**SECTION 12.0 - WTE FACILITIES****Requirements:**

The requirements listed in this section provide an opportunity for the Department's inspector to indicate the conditions found at the time of the inspection. A "Not Ok" response to a requirement indicates either a potential violation of the corresponding rule or an area of concern that requires more attention. Both potential violations and areas of concern are discussed further at the end of this inspection report.

**COMMENTS:**

07/09/2014

During the inspection, the Waste-to-Energy Plant, Class I Landfill (SW-1, SW-2, A-1, A-2, A-3 and A-4), Class III Landfill, Waste Tire Processing Facility, Source Separated Organics Processing Facility (SOPF), Household Hazardous Waste Collection Center, Citizen Drop-off Facility, and Leachate Storage Tank/Loading Area were observed during this inspection.

Item 1.6 - GW results not reviewed as part of this inspection

Item 2.6 - HHW Bulb Management. Ref to 12/13/13 inspection report transmitted w/this report.

Item 2.28 - During the inspection, Department staff observed that the perimeter berm of SW-2 had blown-out in at least one area. Documentation that the berm was restored was received May 9, 2014. No additional information is necessary.

Item 12.1 - During the inspection, Department staff observed recently installed cuts in the

containment curbing, coupled with absorbent socks, at the entrance and exit of the ash building. The facilities response following the inspection indicated these "cuts in the curbing were made to reduce sheetflow of non-contact stormwater into the Ash Storage Building, thus preventing the generation (and subsequent management of) leachate. The original drainage of the area did not provide for curbing in this area. Providing the cuts in the curbing restored the site drainage to its original design as outlined in the Power Plant Siting Conditions of Certification and minimizes leachate generation."

Information regarding the original site drainage design in this area could not be located in the Department's file. However, it is the Department's understanding that the containment curbing and associated sump, was intended to prevent discharge of contact water to the adjacent stormwater swale since spillage of ash in this area has been noted. The Department expects that any contact water generated in this area will be managed within the wastewater/leachate management system in the future, and mixing of stormwater with leachate will be prevented. In the event any non-stormwater discharge is observed by the Department from these cuts, sampling of surface water and/or soils may be required.
