rightarrow \quad$ Horizontal saturated hydraulic conductivity
$\Rightarrow$ Fillable porosity
$\Rightarrow \quad$ Unsaturated vertical infiltration rate

### 5.0 Supplemental Geotechnical Field Work

The follow supplemental scope of field testing was undertaken for this assessment:

1. Four (4) Double Ring Infiltrometer (DRI) tests in Ponds 1, 2, and 3 (the existing ponds along Keene Road). These test locations are labeled DRI-1, DRI-2A, DRI-2B, and DRI-3, as shown in Figure 1.1.
2. Four (4) hand auger borings within the existing pond bottoms. These boring locations are labeled HA-1 through HA-4 in Figure 1.1. Borings HA-1 to HA-3 were drilled to 10 ft depth while boring HA-4 was drilled to 7 ft depth.
3. Visual and tactile examination of soil samples.
4. Measurement of the water table in accessible piezometers within the site.

### 6.0 Soil and Water Table Conditions

### 6.1 Presentation of Data

Borings and DRI test locations are shown in Figure 1.1 (attached).
Soil profiles for the four (4) hand auger borings drilled with the pond bottoms are presented in Figure 2.1. Water table measurements are annotated adjacent to the soil profiles in Figure 2.1.

Figure 1.1 shows contours of the seasonal high water table altitude (in ft NGVD) developed from our previous studies of the site (see Section 2 for list of reports).

### 6.2 Soil Stratigraphy - Ponds 1, 2, and 3

## Pond 1 [Boring HA-1, Figure 2.1]

The soil boring drilled in Pond 1 (HA-1) disclosed a very thin ( 0.2 ft thick) surficial layer of silty material (dried slush) underlain by free-draining fine sands through to the termination of the boring at 10 ft depth .

## Pond 2 [Borings HA-2 \& HA-3, Figure 2.1]

The soil borings drilled in Pond 2 (HA-2 \& HA-3) both disclosed layers of fine sands from the ground surface through to the termination of the borings at 10 ft depth.

## Pond 3 [Boring HA-4, Figure 2.1]

The soil boring drilled in Pond 3, HA-4, disclosed a 2 ft thick surficial layer of fine sand with clay lumps, underlain by a 1 ft layers of clayey fine sand and fine sand with clay lumps to 4 ft depth. From 4 ft depth the boring disclosed layers of fine sands through to the termination of the boring at 7 ft depth.

### 6.3 Soil Infiltration Rate

Double ring infiltrometer tests performed within the pond bottoms disclosed values of 15.3 ft /day to 76.5 ft day and these results are shown in Table 2 . The values obtained were generally with typical range for the types of sandy soils with deep water table. Detailed DRI test results are included in Attachment \#1.

| Table 2. Summary of DRI Test Results |  |  |  |
| :---: | :---: | :---: | :---: |
| Pond No. | DRI Test No. | Soil type(s) | Permeability <br> (ft/day) |
|  | DRI-1 | Fine sands | 50.2 |
| POND 2/DA-2A | DRI-2 | Fine sands | 76.5 |
|  | DRI-3 | Fine sands | 60.0 |
| POND 3/DA-3A | DRI-4 | Clayey fine sand and fine sand | 15.3 |

### 6.4 Water Table

The ground water table was not encountered in three (3) of the four (4) borings drilled in this investigation and these borings were drilled to 10 ft depth. A seasonal high water table contour map of the site is presented in Figure 1.1 and this was developed based on our previous studies.

### 7.0 Assessment and Recommendations

Based on the data collected as part of this evaluation and the previously collected data, the aquifer parameters in Table 3 are recommended for each of the stormwater management areas. Note that the unsaturated vertical infiltration rate values in this table already include a safety factor of over 2 and do not need to be factored downward when used in the computer model.

| Table 3. Recommended Aquifer Parameters for Analysis of Stormwater Management Areas |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Elevations (ft NGVD) |  |  |  | Unsaturated Infiltration Rate (includes FS = 2) (ft/day) | Horizontal <br> Saturated <br> Hydraulic <br> Conductivity <br> (ft/day) | Fillable Porosity <br> (\%) |
| Pond <br> Number | Pond <br> Top of <br> Bank | Pond Bottom | Seasonal High Water Table | Base of Aquifer |  |  |  |
| 1 | 94 | 70 | 60 | 59 | 5 | 15 | 20 |
| 2 | 84 | 70 | 60 | 59 | 5 | 15 | 20 |
| 3 | 102 | 90 | 85 | 84 | 5 | 15 | 20 |
| 4 | 95 | 82 | 60 | 59 | 5 | 15 | 20 |
| 5 | 87 | 72 | 60 | 59 | 5 | 15 | 20 |
| 6 | 95 | 85 | 67 | 66 | 5 | 15 | 20 |
| 7 | 112 | 102 | 85 | 84 | 5 | 15 | 20 |
| 8 | 100 | 92 | 77 | 76 | 5 | 15 | 20 |
| 9 | 90 | 78 | 74 | 69 | 5 | 15 | 20 |
| 10 | 92 | 82 | 79 | 74 | 5 | 15 | 20 |
| 11 | 91 | 80 | 60 | 59 | 5 | 15 | 20 |
| 12 | 78 | 70 | 62 | 61 | 5 | 15 | 20 |

## Notes:

1. The unsaturated vertical infiltration rate vlaues in this table already incorporate a safety factor of over 2.
2. The seasonal high water table values for Ponds 9 and 10 are each raised 4 ft due to potential mounding from artificial recharge from the adjacent Lake Cora Lee wetland treatment project.

The weighted horizontal hydraulic conductivity calculations were presented previously in our February 2005 report. A conservative value of the unsaturated infiltration rate is recommended ( 5 ft /day versus measured values in the range 15 to 76 ft /day.

## PONDS Routing and Recovery Analysis

## Interim Plan Results

# PONDS Routing and Recovery Analysis 

Interim Plan Results<br>Interim Temporary Pond 100-year / 24-Hour Storm

Input Report<br>Summary of Results<br>Detailed Results

(Pond dry at Hour 48)

PONDS Version 3.2.0207

## Retention Pond Recovery - Refined Method <br> Copyright 2003 <br> Devo Seereeram, Ph.D., P.E.

## Project Data

| Project Name: | Vista Landfill Redesign Interim Stormwater Plan |
| :--- | :--- |
| Simulation Description: | Interim Temp Pond <br> 100 Year / 24 Hour Routing and Recovery Analysis w/ infiltration <br> Iterim Temp Pond |
| Project Number: | $10-2141$ |
| Engineer: | cms |
| Supervising Engineer: | cms |
| Date: | $01-06-2011$ |

## Aquifer Data

Base Of Aquifer Elevation, $[\mathrm{B}]$ ( ft datum): ..... 59.00
Water Table Elevation, [WT] (ft datum): ..... 60.00
Horizontal Saturated Hydraulic Conductivity, [Kh] (ft/day): ..... 15.00
Fillable Porosity, [ n ] (\%): ..... 20.00
Unsaturated Vertical Infiltration Rate, [lv] (ft/day): ..... 5.0
Maximum Area For Unsaturated Infiltration, [Av] (ft²): ..... 122578.0
Geometry Data
Equivalent Pond Length, [L] (ft): ..... 800.0
Equivalent Pond Width, $[\mathrm{W}]$ (ft): ..... 50.0
Ground water mound is expected to intersect the pond bottom

## Stage vs Area Data

| Stage <br> (ft datum) | Area <br> $\left(\mathrm{ft}^{2}\right)$ |
| ---: | ---: |
| 68.00 | 2309.0 |
| 70.00 | 10045.0 |
| 72.00 | 44083.0 |
| 74.00 | 72309.0 |
| 76.00 | 89298.0 |
| 78.00 | 102148.0 |
| 80.00 | 112559.0 |
| 82.00 | 122578.0 |

## Discharge Structures

## Discharge Structure \#1 is inactive

Discharge Structure \#2 is inactive

# PONDS Routing and Recovery Analysis 

## Interim Plan Results

Pond 10<br>100-year / 24-Hour Storm

Input Report
Summary of Results Detailed Results
(Pond dry at Hour 211)
(Cut off early due to unnecessary length)

PONDS Version 3.2.0207

## Retention Pond Recovery - Refined Method <br> Copyright 2003 <br> Devo Seereeram, Ph.D., P.E.

## Proiect Data

Project Name: Vista Landfill Redesign Iterim Design
Símulation Description: ..... Pond 10
100 Year / 24 Hour Routing and Recovery Analysis w/ infiltration Interim Pond 10
Project Number: ..... 10-2141
Engineer : ..... cms
Supervising Engineer: ..... cms
Date: ..... 01-06-2011
Aquifer Data
Base Of Aquifer Elevation, $[\mathrm{B}]$ (ft datum): ..... 74.00
Water Table Elevation, [WT] (ft datum): ..... 79.00
Horizontal Saturated Hydraulic Conductivity, [Kh] (ft/day): ..... 15.00
Fillable Porosity, [n] (\%): ..... 20.00
Unsaturated Vertical Infiltration Rate, [lv] (fl/day): ..... 5.0
Maximum Area For Unsaturated Infiltration, [Av] ( $\mathrm{ft}^{2}$ ): ..... 35558.0

## Geometry Data

Equivalent Pond Length, [L] (ft): ..... 550.0
Equivalent Pond Width, [W] (ft): ..... 100.0
Ground water mound is expected to intersect the pond bottom

## Stage vs Area Data

| Stage <br> (ft datum) | Area <br> $\left(\mathrm{ft}^{2}\right)$ |
| ---: | ---: |
| 84.00 | 9361.0 |
| 85.00 | 13412.0 |
| 86.00 | 16409.0 |
| 87.00 | 19461.0 |
| 88.00 | 22569.0 |
| 89.00 | 25733.0 |
| 90.00 | 28952.0 |
| 91.00 | 32227.0 |
| 92.00 | 35558.0 |

# Retention Pond Recovery - Refined Method <br> Copyright 2003 <br> Devo Seereeram, Ph.D., P.E. 

## Discharge Structures

## Discharge Structure \#1 is active as weir

Structure Parameters

## Description: overflow from pond 10

Weir elevation, (ft datum): $\quad 90.5$
Weir coefficient: $\quad 3.15$
Weir length, (ft): $\quad 17$
Weir exponent: $\quad 1.5$
Tailwater - disabled, free discharge

Discharge Structure \#2 is inactive
Discharge Structure \#3 is inactive

## Scenario Input Data

Scenario $1::$ pond10 100 yr / 24 Hr routing $w /$ overflow
Hydrograph Type: Multi-basin SCS Hydrograph

## Modflow Options

| Modflow Routing: | Routed with infilitration |
| :--- | :--- |
| Initial Groundwater Table: | default <br> Initial Pond Stage: |
| Boundary Condition: | default |
| Repetitions: | default (constant head) |
|  | 1 |

## Simulation Parameters

Minimum time of concentration for all contributing basins in chain (minutes): 10
Computational time step (minutes): .5
Duration of simulation (hours):

## Contributing Basins

Number of contributing basins: 1
Basin 1

| Basin Name | da 10 |
| :--- | :--- |
| Basin Area (acres) | 8.4 |
| Time Of Concentration (minutes) | 10 |
| DCIA (\%) | 0 |
| Curve Number | 98 |
| Design Rainfall Depth (inches) | 10.6 |
| Design Rainfall Duration (hours) | 24 |
| Shape Factor | UHG 484 |
| Rainfall Distribution | Orange County 100 Year - 24 Hour |

## Ugradient Inflows

Number of upgradient inflow nodes: 0

PONDS Version 3.2.0207

## Retention Pond Recovery - Refined Method Copyright 2003 <br> Devo Seereeram, Ph.D., P.E.

Detailed Results (cont,d.)
:. Scenario 1 :: pond10 100 yr / 24 Hr routing w/ overflow

| Elapsed Time (hours) | Inflow Rate ( $\mathrm{ft}^{3} / \mathrm{s}$ ) | Outside Recharge (ft/day) | Stage Elevation (ft datum) | infiltration Rate ( $\mathrm{fl}^{3} / \mathrm{s}$ ) | Overflow Discharge ( $\mathrm{H}^{3 / 5}$ ) | Cumulative Inflow Volume ( $\mathrm{ff}^{3}$ ) | Cumulative Infiltration Volume ( $\mathrm{ft}^{3}$ ) | Cumulative Discharge Volume ( $\mathrm{t}^{3}$ ) | Flow Type |

PONDS Version 3.2.0207

## Retention Pond Recovery - Refined Method Copyright 2003 <br> Devo Seereeram, Ph.D., P.E.

Detailed Results (cont,d.) :: Scenario $1::$ pond10 100 yr / 24 Hr routing w/ overflow

| Elapsed Time (hours) | Inflow Rate ( $\mathrm{ft}^{3} / \mathrm{s}$ ) | Outside Recharge (ft/day) | Stage Elevation (ft datum) | Infiltration Rate ( $\mathrm{f}^{3} / \mathrm{s}$ ) | Overflow Discharge ( $\mathrm{fl}^{3 / \mathrm{s}}$ ) | Cumulative Inflow Volume ( ft ) | Cumulative infiltration Volume ( $\mathrm{ft}^{3}$ ) | Cumulative Discharge Volume ( $\mathrm{t}^{3}$ ) | Flow Type |
