A "Not Ok" response to a requirement indicates either a potential violation of the corresponding rule or an area of concern that requires more attention. Both potential violations and areas of concern are discussed further at the end of this inspection report.

Item 1.7 - GW results not evaluated as part of this inspection

Item 2.13 - During the inspection, the working face was located in Phase II, Cell II. The operator was placing a 4'+ select waste layer and normal ~10' lift concurrently. A spotter was observed at the base of the working face inspecting the select waste layer.

Item 2.21 - The protective soil on the W slope of Phase I had significant erosion due to recent heavy rains. Operator indicates these soils would be replaced prior to the Phase I closure project being completed.

Item 2.22 - Stained water was observed in the valve box in the new containment area at the Phase I, Cell I lift station. According to facility staff, this water had accumulated there after rainfall and was not the result of leaking pipes or valves. This water will be pumped out and a cover placed on top of the valve boxes to prevent future accumulation.

Item 2.37 - Department staff observed the new well casings placed around MW & CW-8A. Operator indicated these had recently been re-surveyed (since they were heightened) and completion reports would be submitted to the Department soon. The wells had not yet been labeled or locked.

Department staff observed Phase I closure construction activities during the inspection. The facility had completed all outside slopes with cap and cover except for portions of the S slope temp-final TPO cap. Staining was observed on the TPO cap. It appeared that portions of the top of the Phase had established vegetation. The facility had started construction of the new containment areas surrounding each of the pump stations in Phase I. The surrounding stormwater ditches had recently been cleaned out and appeared to functioning OK. The facility had completed construction of the Phase II, Cells 3&4 stormwater diversion project. The new outfall locations were observed and photographed during the inspection.
