RE: Citrus County Landfill, Ground-water Monitoring Report,
Permit No. MP09-112294

Dear Mr. Morgan:

Please find enclosed three copies of our data report of water quality sampling and analysis of ground-water from monitor wells at the Citrus County Landfill. This report includes field and laboratory data for the fourth quarter sampling event of 1987.

Please review the report at your convenience and do not hesitate to contact us if you have any questions or comments.

Sincerely,

LAW ENVIRONMENTAL, INC.

Citrus County

CITRUS COUNTY CENTRAL LANDFILL
WATER QUALITY SAMPLING DATA REPORT

INTRODUCTION

On December 17, 1986, Law Environmental, Inc., (formerly Seaburn and Robertson) was authorized by Citrus County to continue to sample, analyze and report groundwater quality at all monitor wells at the Citrus County Central Landfill (see Figure 1) on a quarterly basis for one year. This quarterly program is in compliance with Specific Conditions 5 and 6 of the Florida Department of Environmental Regulation (FDER) Permit Number MP09-112294. These Specific Conditions state that the permittee shall sample all ground-water monitoring wells annually for the Primary and Secondary Drinking Water Parameters included in Chapters 17-22, F.A.C. and sample quarterly for all Secondary Drinking Water Parameters with the addition of Nitrate, Sodium, Turbidity, Total Organic Carbon, Total Coliform, Temperature, Water Level (NGVD), Total Kjeldahl Nitrogen and Specific Conductance. Because of the continued detection of vinyl chloride in monitor well A (MW-A), the FDER requested that the sample analysis for all monitor wells include the volatile organic compounds in addition to the required parameters listed in the permit.

Field Methods

Law Environmental, Inc., collected ground-water samples from four wells (see Figure 2) located at the county landfill near Lecanto on October 18, 1987. Additional samples for volatile organic analysis were collected from monitor wells B, C, and D on November 5, 1987. Prior to collection of water samples, ground-water levels were measured by the wetted steel tape method. The volume of water in the well casing was then calculated. Each well was pumped to remove stagnant water in the casing. Volumes equal to approximately 4.7 to 5.4 casings were removed with permanently installed submersible pumps. The submersible pumps at Wells A, B and C were powered by a Honda 3000 portable generator. The pump at Well D is wired to electrical power lines. Samples at Wells A, B and C were collected at the discharge valves located on top of the wells (see Figure 3). Samples at Well D were collected at a discharge valve on the outside of the well pumphouse. Field pH, temperature and specific conductance were measured in the sample retained for analysis. Table 1 lists results of the field measurements. Appropriate preservatives were placed in sampling bottles prior to sampling by the laboratory as part of sample kit preparation, and all samples were chilled during transportation to the

(1) Evacuated with permanent submersible pump.

laboratory. All samples were delivered to the water quality laboratory the day after the samples were collected, except for samples collected for total coliform which were delivered to a local laboratory the same day they were collected.

Water Quality

Results of the chemical analysis of the ground-water by Orlando Laboratories, Inc., were received on December 17, 1987. Appendix A lists the results of analyses on the four samples for the list of parameters designated by the FDER in Permit Number MPC9-112294 for quarterly monitoring, plus the volatile organic compounds included in Chapters 17-22 of the Florida Administrative Code. Laboratory quality assurance data is also presented. Appendix B is a transcription of the data onto the FDER report forms.

Field and laboratory measurements of pH indicated that monitor well B, the upgradient well which is completed in a sand unit, had a lower than acceptable (acid) pH. The reported value for corrosivity was -3.6 Langlier units, indicating that the sample is corrosive with respect to calcium carbonate.

Samples from monitor wells A, C, and D, the downgradient wells are completed in limestone units and were found to have positive Langlier values indicating that the samples are scale forming. Manganese exceeded the FDER standard in samples from wells A, C, and D.

The standard for vinyl chloride was exceeded at Monitor Well A. This was the fourth time that the FDER standard for vinyl chloride has been exceeded at the Citrus County Landfill's monitor well A.

APPENDIX A

Well Name _____

Classification of Groundwater G-2, Floridan

Well Developed* Prior to
 Sample Collection (Yes/No) yes

Ground Water Elevation
 (above MSL) 5.92

STORET Code	Parameter Monitored	Sampling Method	Analysis Method	Analysis Result	Units	Sample Filtered/Unfiltered	Preser-vatives Added
00942	Chloride	Grab	S.M. 407.A	4.2	mg/l	Unfiltered	None
00081	Color	Grab	S.M. 204.A	<5.0	PCU	Unfiltered	None
01042	Copper	Grab	EPA 220.1	<0.01	mg/l	Unfiltered	None
---	Corrosivity	Grab	Calculation	0.4	Units	Unfiltered	None
38260	MBAS	Grab	EPA 425.1	<0.1	mg/l	Unfiltered	None
01045	Iron	Grab	EPA 200.7	<0.100	mg/l	Unfiltered	None
01055	Manganese	Grab	EPA 243.1	0.269	mg/l	Unfiltered	None
00945	Sulfate	Grab	EPA 375.4	<1.0	mg/l	Unfiltered	None
00530	TDS	Grab	EPA 160.2	255.0	mg/l	Unfiltered	None
01092	Zinc	Grab	EPA 289.1	<0.05	mg/l	Unfiltered	None
00403	pH (Lab)	Grab	EPA 150.1	7.5	pH Unit	Unfiltered	None
00085	Odor	Grab	EPA 140.1	1.0	TON	Unfiltered	None
00630	Nitrate-N	Grab	EPA 353.2	<0.03	mg/l	Unfiltered	H ₂ SO ₄
00625	TKN	Grab	EPA 351.2	0.75	mg/l	Unfiltered	None
00095	Spec. Cond.	Grab	EPA 120.1	330.0	umhos/cm	Unfiltered	None
00929	Sodium	Grab	S.M. 325.B	3.6	mg/l	Unfiltered	HNO ₃
00680	TOC	Grab	EPA 415.1	17.3	mg/l	Unfiltered	H ₂ SO ₄
00076	Turbidity	Grab	EPA 180.1	0.5	NTU	Unfiltered	None
31502	T. Coliform	Grab	S.M. 909.A	<3.0	MPN/100c	Unfiltered	None

*Well development is the process of pumping the well prior to sampling in order to obtain representative ground water sample.

DE. ora 17-1.216(2)
 Effective January 1, 1983

*All samples cooled to 4°C.
