COMMENTS:

08/08/2014

A compliance evaluation inspection was conducted at the facility on August 8, 2014. The facility operates under Permit No. 0245850-002-WT/05 and Alternate Procedure (Case SWAP-04-02) as stated in Specific Condition No. 10 listed in the permit. The permit was issued on October 31, 2012 and expires on October 31, 2017. The primary operation of the facility is retreading and repairing off road tires.

The Florida Tire Terminal Emergency Preparedness Manual and Safety Manual; and the fire

Inspection Date: 08/08/2014

inspections reports for 2013 were reviewed during the inspection.

In accordance with the Approval of Alternative Procedures, waste tires are stored within the acceptable storage arrangement of on-floor, on-side up to 12 feet high and on-floor, on tread up to five feet high; 25 feet is maintained around the building perimeter; and fire surveys are conducted semi-annually at the facility (see attachment).

The facility has five vehicles registered to transport waste tires. The facility does not perform any repairs to the fleet vehicles or forklifts. Fleet vehicles are taken to a professional mechanic for maintenance and repairs. Forklifts are serviced and repaired by Bobcat.

Fire extinguishers are located throughout the buildings. The fire extinguishers are inspected quarterly by Florida Tire Terminal personnel and biannually by Midstate to ensure that they are working properly. The facility has an internal intercom system.

Repaired and regrooved tires are stacked inside the Finish Product Room. The stacks have more than 18 inches of space between them and the ceiling. Signs are posted in the building indicating that "ALL TIRES SHOULD BE 18 INCHES FROM CEILING."

Waste tires are stored inside a semi-truck trailer. Liberty Tires removes the waste tires. Junk tire tubes are recycled. Scrap tire tubes are removed by Liberty Tires.

Aquabac 200 G Mosquito Biolarvicide Granule is placed inside the tires to control mosquito larvae.

Spent lead tire weights were observed at the facility. The facility was advised that spent lead tire weights may be considered hazardous waste if not recycled. It is recommended that the facility store the spent lead tire weights in a closed and labeled container. The facility should maintain receipts for the disposal of the lead tire weights on site for a minimum of three years.

The facility was determined to be in compliance at the time of the inspection.
