**Re: Manatee County Lena Road Landfill
Facility Identification Number 0810055-003AV
Semi-Annual Report – January to June 2004**

Dear Mr. Cox:

Attached is the semi-annual report for the Lena Road Landfill in accordance with the reporting requirements of 40 CFR 60.757(f) and 40 CFR 63.1980. This report covers the period from January through June 2004.

If you should have any questions concerning this report, please contact me in our Orlando office at 407/647-7275, Ext. 4153 or Chris Gaw at Ext. 4370.

Sincerely,

Joe Miller, P.E.
Senior Project Manager

Lena Road Landfill Semi-Annual Report

Facility ID: 0810055-003AV

January to June 2004

Prepared for

**Manatee County
3333 Lena Road
Bradenton, Florida 34211**

Prepared by

**482 S. Keller Road
Orlando, Florida 32810**

120498.91 9100

This semi-annual report is submitted in compliance with the reporting requirements of 40 CFR 60.757(f) and 40 CFR 63.1980. This report covers the reporting period from January through June 2004.

7.1	Added Wells / Collection System Expansions	7-1

Appendix

- A Monthly Gas Extraction Well Monitoring Results
- B Monthly Flare Outage Summary Sheets

1.0 General Description

1.1 Site Description

The Lena Road Landfill is located at 3333 Lena Road, Bradenton, Florida 34211. Figure 1 illustrates general location of the Lena Road Landfill.

1.2 Facility Description

The Lena Road Landfill operations involve three stages. Stage I is a closed section of the landfill that is no longer accepting waste and is comprised of about 132-acres of the site. Stage II is the 118-acre landfill expansion area north of the existing operating landfill. No refuse is located within the Stage II area. Stage III is a 66-acre area west of the Stage I area and is currently the active operating area for the landfill. The Stage III area contains refuse from an inactive landfill located within the Stage III area.

1.3 Landfill Gas Collection System

The Lena Road Landfill has an active landfill gas collection system around the Stage I portion of the landfill. The major components of the system include a candle flare, blower, and force-main collection system. There are 74 vertical and horizontal gas extraction wells and approximately 14 other sampling points within the collection system.

A vacuum exerted on the system by the blower, pulls gas into the wells and then into the force-main collection system surrounding Stage I portion of the landfill. A knockout tank is used to separate moisture and particulates from the landfill gas stream. After passing through the knockout tank, the gas is subject to controlled combustion at the LFG&E Triton CF-3000 candle flare.

1.4 Landfill Gas Sampling Equipment

Landfill gas composition and pressures were monitored with a GEM 2000 portable gas analyzer designed by CES LandTec. The GEM 2000 samples and analyzes the gas stream for methane, carbon dioxide, and oxygen content of the landfill gas. The unit also records static and dynamic pressures, when the unit is hooked up to the wellhead correctly and the transducers have been zeroed. Readings are displayed and can be stored in the instrument and downloaded to a personal computer for the purpose of reporting, analyzing, and archiving data.

2.0 Exceedance of Applicable Parameters

This section will address the value and length of time for exceedance of the applicable monitored parameters as specified under subsection 60.756(a-d).

2.1 Gas Extraction Well Pressure (40 CFR 60.756 (a)(1))

Well pressures at the gas extraction wells were monitored on a monthly basis. Valve adjustments were made for wells with a positive static pressure. In accordance with 40 CFR 60.753(g), if corrective actions are initiated within five days, the monitored exceedance is not a violation of the operating standard. The gas extraction well pressure monthly monitoring results for the reporting period are contained in Appendix A.

2.2 Landfill Gas Composition (40 CFR 60.756 (a)(2))

Gas extraction wells were analyzed on a monthly basis for oxygen content. Valve adjustments for affected wells were made for wells with an oxygen content greater than 5%. In accordance with 40 CFR 60.753(g), if corrective actions are initiated within five days the monitored exceedance is not a violation of the operating standard. The gas extraction well monthly monitoring results for the reporting period are contained in Appendix A.

3.0 Control Device: Gas Stream Diversions

There were no diversions of the landfill gas from the control device during the reporting period.

4.0 Control Device: Periods of non-Operation

Flare outages for time periods exceeding 1-hour were tallied for each day (from midnight to 11:59 p.m.) of the month. As such, a flare outage that continued past midnight into the next day was counted as a separate flare outage time period.

There were 45 periods of time exceeding a 1-hour duration during which the control device was not operational. The number of periods exceeding 1-hour in duration are listed, by month, below for the reporting period.

- January 0
- February 3
- March 6
- April 8
- May 7
- June 21

The occurrence and duration of flare outages are summarized in monthly tables in Appendix B.

5.0 Collection System: Periods of non-Operation

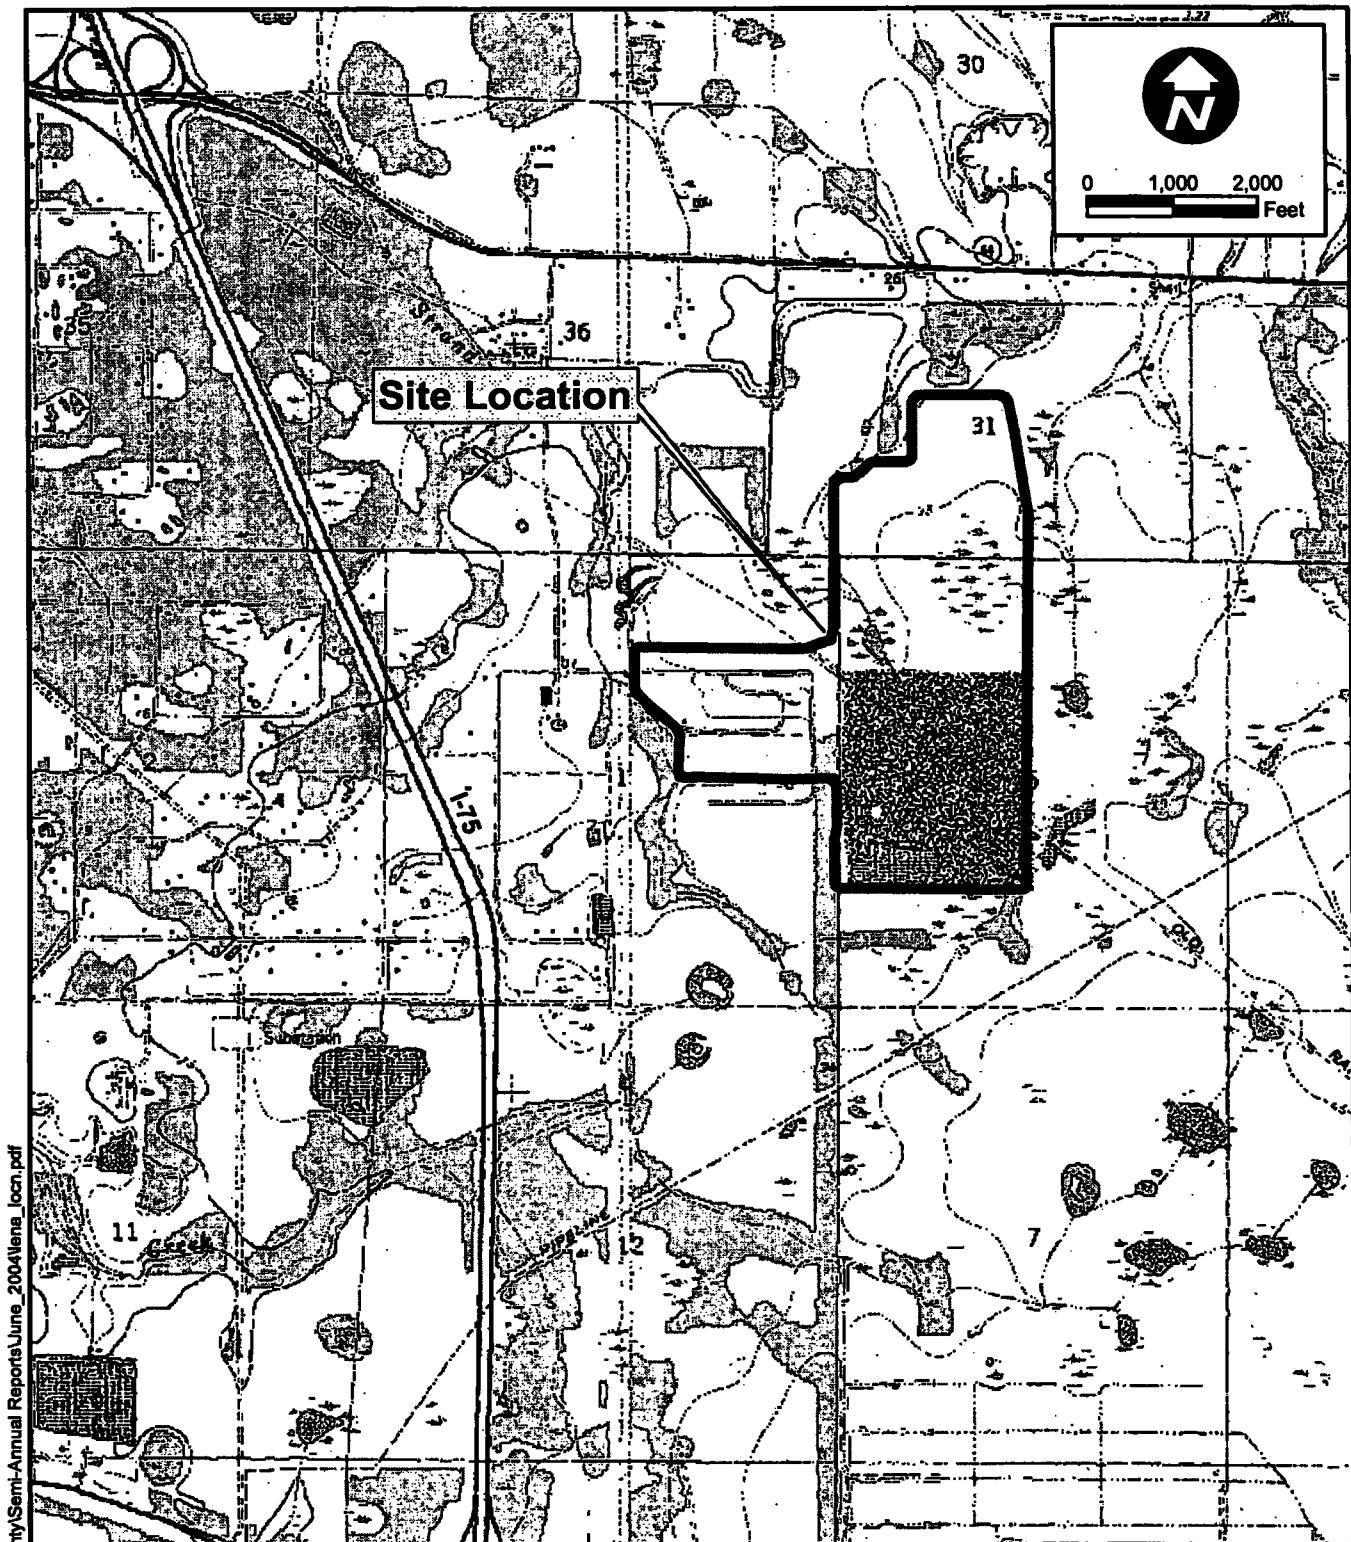

There were no periods of time exceeding five (5) days during which the collection system was not operational.

6.0 Surface Emission Monitoring Exceedance

A gas reading in excess of 500 parts per million was encountered in a wet area east of gas extraction well No. 41 during the quarterly surface emission monitoring event on June 28, 2004. There was no exceedance during the previous quarterly sampling event in March 2004. The location was rechecked for methane on July 7, 2004 and the results were less than 500 parts per million.

7.0 Added Wells / Collection System Expansions

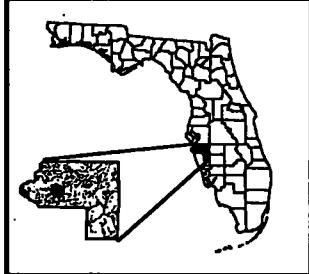

There were no gas extraction wells added to the gas collection system. The collection system force-main system was not expanded during the reporting period.
