Dear Mr. Ford:

We are in receipt of your letter dated April 28, 1992 in regards to the above referenced project. Please review the following responses:

1. **Proof of publication of notice of application as per F.A.C. Section 17-701.030(6), see attachment.**

Proof of publication of notice of application was published in the Sumter County Times on Thursday, May 14, 1992 and on Thursday May 21, 1992. A copy of the advertisement and a notarized letter from the publisher are presented in Appendix A.

2. **Provide documentation of Sumter County's possession of an approved Comprehensive Quality Assurance Plan (ComQAP) for the sampling and analysis as required for the facility. You are requested to work directly with Ms. Sylvia Labie of the QA Section in Tallahassee to obtain approval of the quality assurance plan.**

Sampling of groundwater, leachate and compost is currently being performed under the Quality Assurance Project Plan for a Preliminary Chemical Assessment of Landfill Compost and Leachate for the Sumter County Landfill prepared by Envirolab, Inc. of Ormond Beach, Florida.

May 29, 1992

Sampling of groundwater, leachate and compost will be done by Springstead Engineering, Inc. in accordance with Springstead Engineering, Inc.'s (SEI) Comprehensive Quality Assurance Plan (ComQAP) #920119G. A letter dated May 1, 1992 from Sylvia S. Labie, QA Officer, Quality Assurance Section, FDER, Tallahassee states that ComQAP #920119G has an approved pending status and that work may be performed for the following sampling activities: **Groundwater, Surface Water, Wastewater, Potable Water, Soil, Sediment and Domestic Waste Sludges.** A copy of the letter is presented in Appendix B.

Analysis of the samples shall be performed under Flowers Chemical Laboratories' (FCL) approved ComQAP #860008G.

A compost sampling and analysis QAPP is currently being completed by SEI and FCL.

3. **Updated financial responsibility cost estimates for long-term care of the closed landfill. Approved cost estimates will be forwarded to Mr. Fred Wick of the Solid Waste Section in Tallahassee. You are requested to work directly with him to obtain approval of Sumter County's financial responsibility documents.**

The closed Class I Landfill located at the Sumter County Solid Waste Management Facility was closed in three (3) phases. Certification of closure, closure meaning the cessation of operation (see Rule 17-701.020 (12), F.A.C.), for the separate phases were issued as follows:

Phase I - December 11, 1989;

Phase II - May 24, 1990;

Phase III - March 5, 1990.

SF60-211255 - LONG-TERM CARE
SC60-211181 - LEACHATE TREATMENT
91-1100.00

The site of the existing closed landfill is currently an active site which accommodates the Sumter County Solid Waste Management Facility, including the composting pads and the resource/recovery facility. The operation and maintenance of the site is an ongoing activity which is taken care of by the staff of the facility. The Sumter County Board of County Commissioners allocates funds for operation and maintenance of the facility on a yearly basis and will continue to fund the operation of this facility in the future.

The owners, being the Sumter County Board of County Commissioners are required to provide the Florida Department of Environmental Regulation (FDER) proof of financial responsibility. Since the Class I Landfill is closed, only long-term care cost need to be considered. Long-term care cost include:

1. Land surface care;
2. Gas monitoring;
3. Groundwater monitoring, collection and analysis.

Estimates are not being prepared for providing the above services on a third-party basis since the site is currently active and maintenance and operation is funded yearly by the Board of County Commissioners.

4. Your response to Mary Yeargan's April 28, 1992 attached memorandum. Ms. Yeargan may be contacted at (813) 620-6100, extension 376. Please submit a revised updated groundwater monitoring plan that complies with F.A.C. Rule 17-28.700.

The previously submitted Groundwater Monitoring Plans have been reviewed. The data presented below is new,

most being collected since the most recent plan was submitted.

- a. Monitor well construction details and lithology logs, including elevations, should be provided. Geologic cross-sections, from east to west and north to south, should be constructed that illustrate the various lithologies and their relationships.

A diagram of monitoring well construction details and lithology logs, including elevations, is provided in Appendix C. Also cross-sections, from east to west and north to south, have been constructed that illustrate the various lithologies and their relationships and are presented in Appendix D.

- b. Water level information for each monitor well for each sampling event should be provided in tabular form (including top of casing elevations, depth to water, monitoring interval length, and corresponding water level elevations) and in graphic form showing the interpretation of the groundwater flow direction to verify the direction of groundwater flow and to estimate fluctuations in the water table.

Depths to the groundwater table and elevations of top of pipe have been reduced to provide elevations of the groundwater table as measured during the several sampling events. These data are presented in tabular form in Appendix E and graphically in Appendix F.

- c. A recent potentiometric map for the Floridan aquifer must be provided.

May 29, 1992

SUMTER COUNTY SOLID WASTE FACILITIES

91-1100.00

A copy of the map titled Potentiometric Surface of the Upper Floridan Aquifer, West Central Florida, September 1990 was obtained from the Southwest Florida Water Management District. A copy of the map is presented in Appendix G. Contours indicate the regional direction of groundwater flow in the Upper Floridan Aquifer to be in a general north-northwest direction.

- d. The depth(s) of the trenches within the Closed Class I landfill was not discussed or provided.

The depth of the trenches was to be discussed on page 3 of 15 in The Application for Long-Term Care Permit for the Closed Class I Sanitary Landfill. A typographical error was found and is corrected below.

Landfilling was accomplished by the trench fill method of disposal. Trench work began on the eastern side of the property in June, 1975 and progressed westward. Cells were opened from the north to the south as needed. The trenches were opened to a width of approximately 35 feet with a width depth varying between 15 and 25 feet.

- e. Land use information for the area surrounding the landfill should be provided. A current well survey should be provided.

A map showing the land use for the area surrounding the landfill is presented in Appendix H. A well survey for the surrounding area was requested from the Southwest Florida Water Management District. A copy of the well survey is presented in Appendix I.

- f. A summary of analytical data for all sampling periods should be provided in tabular form. All parameters which have exceeded maximum contaminant levels should be graphically displayed over time to evaluate the trends. Analytical data for leachate indicator parameters should also be graphically displayed over time to evaluate the trends. Once this information is provided, monitoring parameters can be evaluated.

A summary of the analytical data has been prepared and is presented in tabular form in Appendix J. Parameters exceeding the maximum contaminate level are presented graphically in Appendix K.

- g. Are there to be monitor wells associated with the new leachate collection system?

After our evaluation of the existing facility improvements, we see no need for additional monitoring wells, as the existing monitoring well system is adequate. At this time no new monitoring wells are proposed for the leachate treatment system. Based on the location of the existing site monitoring wells, if a contaminant was introduced in the groundwater, it should be detected in the data gathered from existing wells.

- h. The Material Safety Data Sheet (MSDS) for the B.D. Compost Starter should be provided.

Currently, the B.D. Compost Starter is no longer being used at this facility. Our experience has shown that starter is not necessary to initiate the composting process. Sumter County chose not to utilize a starter compound due to the high operation costs associated with these compounds. We have requested a MSDS for the starter but our

May 29, 1992

91-1100.00

request was denied by Ecology Concepts. It is our understanding that Ecology Concepts is anticipating providing starter compound for other facilities in the state. DER should be able to obtain the requested information from a MSDS provided to the other facilities. If DER does obtain this information, we respectfully request that Sumter County be forwarded a copy.

- i. Within Section 3, Leachate Treatment Facility, there was no discussion concerning the testing and disposal of sludges generated in the leachate treatment facility. There was no discussion regarding the testing and monitoring of effluent from the leachate treatment facility. There was no discussion concerning the quantity of treated leachate that will be routed to the existing stormwater retention area and whether the pond can handle the additional flow.

The bio-residuals generated from the leachate treatment process will be blended with the fluff and allowed to compost for processing and sale. Testing and monitoring of leachate effluent exiting the treatment plant will be tested for primary and secondary standards as stated in the response to Mr. Ford's question No. 9. The quantity of treated effluent routed towards the retention pond will vary with weather conditions. In the rainy season, the treatment plant will operate at full capacity with a lesser capacity during normal operation except immediately after rainfall events. The stormwater retention pond was originally designed to hold the runoff from the covered Class I landfill (assumed impervious), and has been enlarged during site improvements to hold the volume of runoff generated from the entire site. The quantity of water directed to the pond from the leachate

91-1100.00

treatment is essentially the runoff from the impervious composting pads and lined ponds, therefore, it will not be necessary to increase the capacity of the existing retention pond.

- j. All sampling and analyses should be conducted in accordance with a Department approved Comprehensive Quality Assurance Plan (ComQAP) to comply with the requirements of Chapter 17-160, F.A.C. Documentation of a Department approved ComQAP for all sampling and analyses should be provided.

As previously stated in question 2, above, sampling of groundwater, leachate and compost will be done by Springstead Engineering, Inc. in accordance with Springstead Engineering, Inc.'s Comprehensive Quality Assurance Plan (ComQAP) #920119G.

Analysis of the samples shall be performed under Flowers Chemical Laboratories approved ComQAP #860008G

- k. Section 17-4.050(3), F.A.C., states that where required by Chapter 471 or 492, Florida Statutes (F.S.), applicable portions of permit applications and documents which are submitted to the Department for public record shall be signed, sealed and dated by the professional(s) who prepared or approved them. Geological portions of documents and submittals should be signed, sealed and dated by a Florida registered professional geologist in accordance with Chapter 492, F.S., and engineering portions of documents and submittals should be signed, sealed and dated by a Florida registered professional engineer in accordance with Chapter 471, F.S.

The applications for the referenced permits were prepared by a team of registered professionals including engineers, surveyors and geologists. The certification of a professional engineer was required on the application forms.

5. A fire safety survey conducted and documented by the local fire protection authorities for the subject facilities.

The fire safety survey was requested on March 25, 1992 and performed on Tuesday May 26, 1992 by the Lake Panasoffkee Fire Department. The results of the survey are being prepared and will be forwarded to you upon receipt. Assistant Fire Chief Mr. Roger Cheatham is the contact person and he can be reached at 904-793-4957.

6. Describe the "temporary contingency" use of the lined cell. Solid waste that is not milled must be covered within 24 hours of transferred to a permanent Class I solid waste disposal facility within 48 hours. This Department required the location of the permanent disposal site for residuals (30% of the total solid waste or 20 tons) not recycled or composted?

All materials stored in the Class I cell are intended to be removed and processed into compost, landfilled, processed into other usable materials or incinerated. Plans are underway for submittal of improvements on the adjacent forty acres south of the existing facility to provide additional facilities for these activities. Submittals for the improvements will be made to DER within 6 months for DER approval and permitting. Sumter County has already approved the zoning change necessary for the proposed improvements.

Plans in 6mo -

fluff removal

Composting

7. How long will it take to empty the lined cell of fluff with use of the existing composting areas only?

It is anticipated that it will take approximately 3 to 4 years to completely empty the lined cell of fluff using the existing composting pads. This time frame can be reduced when the additional composting pad to be built on the forty acre expansion south of the existing facility is approved and constructed. It is anticipated that this additional pad will initially be dedicated to emptying the fluff from the cell. Sumter County recently approved a zoning change for the proposed forty acre expansion allowing for timely design, permitting and construction.

8. Provide surveyed cross-sections of the existing compost pad areas located over the closed landfill.

Surveyed cross-sections of the existing compost pad areas are presented in Appendix M.

Leachate Treatment

9. Describe in detail your plans for effluent discharge. Treated leachate may not go to the percolation pond or surface water management system unless data indicates that the discharge will meet drinking water standards.

The conceptual plan for effluent discharge is to provide treatment to meet drinking water standards and then route the treated effluent through the existing stormwater system for ultimate disposal in the water retention area located at the northeast corner of the site. (See answer 4-i)

10. Provide water balance calculations to show the volume of leachate that can be evaporated by recirculation.

WATER BALANCE AT SUMTER COUNTY SOLID WASTE FACILITY

General Equation: $P - E - T - CU - R = \Delta S$

Where : P = Precipitation
 E = Evaporation
 T = Transpiration
 CU = Consumptive Use
 R = Runoff
 ΔS = Change in Storage

For the Sumter County Solid Waste Facility, the Precipitation is 51.40 inches/year or 0.141 inches/day and the Evaporation is 59.53 inches/year or 0.163 inches/day. The Consumptive Use is determined based on SWFWMD - Agricultural Consumptive Use as presented in Hydroscope, October 1975. The volume of water evaporated by consumptive use is determined by the following equation:

$$CU_T = (Q_p * Ka) + (CU_c * A)$$

Where: CU_T = Total Consumptive Use (gpd)
 Q_p = Quantity of Water Pumped (gpd)
 Ka = Irrigation Loss Factor
 CU_c = Consumptive Use of Crop (gpd)
 A = Area of Crop (acres)

For leachate treatment, the transpiration and runoff terms of the water budget are equal to zero. In addition, the consumptive use of crop term in the consumptive use equation is also equal to zero. The irrigation loss factor for daytime sprinkling is equal to 0.25 and the irrigation loss factor for night-time sprinkling is equal to 0.10. An average irrigation loss of 0.175 was assumed for calculating a "daily" budget.

The budget general equation reduces to

May 29, 1992

SUMTER COUNTY SOLID WASTE FACILITIES
PERMIT NO.:

S060-211179 - SOLID WASTE COMPOSTING
WT60-211205 - WASTE TIRE STORAGE
SO60-211182 - M.R.F.
SF60-211255 - LONG-TERM CARE
SC60-211181 - LEACHATE TREATMENT
91-1100.00

$$(0.141 - 0.163) \text{ in/day} - (Q_p * 0.175) \text{ gal/day} = \Delta S$$

or

$$-0.022 \text{ in/day} - (Q_p * 0.175) \text{ gal/day} = \Delta S$$

Using the defined terms, the volume of water lost to consumptive use would be based on the number of gallons of leachate pumped per day times 0.175.

Using recirculation at a pumping rate of 150 gallons/minute and assuming that the leachate pond is full and that the composting pad is completely covered with a layer of water, the losses are as follows:

EVAPORATION

$$\begin{aligned} \text{Existing pad area} &= 190' * 320' = 60,800 \text{ ft}^2 \\ \text{Existing pond area} &= 250' * 50' = \frac{12,500 \text{ ft}^2}{73,300 \text{ ft}^2} \end{aligned}$$

$$73,300 \text{ ft}^2 * 0.00183 \text{ ft/day} = 134.4 \text{ ft}^3/\text{day}$$

CONSUMPTIVE USE

$$216,000 \text{ gal/day} * 0.175 = 37,800 \text{ gal/day}$$

$$\text{or } 5,053.5 \text{ ft}^3/\text{day}$$

The total volume of leachate that can be evaporated by recirculation is 5,187.9 ft³/day or 38,800 gallons/day.

This calculation does not include a transpiration loss due to the composting process. The volume lost to evaporation would increase if the additional composting pads and ponds are implemented due to an increase in wetted plan area and an increase in the pumping rate of leachate required to cover the three pads.

91-1100.00

11. Provide calculations indicating the time required to remove and eliminate leachate stored in the existing lined pond and cell by recirculation only.

The volume of leachate which can be evaporated through recirculation, based on a water budget, was calculated in the previous question. The exact volume of leachate in the existing lined pond and cell is unknown. The volume of the existing leachate pond, if filled to the overflow, is 49,761 ft³. Assuming that the lined cell has a volume of leachate equal to one third of the volume of the leachate pond, a total volume of 66,348 ft³ would be present in the cell and pond. Using these values, the time required to remove and eliminate the leachate in the lined cell and existing leachate pond by recirculation is as follows:

$$66,348 \text{ ft}^3 / 5187.9 \text{ ft}^3/\text{day} = \underline{12.8 \text{ days}}$$

12. Describe how the planned leachate equalization basin will meet the current requirements for a double liner as specified in F.A.C. Rule 17-701.050.

The leachate equalization basin will be designed as a composite liner system having a 60-mil flexible membrane liner overlying an 18-inch thick layer of compacted soil as shown in Figure 1.

Waste Tire Storage

13. Indicate the location for waste tire storage on a drawing.

The location of the waste tire storage area is indicated on the drawing presented in Appendix N.

May 29, 1992

91-1100.00

14. Describe how waste tires are transported. Are the waste tires processed before transporting? Where are the waste tires taken for processing and/or disposal?

The tires are transported by truck. The truck bears Florida Registered Waste Tire Collector decal No. 1252. Photographs of the vehicle and a letter dated April 15, 1992 from Bill Parker, Solid Waste Section, FDER, Tallahassee, detailing specific conditions to follow for waste tire collectors, are presented in Appendix O.

The last load of waste tires was transported to Geotech - F.C.S. Fuel Preparation Facility (Permit #WT27-175366) in Brooksville, Florida. Other permitted Waste Tire Processing Centers may be used in the future due to time and cost considerations.

Waste tires are not processed at the Sumter County Solid Waste Management Facility before transporting.

Long-Term Care

15. Please provide professional conclusions and recommendations regarding the evaluation of the landfill closure including:

- a. Effectiveness and results of a groundwater investigation.

The groundwater has been monitored on a continuing basis. Turbidity and color were consistently above the Maximum Contaminate Level (MCL) given in Rule 17-500, F.A.C. Elevated results were also reported for the background well (Well No. 2) for these two (2) parameters. Cadmium, chromium, and sometimes nitrates occasionally were reported close to above MCL. Again, the background well showed the elevated levels.

May 29, 1992

SUMTER COUNTY SOLID WASTE FACILITIES
PERMIT NO.:

SC60-211181 - LEACHATE TREATMENT
91-1100.00

It is our opinion that the results of the groundwater monitoring program indicate that contaminates are not appreciably being introduced into the groundwater as a result of the operation of this facility.

b. Effects of surface water runoff, drainage patterns and existing stormwater controls.

It is our opinion that the drainage patterns and existing stormwater controls are suitable for the site and that the surface water management system is performing satisfactorily and is not in need of modification or improvements.

c. Extent and effects of methane gas migration.

The purpose of measuring methane gas generated at the Sumter County Landfill site was to determine if landfill gas was moving laterally, possibly causing a threat of explosion due to a buildup of gas in nearby structures or migration to off-site locations.

Porous soils formerly used for daily cover in the closed portions of the landfill allow generated gas to easily move vertically. These soils do not indicate the possibility for the creation of a trap or seal forcing the generated gas to move laterally.

In conjunction with the closure process, a passive gas venting system was designed and installed to allow the vertical release of any gases generated. This system is working satisfactory at this time.

The results of a field test for gas migration were given in a report dated February 2, 1988. This

report is presented in Appendix K of the Appendices accompanying the Applications for Permit to Operate Composting Facility, Permit to Operate Resource Recovery Facility, Waste Tire General Permit and Permit to Maintain Closed Class I Sanitary Landfill submitted March 30, 1992. The gas readings were reported negative; therefore, it is concluded that any gases being generated by decomposing materials are being liberated vertically through porous soils and not migrating laterally.

- d. Type and condition of existing cover and its effectiveness as a leachate control mechanism.

All cover materials were installed in accordance with FDER regulations with impermeable materials or asphalt and have been maintained in their original condition. The cover is acting as designed and is effective in preventing the vertical percolation of surface water into the closed fill. It is our opinion that the existing cover is an effective leachate control mechanism.

Closure

Applications for five separate permits have been submitted simultaneously in the original report and have been addressed in this request for additional information. We request that each permit be issued individually after all the requested information is reviewed and approved.

In particular, we request that the permit for leachate treatment be processed as expediently as possible so that we can begin the necessary tasks to put a system in operation. As you know, existing facilities are not in operation at this time pending the permitting, design and construction of the proposed system. Your help in facilitating this permit would be greatly appreciated.

We hope that the provided information meets your needs at the present time. Should you have any additional questions, or if you require additional information, please contact our office.

Very truly yours,

Proof of Publication

from the
SUMTER COUNTY TIMES
Bushnell, Sumter County, Florida
PUBLISHED WEEKLY

FILED

MAY 27 1992

IN THE OFFICE OF
BOARD COUNTY COMMISSIONERS
SUMTER COUNTY
BUSHNELL, FLORIDA

STATE OF FLORIDA
COUNTY OF SUMTER

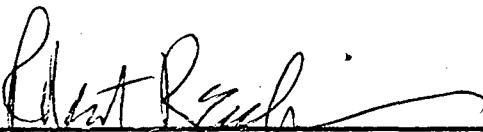

Before the undersigned authority personally appeared

ROBERT REICHMAN

of the Sumter County Times, a newspaper published weekly on Thursday at Bushnell in Sumter County, Florida; that the attached copy of advertisement being a public notice in the matter of NOTICE OF APPLICATION SOLID WASTE

Court, was published in said newspaper in the issues of
MAY 14, 21, 1992 635

Affiant further says that the Sumter County Times is a newspaper published at Bushnell in said Sumter County, Florida, and that the said newspaper has heretofore been continuously published in Sumter County, Florida, each week and has been entered as second class mail matter at the post office in Bushnell in said Sumter County, Florida, for a period of one year next preceding the first publication of the attached copy of advertisement; and affiant further says that he/she has neither paid nor promised any person, firm or corporation any discount, rebate, commission or refund for the purpose of securing this advertisement for publication in the said newspaper.

PERSONALLY KNOWN TO ME
BRENDA G. LOCKLEAR

NOTARIAL PRACTICE

Sworn to and subscribed before me this 21st
day of MAY A.D. 19 92

(SEAL) Notary Public

SCT-635-0521
PUBLIC NOTICE
State of Florida
Department of
Environmental Regulation
Notice of Application
The Department announces
receipt of an application for permit from Sumter County Public Works for permits for solid waste
composting, waste tire storage,
materials recovery, long-term
care, and leachate treatment at
the closed Sumter County Landfill,
located near I-75 and C.R. 470,
north of Bushnell, Sumter County,
Florida.

This application is being pro-
cessed and is available for public
inspection during normal business
hours, 8:00 a.m. to 5:00 p.m., Mon-
day through Friday, except legal
holidays, at the Department of En-
vironmental Regulation, South-
west District Office, 4520 Oak Fair
Boulevard, Tampa, Florida 33610-
7347.

Published two (2) times in
The Sumter County Times:
May 14 and 21, 1992

SF,

James A. Dunaway
Springstead Engineering, Inc.
727 South 14th Street
Leesburg, FL 34748

SUBJECT: Quality Assurance Review; Springstead Engineering, Inc.
Comprehensive QA Plan #920119G
First Submittal

Dear Mr. Dunaway:

The Statement of Intent for the referenced Comprehensive QA Plan was received on April 30, 1992. The CompQAP for your organization has limited approved pending status for the following sampling activities: Groundwater, Surface Water, Wastewater, Potable Water, Soil, Sediment and Domestic Waste Sludges. This means that your organization may begin performing work for these specific activities in DER programs or activities that have been designated as Category 2 or 3 by the QA Rule.

Sections 6, 9 and 11 must be revised to reflect the use of the DER Interim SOPs. The instructions on how to revise your document are discussed in DER QAS #91-06 (attached). Before you submit these changes, please review your entire document to assure that all relevant CompQAP Review Checklist requirements for the other 13 sections have been discussed and make any additional corrections.

The revisions to the CompQAP must be received by the QA Section on or before August 7, 1992. Approval pending will automatically expire on that date unless you advise the QA Sections of any delays.

The DER Quality Assurance Section will schedule the laboratory portion of your QA Plan for review and will be issuing separate approvals for sampling and analysis capabilities.

If you have any questions concerning this matter, please call John Watts at (904) 488-2796.

Sincerely,

Sylvia S. Labie, QA Officer
Quality Assurance Section

SUBJECT: Well Construction Permit Listing

Dear Mr. Dunaway:

We have received your request for a permit listing
for areas outlined in your letter dated May 15, 1992.

If I can be of any further assistance, please contact
this office.

Sincerely,

A handwritten signature in cursive ink that reads "Joanne P. Pacini".

RE: Waste Tire Collector Registration
CO ID # 1027

Dear Sirs:

Sumter County Public Works, has been registered with the Department of Environmental Regulation as a Waste Tire Collector. Enclosed are the decals requested in your Waste Tire Collector Registration application.

Waste Tire Collectors are subject to the following specific conditions:

1. The decal supplied by the Department shall be displayed on the outside of the drivers front door. Common carriers may display the decal on a removable panel.
2. Records shall be maintained for three years and will be available for inspection by Department personnel during normal business hours. The records will be summarized quarterly and will contain the following:
 - a. Quantity of tires collected.
 - b. Where and from whom tires were collected.
 - c. Where the waste tires were deposited.
 - d. Receipts or other written materials documenting the above.
3. A Waste Tire Collector Annual Report, DER Form 17-711.900(5) be submitted by March 1 of each year.
4. A Registration Renewal Application, DER Form 17-711.900(1) shall be submitted by March 1 of each year to renew this registration.
5. A Waste Tire Collector shall leave waste tires and processed tires for storage and disposal only in a permitted waste tire processing or collection facility, at a permitted solid waste management facility, or at another site approved by the Department.
6. Any person who fails to comply with these conditions is subject to having their Waste Tire Collector Registration revoked, as well as other penalties provided by law.
7. When a Waste Tire Collector Registration number expires or is revoked, the registration decals shall be removed from all vehicles immediately.

If you need further information, please call Frances Keith of this office, telephone 904-922-6104.

Sincerely,

Bill Parker, Engineer
Solid Waste Section

WASTE TIRE COLLECTOR DECALS

Listed below are the Waste Tire Collector Decals assigned to your vehicles. If you wish to change the vehicle assignment you must note the change on this form and return it to the Department of Environmental Regulation. Please keep your vehicle information current by notifying us of any changes. The decals expire April 1, 1993. Thank you.
