Dear Mr. Morris:

The Hillsborough County Public Utilities Department (County) is pleased to provide the analytical results from the September 2014 sampling event conducted as part of the continuation of the Initial Assessment Monitoring Plan (IAMP). The IAMP was developed to address the potential impacts to groundwater from the sinkhole on the edge of Phase VI at the Southeast County Landfill (SCLF), which was discovered on December 14, 2010.

As part of the agreement between the County and Florida Department of Environmental Protection (Department) Southwest District Office, four (4) upper Floridan/Limestone aquifer monitoring wells, designated as TH-72, TH-76, TH-77, and TH-78 are sampled on a monthly schedule. Representative samples were collected from each of these four (4) monitoring wells on September 5, 2014 and analyzed for total dissolved solids (TDS), chloride, total ammonia, arsenic, iron, sodium, and five (5) field parameters. Each sample collected was analyzed by our contracted laboratory, Test America, Inc. The following paragraphs summarize the parameter specific results pertinent to the evaluation of potential water quality impacts from the sinkhole at the SCLF.

**pH**

pH was observed at 8.18 pH units in new upper Floridan aquifer (UFA) monitoring well, TH-78. The elevated pH values observed in this well do not appear to be representative of the unaffected UFA. Based on the pH values decreasing since installation, the County believes the elevated values observed are likely attributable to the grout materials utilized during construction of this monitoring well. The pH values in down gradient monitoring wells TH-72, TH-76, and TH-77 were recorded at 6.74, 7.28, and 7.31 pH units.

**Turbidity**

Turbidity values in the upper Floridan / Limestone aquifer monitoring wells TH-72, TH-76, TH-77, and TH-78 were recorded at 1.96, 19, 1.02, and 3.86 NTUs, respectively.

**Conductivity**

The conductivity values observed in monitoring wells TH-72, TH-76, TH-77, and TH-78 were 3,156, 596, 578, and 680 micromhos per centimeter (umhos/cm), respectively. Monitoring well TH-72 is the closest location to the sinkhole, and continues to exhibit water quality impacts. The elevated conductivity observed is likely attributable to the waste in the deep areas of the sinkhole and the subsurface grouting processes conducted as part of the sinkhole stabilization and remediation. Conductivity values in down gradient monitoring wells TH-76, TH-77, and TH-78 are relatively low and appear to be consistent with the unaffected deep wells across the site.

**Total Dissolved Solids (TDS)**

The TDS in monitoring well TH-72 was observed at 1,400 mg/l, which continues to be above the SDWS of 500 mg/l. The remaining three (3) down gradient UFA monitoring wells, TH-76, TH-77, and TH-78 exhibited TDS values of 240, 210, and 270 mg/l, respectively, which is consistent with the water quality of the unaffected deep wells across the site.

**Chloride**

Chloride was observed at 510 mg/l in monitoring well TH-72, which is above the SDWS of 250 mg/l. The elevated chloride value observed is likely attributable to waste in the sinkhole and the grout materials injected into the subsurface as part of the sinkhole stabilization and remediation. Chloride values in the down gradient UFA monitoring wells TH-76, TH-77, and TH-78 were observed at 12, 9.8, and 36 mg/l, which is consistent with the unaffected deep wells across the site. The value of 36 mg/l observed in TH-78 is also thought to potentially be attributable to the grout materials used to seal the casing in the new well.

**Iron**

Total iron concentrations in two (2) of the four (4) upper Floridan/Limestone aquifer monitoring wells were observed above the SDWS of 0.3 mg/l. Monitoring wells TH-72 and TH-76 exhibited iron at 0.65 and 0.61 mg/l, respectively. Monitor wells TH-77 and TH-78 exhibited iron below the SDWS at 0.15i and 0.27 mg/l. The iron concentrations observed have been consistent, and the iron appears to be naturally occurring in some areas of the limestone formation, or may be the result of impacts from the strip mining activities conducted in area prior to the landfill operations.

### **Sodium**

Sodium was observed at a concentration of 210 mg/l in monitoring well TH-72, which is above the PDWS of 160 mg/l. The elevated sodium value is likely attributable to the waste in the sinkhole and/or the grouting materials, as previously discussed. Sodium values in down gradient monitoring wells TH-76, TH-77, and TH-78 were observed at 20, 17, and 35 mg/l, which is consistent with the unaffected deep wells across the site.

### **Groundwater Elevations and Direction of Flow**

On September 2, 2014, the County collected groundwater and surface water elevation data at eleven (11) locations along the western portion of Phases 1-6 at the landfill site, including seven (7) surficial aquifer wells and four (4) upper Floridan (limestone) aquifer wells. No significant changes to the patterns of flow in the surficial aquifer were noted in the data set, and the flow diagram provided is consistent with the observations over the extensive period of record. The elevations observed within the wells closest to the sinkhole indicate that flow patterns continue to be affected in that area, which has not been unexpected. However, the overall direction of flow within the surficial aquifer remains toward the west/northwest.

A contour diagram of the upper Floridan / Limestone aquifer has been prepared for the west side of the landfill and the general area around the sinkhole, and it is included with this submittal. This diagram was generated manually in AutoCad™ utilizing the four data points closest to the sinkhole. During this sampling event, the changes in elevations between TH-72 and TH-76 is - 0.05 ft., and TH-72 and TH-77 is + 0.15 ft. Elevation of newly installed monitor well TH-78 indicated an elevation of approximately 5 feet higher than those elevations recorded at TH-72, TH-76, and TH-77. This anomaly in the groundwater elevation indicates that TH-78 may be influenced by the surface water body in this area, or some other geologic formation anomaly may be creating this potentiometric high. However, even though the elevation at TH-78 indicates that the well can be down gradient of the sinkhole area, the County believes that the well provides a valuable data point, and will continue to evaluate the water quality and elevations at this site. For this report, the elevation data was not used to prepare the UFA contour diagram.

### **Conclusions**

The water quality observed in the September 2014 IAMP sampling event indicates that the monitoring well TH-72, which is closest to the sinkhole, continues to exhibit impacts to water quality in the upper Floridan / Limestone aquifer. The impacts observed include elevated conductivity, TDS, chloride, iron and sodium. The values have remained relatively stable, and do not appear to be migrating to the down gradient wells installed to evaluate this possibility. These impacts were not unexpected in the immediate vicinity of the sinkhole, and TH-72 is less than fifty feet away from the former surface expression, and likely even closer to the subsurface karst feature where waste and grout materials are likely present. Down gradient monitoring wells, TH-76 and TH-77, and TH-78 exhibit good water quality with no evidence of impact from the sinkhole. Conductivity values, pH, TDS, sodium and chloride are all very low and consistent with the historical data sets for the unaffected upper Floridan aquifer groundwater monitoring wells at the SCLF.

Mr. John Morris, P.G.  
October 28, 2014  
Page 4

### Recommendations

The County continues to move forward with implementation of the IAMP, which includes the monthly sampling of the four upper Floridan / Limestone aquifer groundwater monitoring wells, TH-72, TH-76, TH-77, and TH-78, and quarterly sampling of the three surficial aquifer wells, TH-73, TH-74, and TH-75. The County will continue to evaluate any water quality changes in both the surficial and upper Floridan aquifer wells, and present the findings in the monthly IAMP reports. Monthly sampling shall continue for the short term.

However, it should be noted the IAMP has been conducted for over three and half years, and the consistency of the data set supports closure of this monitoring plan. A select group of the IAMP wells, designed to provide long term protectiveness, should be included in the semi-annual sampling required by the Landfill Operations Permit No. 35435-022-SO/01. It is anticipated that an application for modification of that permit will include this proposed approach. If you have any specific concerns with this concept, please provide your feedback as soon as possible, so we can incorporate any suggestions into our strategy moving forward.

Enclosed for your review please find a site location map depicting the location of the monitoring wells sampled, the water quality data summary table for this sampling event, a groundwater elevation data table, groundwater contour and flow diagrams for the surficial and upper Floridan / Limestone aquifers, the historical data summary tables for the wells sampled this month, and the complete analytical data report from our contracted laboratory, Test America, Inc. Should you have any questions or require any additional information please feel free to call me at (813) 663-3221.

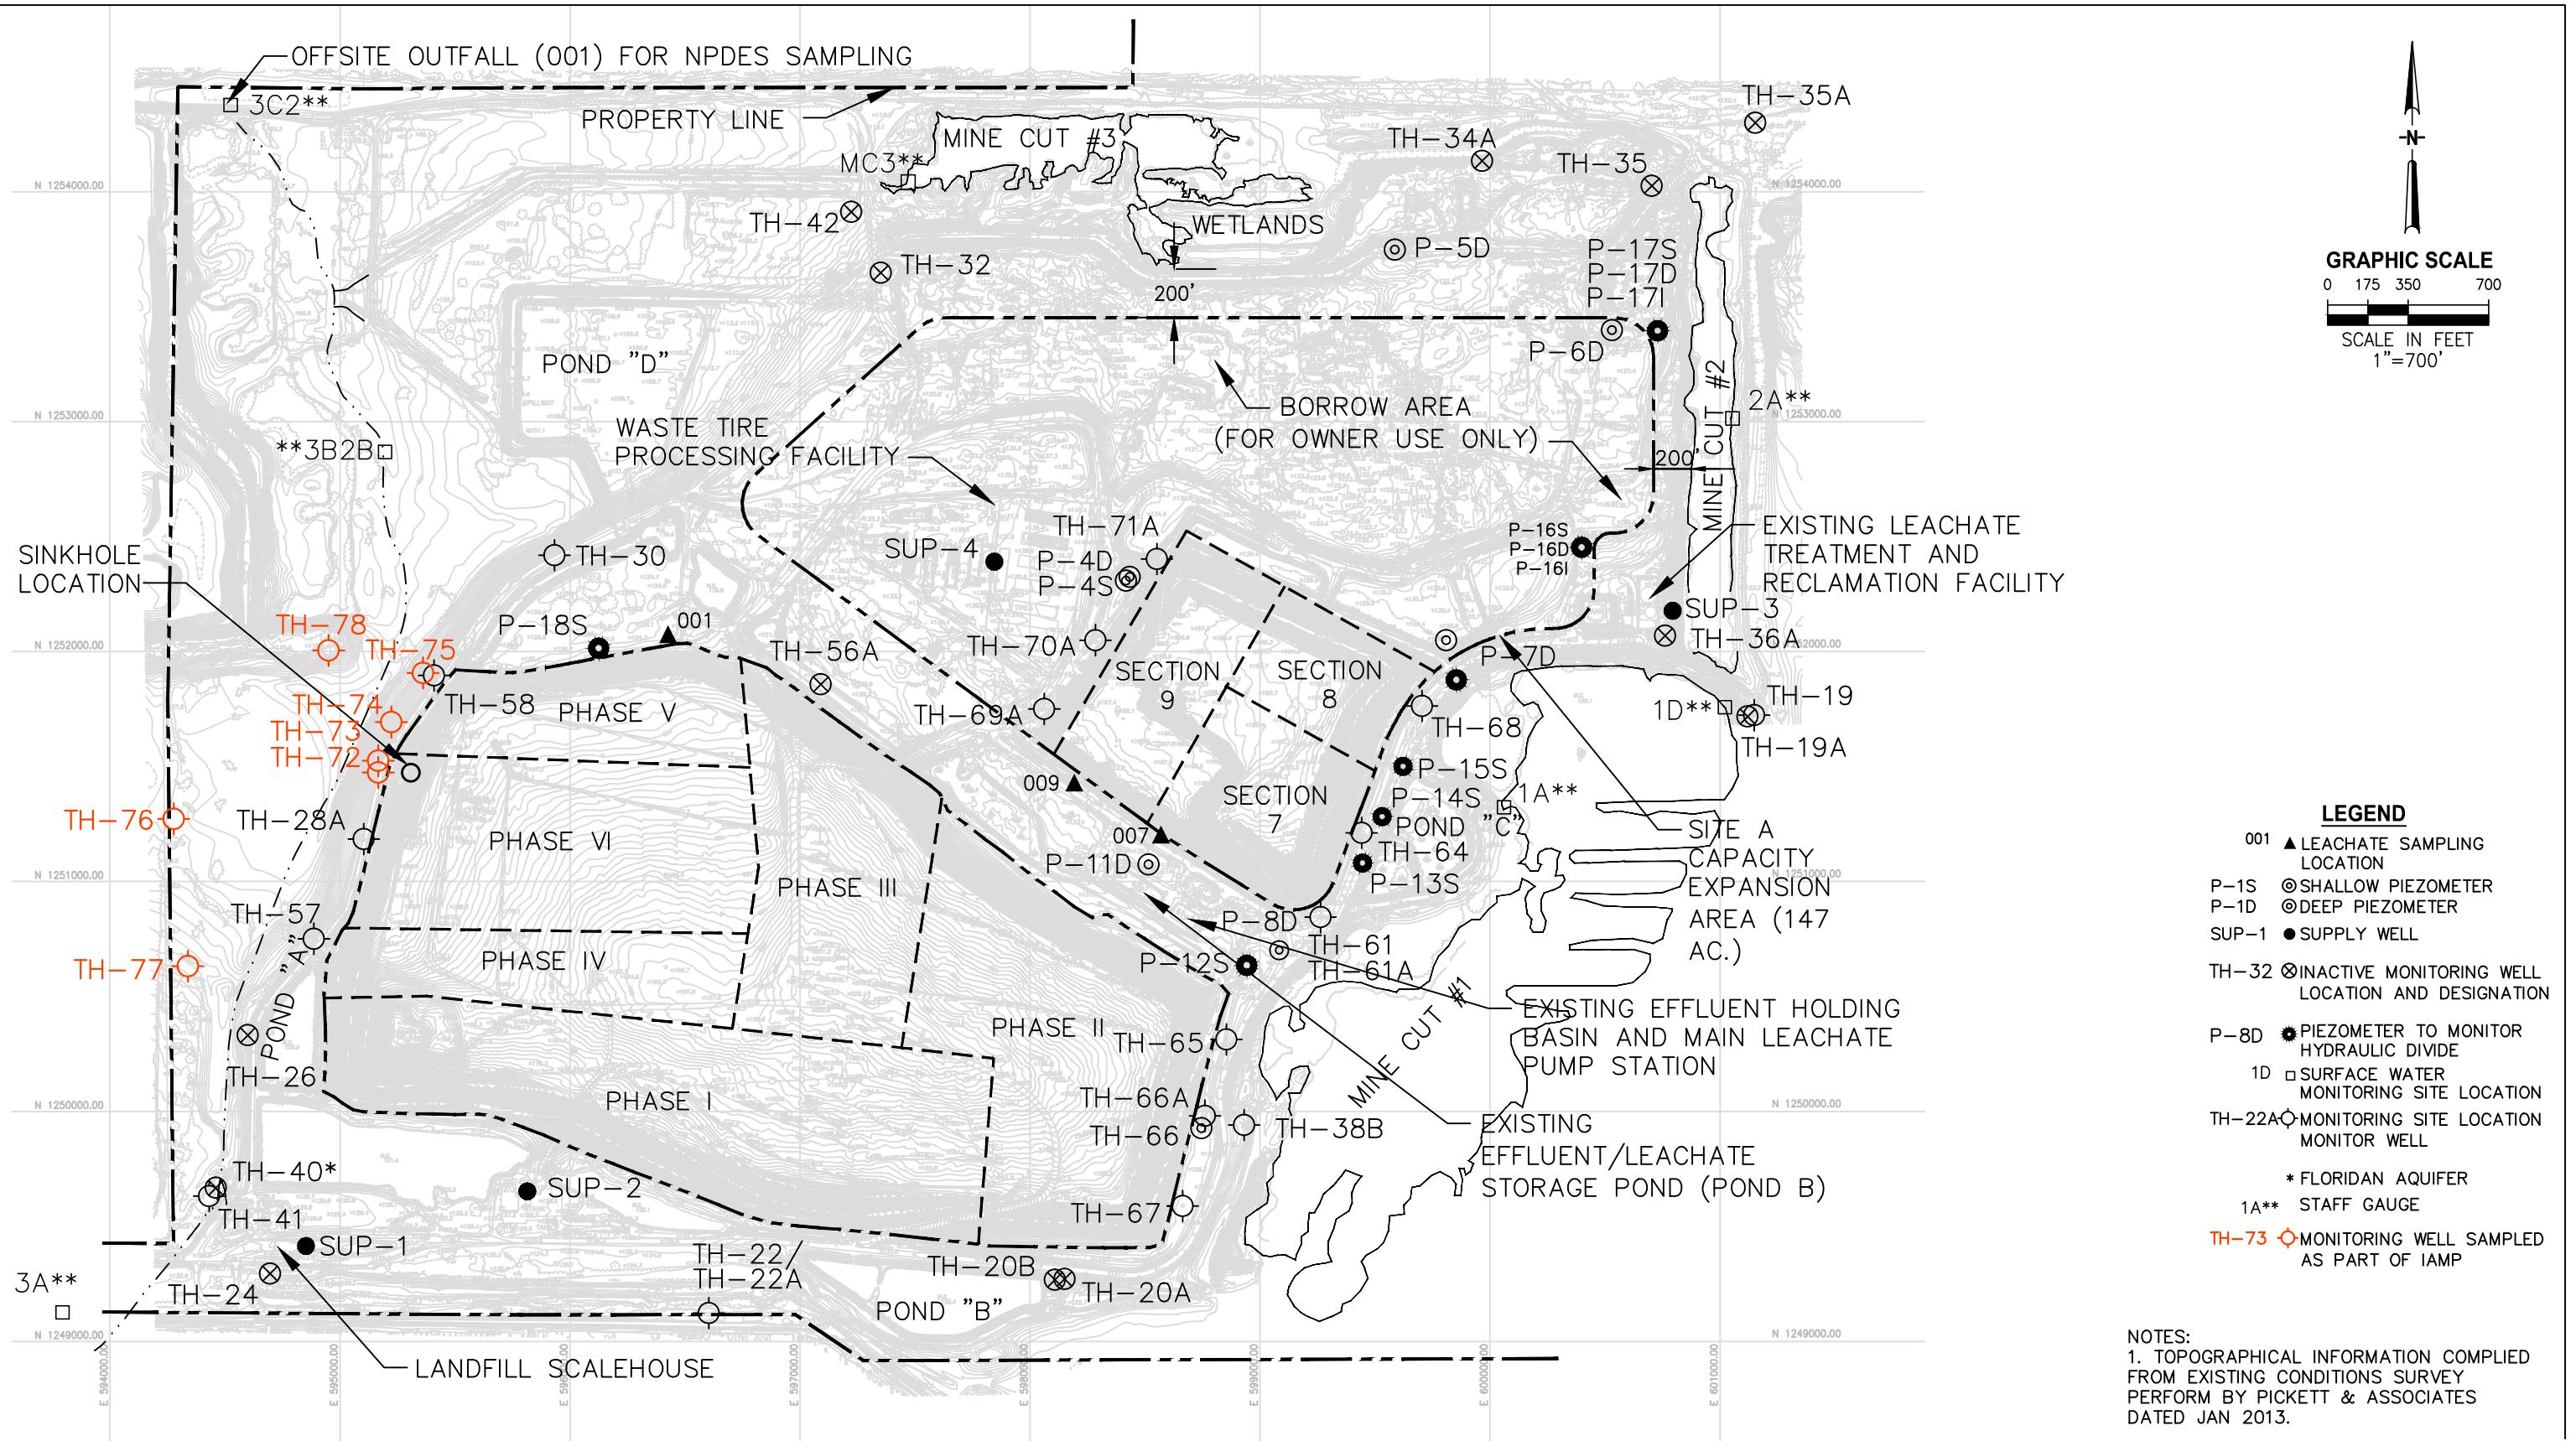

Respectfully submitted,

*David S. Adams* 10/28/2014

New survey data beginning with 10/4/2012.

i = reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

ND = No Data - water levels collected during quarterly ADR.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

## Case Narrative

Client: Hillsborough Co Public Utilities Dept  
Project/Site: SELF IAMP

TestAmerica Job ID: 660-62676-1

**Job ID: 660-62676-1**

**Laboratory: TestAmerica Tampa**

### Narrative

**Job Narrative  
660-62676-1**

### Comments

No additional comments.

### Receipt

The samples were received on 9/5/2014 3:30 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.6° C.

### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### General Chemistry

Method 350.1: The positive result for ammonia in the Blank Field was confirmed..

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## Definitions/Glossary

Client: Hillsborough Co Public Utilities Dept  
Project/Site: SELF IAMP

TestAmerica Job ID: 660-62676-1

### Qualifiers

#### HPLC/IC

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

#### Metals

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

#### General Chemistry

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

### Glossary

**Abbreviation** These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

## Login Sample Receipt Checklist

Client: Hillsborough Co Public Utilities Dept

Job Number: 660-62676-1

**Login Number: 62676**

**List Source: TestAmerica Tampa**

**List Number: 1**

**Creator: Conner, Keaton**

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
