Subject: First Semi-Annual Groundwater Monitoring Report 2013
Citrus County Central Class I Landfill
WACS ID# SWD/09/39859
Permit No. 21375-018-SO/01
CDM Smith Project #71138-94426

Dear Mr. Morris:

On behalf of Citrus County, and as stipulated in the Operations Permit issued on June 4, 2012, CDM Smith is providing the following report documenting the groundwater analytical results from the First Semi-Annual groundwater sampling event in 2013 at the Citrus County Central Class I Landfill. The routine sampling event was performed from January 22 to January 24, 2013 and a re-sampling event was performed on February 20, 2013. Attached are two copies of the report. Section 8 of the report contains a CD with electronic files associated with the report, which includes laboratory analytical reports and ADaPT files. The ADaPT EDD files have also been forwarded by e-mail to Clark Moore's attention at Clark.B.Moore@dep.state.fl.us in the FDEP Tallahassee office.

Please contact me if you have any questions or need additional information.

Sincerely,

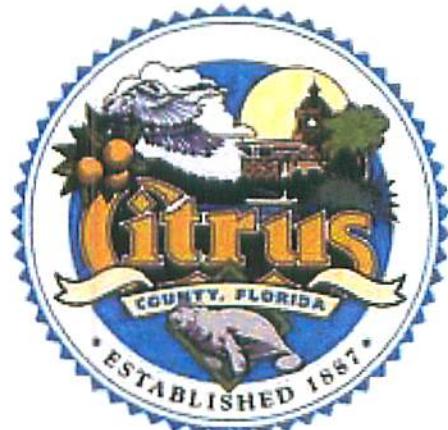

David R. Rojas, P.G.
Environmental Scientist
CDM Smith Inc.

Section 1

Introduction

The first semi-annual sampling event of 2013 for the Citrus County Central Class I Landfill (WACS Facility ID SWD/09/39859) was initiated in January 2013. The initial sampling was performed on January 22, 23, and 24, 2013. A re-sampling event was performed on February 20, 2013 to collect a groundwater sample from monitor well MW-6 and to re-sample well MW-14 to verify the concentration of iron detected in the sample collected in January. The water quality samples were collected and analyzed by personnel from TestAmerica Laboratories. Static water levels were measured on January 22, 2013, by CDM Smith, Inc. (CDM Smith) personnel.

The current operations permit (21375-018-SO/01) requires that groundwater samples be collected semi-annually from two background monitor wells (MW-3 and MW-7), nine compliance monitor wells (MW-10, MW-11, MW-12, MW-13, MW-14, MW-15, MW-17, MW-20 and MW-21), two assessment monitor wells (MW-20 and MW-21), and one intermediate monitor well (MW-6). In addition, static groundwater level measurements are required to be collected in these 14 wells and 11 piezometers (MW-1R, MW-2, MW-5, MW-8R, MW-9, MW-16, MW-AA, MW-B, MW-E, PZ-1, & PZ-2).

All groundwater samples were analyzed in accordance with the permit conditions. Groundwater samples collected from compliance and background wells were analyzed for ammonia, chlorides, nitrate, total dissolved solids (TDS), iron, mercury, sodium, and parameters listed in 40 CFR, Part 258, Appendix I. Groundwater samples collected from assessment wells were analyzed for benzene, methylene chloride, and vinyl chloride. The groundwater sample collected from the intermediate monitor well was analyzed for ammonia, chlorides, fecal coliform, nitrate, total dissolved solids (TDS), total trihalomethanes, iron, mercury, sodium, and parameters listed in 40 CFR, Part 258, Appendix I. Specific conductivity, pH, temperature, dissolved oxygen (DO), turbidity, and temperature were measured in groundwater samples in the field. Colors and sheens were noted as appropriate.

In accordance with Specific Condition E.10.a of the operations permit for the facility issued by the Florida Department of Environmental Protection (FDEP) on December 20, 2010, and Chapter 62-701.510(9)(a), this semi-annual report contains the following:

- Section 2 – Summary of Exceedances and Recommendations
- Section 3 – Groundwater Contours
- Section 4 – Chain of Custody Forms
- Section 5 – Water Level Data
- Section 6 – Water Quality Monitoring Certification (FDEP Form # 62-701.900(31))
- Section 7 – Field Sampling Logs
- Section 8 – PDF copy of Laboratory Report and Laboratory and Field Electronic Data Deliverable (EDD) and Error Logs (ADaPT report)

Section 2

Summary of Exceedances and Recommendations

A summary of the First 2013 Semi-annual Groundwater sampling event exceedances of groundwater quality criteria is provided in **Table 2-1**. Based on evaluation of the data from the January 2013 monitoring event, continued monitoring in accordance with the current permit is recommended.

2.1 pH

Measured values of pH were below the acceptable Secondary Drinking Water Standard (SDWS) range (6.5 to 8.5 S.U.) in the samples from all of the wells except MW-11, MW-12, and MW-14. The pH values measured in these three wells (6.79, 6.76, and 6.65, respectively) were only slightly above the low end of the acceptable range. Although the pH values measured in the other wells are below the low end of the acceptable range, they are comparable to historical values reported. In addition, the pH of the groundwater in both of the background wells at the site was below the 6.5 S.U. criterion.

2.2 Iron

The concentrations of iron exceeded the SDWS MCL established in Chapter 62-550, F.A.C. in samples collected from compliance wells MW-10, MW-12, MW-13, MW-14, MW-15, MW-17, MW-20, and MW-21. The concentrations of iron in the samples from, MW-10, MW-12, MW-13, MW-15, MW-17, and MW-21 were generally consistent with concentrations of iron historically detected in samples from these wells. The concentration of iron in the sample from MW-14 was not confirmed during the February re-sampling. The concentration of iron detected in the sample collected from MW-14 in February 2013 was 210 ug/L, which is consistent with concentrations of iron historically detected in samples from this well. The concentration of iron in the sample from MW-20 was anomalously high.

The concentrations of iron in the samples from the intermediate well (MW-6) and background well MW-7 also exceeded the SDWS MCL. The concentration of iron has been consistently increasing in background well MW-7 since 2010.

2.3 Organic Compounds

Benzene (MW-10 and MW-21), bromodichloromethane & dibromochloromethane (MW-6), and vinyl chloride (MW-6, MW-10 and MW-21) were the only organic compounds detected in concentrations that exceeded Primary Drinking Water Standard (PDWS) MCLs in the groundwater samples collected in January 2013. Historically, these parameters generally exceeded PDWS MCLs in samples from these wells.

Although the concentrations of bromodichloromethane, dibromochloromethane and vinyl chloride in the sample from MW-6 were slightly higher during this monitoring period than were detected in the sample collected from this well during the July 2012 sampling event, concentrations above the current concentrations have been detected in previous samples from MW-6.

Table 2-1 Summary of Groundwater Criteria Exceedances January 2013 Sampling Event

Parameter	MCL/GCTL	Units	Well No	Result
Background Wells				
pH	6.5 - 8.5	S.U.	MW-3	5.19
			MW-7	5.29
Iron, total	300	ug/L	MW-7	1,400
Compliance Wells				
pH	6.5 - 8.5	S.U.	MW-10	4.36
			MW-13	5.03
			MW-15	4.69
			MW-17	4.95
			MW-20	6.15
			MW-21	4.74
Iron, total	300	ug/L	MW-10	3,700
			MW-12	2,700
			MW-13	2,700
			MW-14	210†
			MW-15	9,000
			MW-17	7,700
			MW-20	85,000
			MW-21	1,200
Iron, dissolved	300	ug/L	MW-10	3,000
			MW-21	820
Benzene	1.0	ug/L	MW-10	1.6
			MW-21	2.5
Vinyl Chloride	1.0	ug/L	MW-10	1.7
			MW-21	2.3
Intermediate Well				
pH	6.5 - 8.5	S.U.	MW-6	4.49*
Iron, total	300	ug/L	MW-6	1,800*
Bromodichloromethane	0.6	ug/L	MW-6	1.7*
Dibromochloromethane	0.4	ug/L	MW-6	1.6*
Total Dissolved Solids	500	mg/L	MW-6	530*
Vinyl Chloride	1.0	ug/L	MW-6	1.9*
Assessment Wells				
pH	6.5 - 8.5	S.U.	MW-18	4.79
			MW-19	5.69

Notes:

MCL = Maximum Contaminant Target Level (Chapter 62-550, F.A.C.)

GCTL = Groundwater Cleanup Target Level (Chapter 62-777, F.A.C.)

† = This result was from a re-sample collected from MW-14 on February 20, 2013. The initial result was 420 ug/L

* = Groundwater sample was collected on February 20, 2013

S.U. = Standard Unit

mg/L = Milligram per Liter

ug/L = Microgram per Liter

Although the concentrations of benzene and vinyl chloride detected in MW-10 do not represent the minimum values detected in this well, they were lower than were detected in the samples from this well in January 2012 and July 2012. Over the past three sampling events, there has been a decreasing trend in concentrations of benzene and vinyl chloride in well MW-10.

Although the concentration of benzene detected in MW-21 was slightly higher during this monitoring period than was detected in this well during the July 2012 sampling event, concentrations of benzene above the current level have been detected in MW-21. The concentration of vinyl chloride detected in MW-21 was the highest concentration detected in this well since it was installed in 2011. The concentrations of these organic compounds in samples collected from these wells should continue to be evaluated as routine monitoring continues.

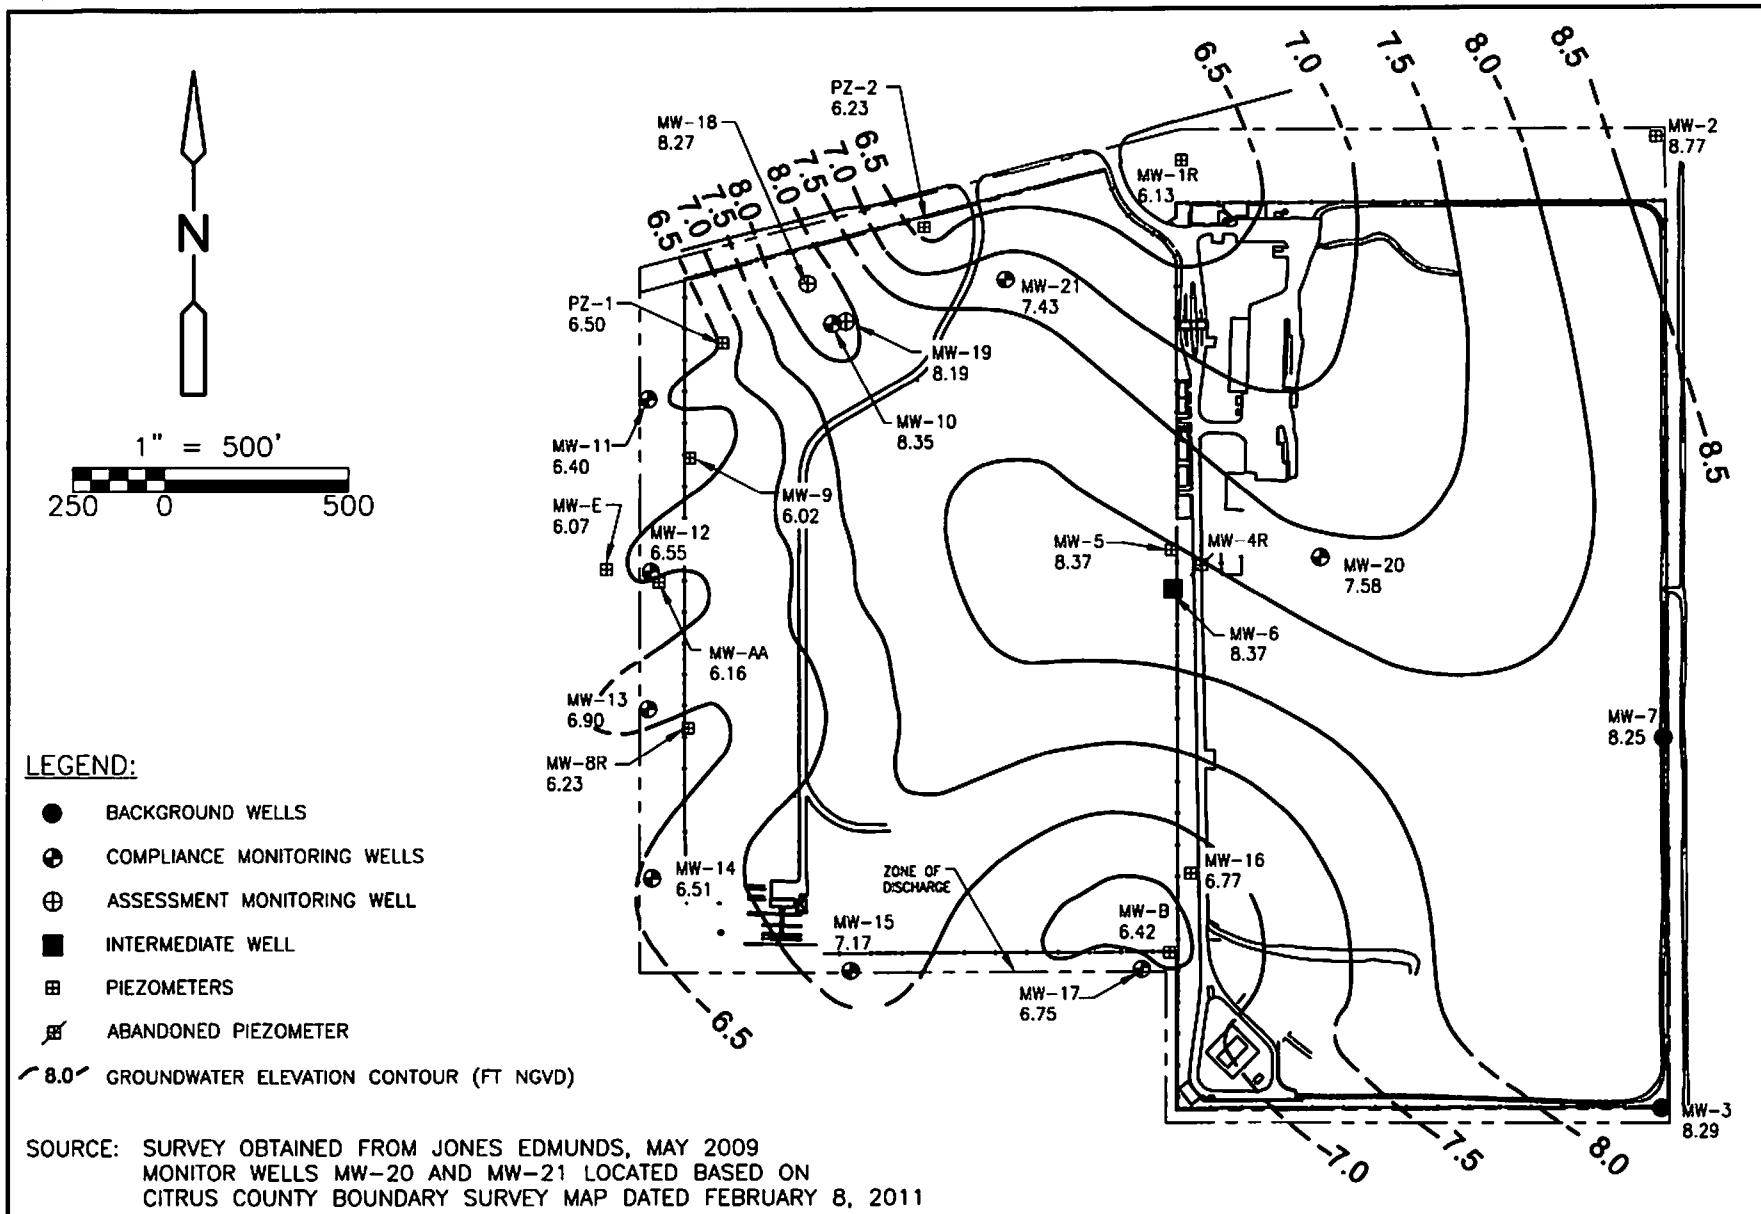

2.4 General Chemistry

The concentration of TDS slightly exceeded the MCL in the sample from intermediate well MW-6. Although this is the first time TDS has exceeded the MCL in this well since 2006, higher concentrations have historically been detected in samples from this well.

Section 3

Groundwater Contours

Static groundwater levels were measured by CDM Smith personnel on January 22, 2013. A contour map is provided as **Figure 3-1**. Water level data are provided in Section 5.

Section 4

Chain of Custody Forms

Chain of custody forms for the groundwater samples collected by TestAmerica Laboratory personnel are provided in this section.

Water Level Data

Static water level data collected by CDM Smith on January 22, 2013, are summarized in **Table 5-1**. In accordance with the permit requirements, these data were used to prepare the groundwater level contour map (Figure 3-1).

Table 5-1 Water Level Data Collected at Citrus County Central Class I Landfill

Monitor Well ID	Tasks in 1/2013 Sampling Event	Casing Size (in)	Top of Casing Elev. (NGVD)	Water Levels Measured In January 2013

in - inches

NGVD - National Geodetic Vertical Datum (1929)

WL - Water Level

GW - Groundwater

NS - Not Sampled

Initial Round of Water Levels¹ - Static WLs collected from 9:15 to 13:45 on 1/22/13

† = MW-6 was sampled on February 20, 2013

Section 6

Water Quality Monitoring Report Certification

FDEP Form 62-701.900(31) completed by CDM Smith is provided in this section.

Florida Department of Environmental Protection

Bob Martinez Center
2600 Blair Stone Road
Tallahassee, Florida 32399-2400

DEP Form #: 62-701.900(31), F.A.C.
Form Title: Water Quality Monitoring Certification
Effective Date: January 6, 2010
Incorporated in Rule 62-701.510(g), F.A.C.

WATER QUALITY MONITORING CERTIFICATION

PART I GENERAL INFORMATION

(1) Facility Name Citrus County Central Class I Landfill

Address P.O. Box 340

City Lecanto Zip 34460-0340 County Citrus

Telephone Number (352) 527-7670

(2) WACS Facility ID SWD/09/39859

(3) DEP Permit Number 21375-018-SO/01

(4) Authorized Representative's Name David R. Rojas, P.G. w/CDM Smith Title Environmental Scientist

Address 1715 N. West Shore Blvd. Suite 875

City Tampa Zip 33607 County Hillsborough

Telephone Number (813) 281-2900

Email address (if available) Rojasdr@cdmssmith.com

CERTIFICATION

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submission of false information including the possibility of fine and imprisonment.

3-27-13

(Date)

(Owner or Authorized Representative's Signature)

PART II QUALITY ASSURANCE REQUIREMENTS

Sampling Organization TestAmerica Laboratories, Inc.

Analytical Lab NELAC / HRS Certification # Tpa - E84282, Tal - E81005, Orlando - E83012, & Savannah GA - E87052

Lab Name TestAmerica Laboratories, Inc.

Address 6712 Benjamin Road, Suite 100, Tampa, FL 33634

Phone Number (813) 885-7427

Email address (if available) www.testamericainc.com

Section 7

Field Sampling Logs

Groundwater sampling logs and equipment calibration logs prepared by TestAmerica Laboratory Inc. are included in this section.

Section 8

Laboratory and Field EDDs and Error Logs (ADaPT Report)

Portable document file (PDF) copies of the laboratory reports are included in a compact disc in this section. The laboratory electronic data deliverable (EDD), the laboratory EDD error log, and the field EDD for use with FDEP's ADaPT software are provided as separate .txt electronic files on the compact disc. Because a leachate effluent sample was collected from the site for laboratory analysis on the same day that MW-6 was sampled and MW-14 was re-sampled, the ADaPT file provided for the samples collected on February 20, 2013 include data from the leachate sample even though the laboratory report and a discussion regarding the results of the leachate sampling are not provided in this report submittal. The laboratory report and a discussion regarding the results of the leachate sampling will be submitted separately.
