RE: **Southeast County Landfill
Laboratory Analytical Results
Initial Assessment Monitoring Plan
Report No. 31 – March 2013**

Dear Mr. Morris:

The Hillsborough County Public Utilities Department (County) is pleased to provide the analytical results from the monthly sampling event conducted as part of our continuation of the Initial Assessment Monitoring Plan (IAMP). The IAMP was developed to address the potential impacts to groundwater from the sinkhole in Phase VI of the Southeast County Landfill (SCLF), which was discovered on December 14, 2010. These sampling activities were conducted on March 7- 8, 2013, and the samples collected were analyzed by our contracted laboratory, Test America, Inc.

Representative samples were collected from eleven (11) on-site groundwater monitoring wells and two (2) on-site limited use potable supply wells. Samples collected from the groundwater monitoring wells and the on-site supply wells were analyzed for total dissolved solids (TDS), chloride, total ammonia, arsenic, iron, sodium, and five (5) field parameters. The following paragraphs summarize the parameter specific results pertinent to the evaluation of potential water quality impacts from the sinkhole at the SCLF.

pH

The surficial aquifer monitoring wells continue to exhibit pH values below the Secondary Drinking Water Standard (SDWS) acceptable range of 6.5 to 8.5 pH units. The pH values in the surficial range from 4.35 to 5.60 pH units. The pH values within the surficial aquifer across the SCLF have historically been observed below the acceptable range, and the observed values are consistent with the historical and background water qualities. The pH values observed in each of the four (4) upper Floridan groundwater monitoring wells and the two (2) supply wells were within the acceptable range, and consistent with historical data for the site.

Turbidity

Turbidity values are generally low in the monitoring wells that have been part of the permit required sampling program at the SCLF. During this sampling event, values ranged from 0.26 to 2.71 Nephelometric Turbidity Units (NTU) in the surficial aquifer wells, and from 0.04 to 7.09 NTU in the upper Floridan wells.

Conductivity

The conductivity values in most of the groundwater monitoring wells sampled are relatively low and have remained consistent with historical values associated with the SCLF. The conductivity values observed in the surficial aquifer ranged from 139 to 591 micromhos per centimeter (umhos/cm). The conductivity values observed in the upper Floridan groundwater monitoring wells at the site are historically low. However, during this sampling event TH-72 continues to exhibit an elevated conductivity value of 1,234 uhmos/cm.

Total Dissolved Solids (TDS)

The TDS values observed in the surficial aquifer groundwater monitoring wells were all observed below the SDWS of 500 mg/l. The TDS observed in TH-72 was above the SDWS at 770 mg/l.

Chloride

Chloride values in the surficial aquifer groundwater monitoring wells ranged in concentration from 24 to 170 mg/l, which are all below the SDWS of 250 mg/l. The chloride value observed in TH-72 continued to be elevated this month with a result of 290 mg/l. Chloride values are historically very low in the upper Floridan aquifer monitoring wells and limited use potable supply wells.

Sodium

Sodium values in the surficial aquifer groundwater monitoring wells ranged in concentration from 11 to 35 mg/l, which are all below the PDWS of 160 mg/l. The sodium value observed in TH-72 was 110 mg/l, which was also below the PDWS.

Arsenic

The arsenic observed in TH-58 during this sampling event was 0.024 mg/l, which is above the Primary Drinking Water Standard (PDWS) of 0.01 mg/l. Arsenic has been present in TH-58 at almost the same concentration for well over ten years. Although significant changes in water quality were observed in TH-58 shortly after formation of the sinkhole, the arsenic values continued to remain very stable. This observation continues to support the position that the arsenic is not attributable to the landfill or the sinkhole, and is likely naturally occurring within the soils surrounding the well. Arsenic is potentially being mobilized in the anaerobic environment below the lined landfill.

Iron

Total iron concentrations in the seven (7) surficial aquifer wells were all observed above the SDWS of 0.3 mg/l. The elevated iron concentrations observed in the surficial aquifer wells at specific locations across the site are consistent with background water quality, and are likely naturally occurring and/or the result of past strip mining activities. The concentrations of iron in the upper Floridan wells were below the SDWS, except in TH-72, which exhibited a concentration of 1.1 mg/l, respectively.

Total Ammonia

The upper Floridan well TH-72 continues to exhibit ammonia above the GCTL of 2.8 mg/l at a concentration of 11 mg/l. In addition, surficial aquifer groundwater monitoring wells TH-28A and TH-74 also exhibited ammonia slightly above the GCTL, both with a concentration of 3 ug/l. The source of the ammonia observed in the groundwater in the immediate vicinity of the sinkhole is likely attributable to groundwater migrating downward through waste in the sinkhole and the fluids associated with the grout materials introduced into the subsurface to stabilize the area.

Groundwater Elevations and Direction of Flow

The County has collected monthly groundwater and surface water elevation data at sixty-three (63) points across the site, including twenty eight (28) surficial aquifer wells, five (5) upper Floridan (limestone) aquifer wells, twenty three (23) piezometers, and seven (7) surface water sites. The elevation data is collected the day before the IAMP sampling event, which was March 6, 2013. However, piezometer P-5D was observed to be filled with soil approximately 15.6 feet below the top of casing (ft btoc). It appears that this piezometer has structurally failed and the County would request from the Department to properly abandon this monitoring point.

No significant changes to the patterns of flow in the surficial aquifer were noted in the March data set and the diagram is consistent with the observations over the period of record. The general direction of flow within the surficial aquifer has historically been to the west northwest across the Southeast County Landfill site. The elevations observed within the wells

closest to the sinkhole indicate that flow patterns may be somewhat affected, which would not be unexpected. However, the overall direction of flow remains toward the west/northwest across the site.

Conclusions

The water quality observed in the March 2013 sampling event continues to indicate the wells closest to the sinkhole exhibit changes in water quality. Based on the proximity of the wells and the trends observed, it is apparent that these impacts are likely attributable to the waste within the sinkhole and the fluids introduced during the grouting activities.

The impacts observed in the upper Floridan aquifer monitoring well, TH-72, continue to exhibit elevated concentrations of conductivity, TDS, chloride, ammonia, iron and sodium. These changes in water quality indicate that the sinkhole is providing a downward conduit for contaminants. These impacts were not unexpected within the upper Floridan / Limestone aquifer.

Recommendations

As agreed during our discussions with the FDEP Southwest District, the County has installed two additional upper Floridan / Limestone aquifer monitoring wells in the down gradient direction in order to evaluate the potential horizontal extent of the impacts observed in TH-72. The location of these wells is approximately 200-300 feet west/southwest of the sinkhole and TH-72. The two new wells are designated as TH-76 and TH-77, and a well completion report with a revised IAMP location map will be provided for your review once completed.

Furthermore, The Department granted approval to the County via email on May 1, 2013 for the proposed changes in the monitoring program beginning with the May 2013 sampling event. Upper Floridan monitoring wells TH-72, TH-76, and TH-77 will continue to be monitored on a monthly schedule, and surficial aquifer monitoring wells, TH-73, TH-74, and TH-75 will be monitored on a quarterly schedule.

The County conducted the quarterly sampling event for the six (6) wells on May 2, 2013. The June and July sampling events will only include the three upper Floridan wells. As requested by the Department, reporting of each monthly data set will be submitted to the Department by the end of the following month.

Enclosed for your review please find a site location map depicting the wells sampled, the water quality data summary table for the March 2013 sampling event, a groundwater elevation data table, a groundwater contour and flow diagram, the historical data tables for each well sampled with data from December 2010 through February 2013, and the complete analytical data report from our contracted laboratory, Test America, Inc.

Mr. John Morris, P.G.

ND = NO DATA (Not analyzed)

New survey data beginning with 10/4/2012.

u = parameter was analyzed but not detected

j3 = estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.

i = reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

New survey data beginning with 10/4/2012.

u = parameter was analyzed but not detected

i = reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

j3 = estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Case Narrative

Client: Hillsborough County Public Utilities Dep
Project/Site: SELF IAMP Monitoring Wells

TestAmerica Job ID: 660-53093-1

Job ID: 660-53093-1

Laboratory: TestAmerica Tampa

Narrative

Job Narrative 660-53093-1

Comments

No additional comments.

Receipt

The samples were received on 3/7/2013 4:05 PM and 3/8/2013 3:48 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.1° C and 5.0° C.

Metals

No analytical or quality issues were noted.

General Chemistry

Method 350.1: The matrix spike (MS) recovery for batch 269497 was outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

No other analytical or quality issues were noted.

Definitions/Glossary

Client: Hillsborough County Public Utilities Dep
Project/Site: SELF IAMP Monitoring Wells

TestAmerica Job ID: 660-53093-1

Qualifiers

Metals

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

General Chemistry

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.

Glossary

Abbreviation These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
