RE: **Southeast County Landfill
Laboratory Analytical Results
Initial Assessment Monitoring Plan
Report No. 36 – August 2013**

Dear Mr. Morris:

The Hillsborough County Public Utilities Department (County) is pleased to provide the analytical results from the August 2013 sampling event conducted as part of our continuation of the Initial Assessment Monitoring Plan (IAMP). The IAMP was developed to address the potential impacts to groundwater from the sinkhole on the edge of Phase VI at the Southeast County Landfill (SCLF), which was discovered on December 14, 2010.

As part of the agreement between the County and Florida Department of Environmental Protection Southwest District Office (Department), three (3) upper Floridan/Limestone aquifer monitoring wells, designated as TH-72, TH-76 and TH-77 are sampled on a monthly schedule and three (3) surficial aquifer monitoring wells, designated as TH-73, TH-74, and TH-75 are sampled on a quarterly schedule. Representative samples were collected from each of these six (6) monitoring wells on August 1-2, 2013 and analyzed for total dissolved solids (TDS), chloride, total ammonia, arsenic, iron, sodium, and five (5) field parameters. Each sample collected was analyzed by our contracted laboratory, Test America, Inc. The following paragraphs summarize the parameter specific results pertinent to the evaluation of potential water quality impacts from the sinkhole at the SCLF.

Mr. John Morris, P.G.

October 2, 2013

Page 2

Turbidity

Turbidity values in the surficial aquifer monitoring wells ranged from 1.3 to 10.4 Nephelometric Turbidity Units (NTUs), and 0.2 to 42.9 NTUs in the upper Floridan / Limestone aquifer monitoring wells. Slightly elevated turbidity values continue to be observed in the two newer wells, TH-76 and TH-77. The County believes that the turbidity values at these two locations will continue to decrease over time as they are pumped during the monthly sampling activities.

Conductivity

The conductivity values observed in the surficial aquifer monitoring wells ranged from 356 to 508 micromhos per centimeter (umhos/cm). The conductivity in the upper Floridan/Limestone aquifer monitoring wells ranged from 334 to 1,256 umhos/cm, with the one elevated reading observed in TH-72. Monitoring well TH-72 is located adjacent to the sinkhole and continues to exhibit groundwater impacts from the buried wastes within the sinkhole and the grout materials pumped into the subsurface. The values observed in TH-76 and TH-77 are consistent with the unaffected deep wells across the site.

Total Dissolved Solids (TDS)

TDS was observed in TH-72 above the Secondary Drinking Water Standard (SDWS) of 500 mg/l at a concentration of 800 mg/l. The other two upper Floridan wells both had a TDS value of 230 mg/l. The surficial aquifer wells exhibited TDS values ranging from 170 to 270 mg/l.

Chloride

The chloride value in TH-72 was observed at 290 mg/l, which is above the Primary Dinking Water Standard (PDWS) of 250 mg/l. The remaining monitoring wells exhibited chloride values ranging from 9.2 mg/l to 130 mg/l. It is apparent that the elevated chloride values observed in TH-72 are attributable to waste that entered the sinkhole and/or grouting activities, but these impacts appear to be limited to the area in the immediate vicinity of the sinkhole.

Iron

Total iron concentrations in each of the surficial and upper Floridan aquifer monitoring wells exceeded the SDWS of 0.3 mg/l. The surficial aquifer monitoring wells exhibited values ranging from 7.6 mg/l to 31 mg/l and the upper Floridan/Limestone aquifer monitoring wells exhibited values from 0.72 mg/l to 1.6 mg/l. Results show that the iron observed in TH-72 is lower than the concentrations in TH-76 and TH-77. The elevated iron concentrations observed at specific locations across the site are consistent with background water quality, and are likely naturally occurring and/or the result of past strip mining activities at the site.

Mr. John Morris, P.G.

October 2, 2013

Page 3

Total Ammonia

Surficial aquifer monitoring well TH-74 and upper Floridan well TH-72 exhibited ammonia above the former GCTL of 2.8 mg/l at concentrations of 3.2 mg/l and 6.8 mg/l. The other two upper Floridan wells, TH-76 and TH-77 were observed at 0.26 and 0.36 mg/l, respectively.

Groundwater Elevations and Direction of Flow

The County did not collect groundwater and surface water elevation data from the site during the IAMP sampling event.. The County elected to not collect groundwater elevation data at the sixty-five data points on site as part of the IAMP sampling events in the same month that the semi-annual sampling is conducted in accordance with the Operations Permit No. 35435-014-SO/01 (modified 020-SO/MM). The decision was made to reduce duplication of field assignments during the same month when the sampling event is conducted. Therefore only an upper Floridan aquifer contour diagram is provided in this report. It should be noted that no significant changes to the patterns of flow in the surficial aquifer have been noted over the period of record, and the upper Floridan contour diagram continues to exhibit flow to the northwest.

Conclusions

The water quality observed in the August 2013 IAMP sampling event indicates that the upper Floridan / Limestone well TH-72, which is closest to the sinkhole, continues to exhibit changes in water quality. The impacts observed in TH-72 include elevated conductivity, TDS, chloride, ammonia, iron and sodium. These impacts are not unexpected within the upper Floridan / Limestone aquifer in the immediate vicinity of the sinkhole feature. The two recently installed upper Floridan / Limestone aquifer monitoring wells, TH-76 and TH-77 exhibit good water quality with no evidence of impact from the sinkhole. Conductivity values, TDS, chloride and ammonia are all very low and consistent with the historical data set for the unaffected upper Floridan monitoring wells at the SCLF.

Based on the groundwater elevations in TH-72, TH-76, and TH-77, the direction of flow within the upper Floridan aquifer in the vicinity of the sinkhole again appears to be towards the northwest. The County will continue to evaluate the direction of flow in this area, and if no significant seasonal changes are observed, an additional upper Floridan well may need to be installed in an appropriate down gradient location northwest of the sinkhole.

Recommendations

The County continues to move forward with the optimized IAMP, which includes the monthly sampling of the three upper Floridan / Limestone aquifer monitoring wells, TH-72, TH-76, and TH-77, and the quarterly sampling of the three surficial aquifer monitoring wells, TH-73, TH-74, and TH-75. We will continue to evaluate any water quality changes in both the surficial and upper Floridan wells, and present the findings in the monthly IAMP report.

Mr. John Morris, P.G.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments

No additional comments.

Receipt

The samples were received on 8/1/2013 3:40 PM and 8/2/2013 2:20 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 4.7° C and 5.1° C.

Metals

Method 6010B: The matrix spike (MS) recoveries for batch 140069 was outside control limits. Parent sample was four times greater than spike added. The associated laboratory control sample (LCS) recovery met acceptance criteria.

No other analytical or quality issues were noted.

General Chemistry

Method 300.0: Due to the high concentration of Chloride, the matrix spike (MS) for batch 288422 could not be evaluated for accuracy. The associated laboratory control sample (LCS) met acceptance criteria.

Method 350.1: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 287923 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

No other analytical or quality issues were noted.

Definitions/Glossary

Client: Hillsborough County Public Utilities Dep
Project/Site: SELF-IAMP Monitoring Wells

TestAmerica Job ID: 660-55763-1

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
L	Off-scale high. Actual value is known to be greater than the value given.
U	Indicates that the compound was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.

General Chemistry

Qualifier	Qualifier Description
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
U	Indicates that the compound was analyzed for but not detected.
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
D	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

GROUNDWATER SAMPLING LOG

NOTES: 1. The above do not constitute all of the information required by Chapter 62-160, F.A.C.

2. STABILIZATION CRITERIA FOR RANGE OF VARIATION OF LAST THREE CONSECUTIVE READINGS (SEE FS 2212, SECTION 3)

pH: + 0.2 units. Temperature: + 0.2 °C. Specific Conductance: + 5%. Dissolved Oxygen: all readings < 20% saturation (s).

pH: ± 0.2 units Temperature: $\pm 0.2^\circ\text{C}$ Specific Conductance: $\pm 5\%$ Dissolved Oxygen: all readings $\leq 20\%$ saturation (so optional) Turbidity: all readings $< 20\text{ NTU}$; optionally $\pm 5\text{ NTU}$ or $\pm 10\%$ (whichever is greater)

optionally, ± 0.2 mg/L or $\pm 10\%$ (whichever is greater) **Turbidity:** all readings ≤ 20 NTU; optionally ± 5 NTU or $\pm 10\%$ (whichever is greater)

Revision Date: February 12, 2018

List Number: 1

Creator: McNulty, Carol

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
