Subject: Central County Solid Waste Disposal Complex, Permit No. SC58-214931
Surface Water Semi-Annual Sampling 1996

Dear Ms. Amram:

In accordance with Specific Condition No. 27 of our Central County Landfill construction permit, we are submitting copies of the following documents for your review: 1) Ground Water Monitoring Report, DEP Form 62-522.900(2); 2) sampling reports with chain-of-custody records; 3) field sampling data sheets; and 4) laboratory results with quality control data from Sarasota County Natural Resources, Environmental Quality Laboratory, Inc. Also enclosed are surface water elevations which are measured quarterly.

If you have questions on any of the above, please do not hesitate to call.

Sincerely,

Timothy A. Lawrence, P.E.
Solid Waste Operations Manager

Attached are the results from 8 sample(s) collected by you and sent to the Environmental Quality Laboratory for analysis. The EQ Lab identification number is 96/1399/17067; please refer to this number when requesting information regarding these data. Also, this letter should be attached to any data submitted by you to regulatory agencies.

The Laboratory has an approved FDER Comprehensive Quality Assurance Plan (#870264G) which specifies the procedures used in the analyses of the above referenced samples. In addition, the Laboratory is certified by DHRS for the analysis of environmental and drinking water samples (#E85086 & 85116) respectively. These certification numbers should be referenced when attesting to regulatory agencies regarding the protocols of the analytical procedures used.

The Environmental Quality Laboratory is pleased to have served you and hopes to meet any future laboratory needs you may have.

Sincerely,

Ralph T. Montgomery, Ph.D

ENVIRONMENTAL QUALITY LABORATORY, INC.
DATA QUALIFIER CODES

SYMBOL	MEANING

A Value reported is the mean (average) of two or more determinations. This code shall be used if the results of two or more discrete and separate samples are averaged. These samples shall have been processed and analyzed (e.g. laboratory replicate samples, field duplicates, etc.) independently. Do not use this code if the data are the result of replicate analysis on the same sample aliquot, extract or digestate. Under most conditions, replicate values shall be reported as individual analyses.

B Results based upon colony counts outside the acceptable range. This code applies to microbiological tests and specifically to membrane filter colony counts. The code is to be used if the colony count is generated from a plate in which the total number of coliform colonies exceeds the method indicated ideal ranges which are:

Total Coliforms: 20-80 colonies
Fecal Coliforms: 20-60 colonies

F When reporting species: F indicates the female sex

H Value based on field kit determination; results may not be accurate. This code shall be used if a field screening test (i.e. field gas chromatograph data, immunoassay, vendor-supplied field kit, etc.) was used to generate the value and the field kit or method has not been recognized by the Department as equivalent to laboratory methods.

J Estimated value; value not accurate. This code shall be used in the following instances:

1. surrogate recovery limits have been exceeded;
2. no known quality control criteria exists for the component;
3. the reported value failed to meet the established quality control criteria for either precision or accuracy;
4. the sample matrix interfered with the ability to make any accurate determination; or
5. if the data is questionable because of improper laboratory or field protocols (e.g. composite sample was collected instead of a grab sample).

Note a "J" value shall be accompanied by justification for its use.
A "J" value shall not be used if another code applies (e.g., K, L, M, T, V, Y, I)

K Off-scale low. Actual value is known to be less that the value given. This code shall be used if:

1. The value is less than the lowest calibration standard and the calibration curve is known to be non-linear; or
2. The value is known to be less than the reported value based on sample size, dilution or some other variable.

This code shall not be used to report values that are less than the laboratory practical quantitation limit or laboratory method detection limit.

L Off-scale high. Actual value is known to be greater than value given. To be used when the concentration of the analyte is above the acceptable level for quantitation (exceeds the linear range or highest calibration standard) and the calibration curve is known to exhibit a negative deflection.

M When reporting chemical analyses: presence of material is verified but not quantified; the actual value is less than the value given. The reported value shall be the laboratory practical quantitation limit. This code shall be used if the level is too low to permit accurate quantification, but the estimated concentration is greater than the method detection limit. If the value is less than the method detection limit use "T" below.
When reporting Oxygen Reduction Potential or Temperature: indicates a negative value
When reporting Species: indicates male sex.

N Presumptive evidence of presence of material. This qualifier shall be used if:

1. the component has been tentatively identified based on mass spectral library search;
2. there is an indication that the analyte is present, but quality control requirements for confirmation were not met (i.e. presence of analyte was not confirmed by alternate procedures).

O Sampled, but analysis lost or not performed. Note: if reporting data to the U.S. Environmental Protection Agency Water Quality Storage and Retrieval (STORET) data base, a numerical value must be entered. Such values are not meaningful and shall not be used.

Q Sample held beyond the accepted holding time. This code shall be used if the value is derived from a sample that was prepared or analyzed after the approved holding time restrictions for sample preparation or analysis.

T Value reported is less that the laboratory method detection limit. The value is reported for informational purposes, only and shall not be used in statistical analysis.

U Indicates that the compound was analyzed for but not detected. This shall be used to indicate that the specified component was not detected. The value associated with the qualifier shall be the laboratory method detection limit. Unless requested by the client, less than the method detection limit values shall not be reported (see "T" above).

V Indicates that analyte was detected in both the sample and the associated method blank. Note: the value in the blank shall not be subtracted from associated samples.

Y The laboratory analysis was from an unpreserved or improperly preserved sample. The data may not be accurate.

Z Too many colonies were present (TNTC), the numeric value represents the filtration volume.

I The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

? Data is rejected and should not be used. Some of all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.

* Not analyzed due to interference. Note: if reporting data to the U.S. Environmental Protection Agency Water Quality Storage and Retrieval (STORET) date base, a numerical value must be entered. Such values are not meaningful and shall not be used.

If more than one code applies, and the data is to be entered in STORET, only one code shall be reported. The code shall be selected based on the following hierarchy:

?
*, O
Y
V
H
B, K, L, M, I, T, Z, U, N, Q
A, F
J

The following codes deal with certain aspects of field activities. The codes shall be used if the laboratory has knowledge of the specific sampling event. The codes shall be added by the organization collecting samples if they apply:

D Measurement was made in the field (i.e. in situ). This applies to any value (ex. pH, specific conductance, etc.) that was obtained under field conditions using approved analytical methods. Note: When data is to be entered into STORET, and parameter code specifies a field measurement (e.g. "Field pH"), this code is not required.

E Indicates that extra samples were taken at composite stations.

R Significant rain in the past 48 hours. This code shall be used where the rainfall might contribute to a lower than normal value.

! Data deviates from historically established concentration ranges.
