REGISTERED PROFESSIONAL GEOLOGIST CERTIFICATION

I hereby certify that I have directed and supervised the field work and preparation of this document, in accordance with State Rules and Regulations. As a registered professional geologist, I certify that I am a qualified groundwater professional, as defined by the Florida State Board of Professional Geologists. All of the information and laboratory data in this document and in all of the attachments are true, accurate, complete, and in accordance with applicable state rules and regulations.

Justin Vickery, P.G.

1 INTRODUCTION

1.1 Terms of Reference

Environmental Planning Specialists, Inc. (EPS), on behalf of Waste Connections, Inc. (WCI), is pleased to provide this report to the Florida Department of Environmental Protection (FDEP) for the J.E.D. Solid Waste Management (“JED”) facility. This report summarizes and provides interpretation of the water quality monitoring performed in accordance with the Monitoring Plan Implementation Schedule (MPIS) prepared as part of the JED facility permit application. The MPIS requirements are presented in Appendix 3) of the JED facility Operating Permit (Permit No.SO49-0199726-022) issued by the FDEP on July 12, 2012, that authorizes the development of Phases 1 through 4 at the JED facility.

EPS has prepared this report for WCI, parent company of Omni Waste of Osceola County, LLC, owner and operator of the JED facility. A completed water quality certification form (FDEP Form 62-701.900[31]) is included in **Appendix A**.

1.2 Overview

The MPIS establishes a water quality monitoring program that measures and reports groundwater and surface water conditions and groundwater flow direction across the JED facility. The 25th semi-annual water quality monitoring event was completed between November 14 and November 22, 2016. This report presents the sample locations, sampling procedures, laboratory analyses and results, field data measurements, groundwater level measurements, groundwater flow direction, and surface water quality monitoring. In addition, the current analytical results are compared to applicable Groundwater Cleanup Target Levels (GCTLs) as promulgated in Chapter 62-777, Florida Administrative Code (FAC).

1.3 Site Description

The JED facility is in eastern Osceola County, Florida, west of highway U.S. 441, and approximately 6.5 miles south of Holopaw. The facility is a Class I landfill which is linked to highway U.S. 441 by a 2.9-mile access road. The JED facility comprises a total of approximately 2,179 acres. The landfill footprint at build-out will be approximately 360 acres and consist of 23 landfill cells that will provide available waste capacity for a period of approximately 30 years.

In October 2003, the FDEP issued a permit to construct and operate Phase 1 of the JED facility. Phase 1 includes four landfill cells (Cells 1 through 4), located in the northern part of the landfill encompassing approximately 54 acres. All components of the Phase 1 development have been constructed. As part of Phase 1, 45 groundwater monitoring wells were installed in 15 clusters

(MW-1 through MW-15) around the perimeter of the Phase 1 development area. The baseline water quality report for the Phase 1 monitoring well network was submitted to the FDEP in May 2004.

In March 2007, the FDEP issued a permit to construct and operate Phases 2 (Cells 5 through 7) and 3 (Cells 8 through 10), which encompass a total footprint of approximately 72 acres. As part of Phases 2 and 3, and as approved by the FDEP, six existing Phase 1 monitoring wells (MW-14A, B, and C, and MW-15A, B, and C) were decommissioned to allow for the construction of future cells and the construction of a storm water retention basin located within Phases 2 and 3. The decommissioning of the monitoring wells was discussed in the *Phases 2 and 3 Groundwater Monitoring Report* (Geosyntec, January 2008). In September 2007, for the development of Phases 2 and 3, 24 additional monitoring wells were installed in eight well clusters (MW-16 through MW-23) around the perimeter of the Phases 2 and 3 development areas.

In April 2008, the FDEP issued a permit to construct and operate Phases 1 through 3 with vertical expansion. In April 2009, the MPIS for the semi-annual water quality monitoring well network was modified for Phases 1 through 3. The modification included a reduction in the number of Phase 3 monitoring wells requiring semi-annual sampling until such time that waste placement commences in one of the Phase 3 cells (i.e., Cells 8, 9, or 10), and the sampling schedule was modified for B-zone (intermediate depth) and C-zone (deep) monitoring wells. The new schedule included:

1. November sampling of C-zone monitoring wells (MW-1C through MW-13C, MW-16C, and MW-19C through MW-23C) and B-zone monitoring well MW-16B with January reporting.
2. May sampling of B-zone monitoring wells (MW-1B through MW-13B, MW-16B, and MW-19B through MW-23B) and C-zone monitoring well MW-16C, with July reporting.

Cell 1 was completed in January 2004, Cell 4 was completed in May 2005, Cell 2 was completed in April 2006, Cell 3 was completed in October 2006, Cell 5 was completed in October 2007, Cell 6 was completed in July 2008, and Cell 7 was completed in August 2010. In August 2011, the FDEP issued a permit to construct a lateral expansion of the facility, which authorized construction of Phases 3 through 8 (Cells 8 through 23). Cell 8 was completed in April 2012. During construction startup of Cell 8 in November 2011, monitoring well cluster MW-22 (A, B and C) was decommissioned to accommodate the perimeter road access to Cell 8. The MW-22 cluster abandonment report was submitted to the FDEP in April 2012. The well cluster was replaced in March 2012 and located on the perimeter access road approximately 800 feet south of well cluster MW-23. The shallow, intermediate and deep monitoring wells were designated MW-22AR, MW-22BR and MW-22CR, respectively. The *Initial Water Quality Report Monitoring Well Cluster MW-22R* (Geo-Services & Consulting, June 2012) was submitted to the FDEP in July 2012.

The Cell 9 disposal area construction was completed in October 2013. As with previous construction and expansion efforts (e.g., Cell 8 disposal area) well cluster MW-20 was installed in a temporary location on the Phase 3 storm water berm. Cell 9 construction activities included substantial modifications to the berm and as such, the MW-20 well cluster was abandoned on June 24, 2013. At the same time, the MW-16 well cluster was abandoned at its temporary

location. In October 2013, replacement wells MW-16AR, MW-16BR, and MW-16CR were installed in a permanent location on the backside of the perimeter berm near the Cell 9 sump. The monitoring well abandonment and installation report was submitted to the FDEP in November 2013.

On December 24, 2013, a permit minor modification application was submitted to the FDEP to request a modification to the MPIS prior to the initiation of construction of Cell 10 of Phase 3 and Cells 11-13 of Phase 4. The minor modification was approved by the FDEP in January 2014. The major changes include:

- the installation and sampling schedule of monitoring wells for the Phase 3, Cell 10 and Phase 4 construction (includes Cells 11, 12 and 13),
- the removal of the “C” zone wells from the semi-annual sampling schedule, and
- the installation of only “A” and “B” zone wells at the new monitoring well cluster locations.

The January 2014 MPIS modifications were implemented during the 20th semi-annual groundwater sampling event in May 2014. In an email dated May 14, 2014, the FDEP, based on review of past semi-annual water quality monitoring reports, removed total phenols analysis from the laboratory parameters list in requirement 9 of the MPIS.

Construction of the Cell 10 disposal area began in March 2014 which necessitated the abandonment of temporary groundwater monitoring well clusters MW-17, 18, 19 and 21. The wells were located on the Phase 3 interim storm water berm and were abandoned during Cell 10 construction on March 5, 2014. The monitoring well abandonment report was submitted to the FDEP on March 13, 2014. The installation of monitoring well clusters MW-17R, MW-24, MW-25 and MW-26, which are associated with the completion of Cell 10 and initiation of Phase 4 construction activities, was summarized in a report submitted to the FDEP on July 30, 2014.

Construction of the Cell 11 disposal area began in March 2015. As part of the construction, detection monitoring well clusters MW-27, MW-28, and MW-29 were installed along the outside perimeter of the cell in accordance with the MPIS (revised January 30, 2015, FDEP File No. 0199726-027-SO-MM). Per the FDEP Permit requirements, the well clusters included shallow surficial aquifer monitoring wells (MW-27A, MW-28A and MW-29A) and intermediate surficial aquifer monitoring wells (MW-27B, MW-28B and MW-29B). The monitoring well installation report was submitted to the FDEP in September 2015.

Construction of Cell 13 began in December 2015. Detection monitoring wells MW-26A and MW-26B, located on the interim Phase 4 storm water berm, required abandonment to accommodate cell construction. The MW-26 cluster was abandoned on June 15, 2016. Monitoring wells MW-31A and MW-31B were installed on June 16, 2016 as replacements for cluster MW-26 and are located along the west perimeter of Cell 13. A report summarizing the monitoring well abandonment and installation activity was submitted to the FDEP in October 2016.

2 MONITORING WELL DETAILS

2.1 Well Layout and Construction

For the Phase 1 development, 45 groundwater monitoring wells were installed in fifteen clusters (MW-1 through MW-15) around the perimeter of the Phase 1 development area. In accordance with the FDEP permit requirements, monitoring well clusters were located such that the spacing between clusters was no greater than 500 feet. For development of Phases 2 and 3, 24 groundwater monitoring wells were installed in eight clusters (MW-16 through MW-23) around the perimeter of the Phases 2 and 3 development areas. In accordance with the FDEP permit requirements, the monitoring well clusters were located such that the spacing between detection well clusters (MW-16 through MW-21) was approximately 500 feet, and the spacing between background well clusters (MW-22R and MW-23) was approximately 800 feet. Each of these well clusters consists of three groundwater monitoring wells installed: (i) across the water table to monitor the upper limit of the surficial aquifer (identified as A-zone [shallow] wells); (ii) within the lower limit of the upper surficial aquifer above the intermediate clay layer (identified as C-zone [deep] wells); and (iii) at an intermediate depth between the shallow and deep wells (identified as B-zone [intermediate] wells). During the Phase 4, Cell 10 construction, four well clusters (MW-17, MW-18, MW-19 and MW-21) were abandoned and three well clusters (MW-24, MW-25 and MW-26) installed along the Phase 4 interim storm water berm. Monitoring well clusters MW-24 through MW-26 were approximately 1,400 feet apart. In addition, replacement monitoring well cluster MW-17R was installed adjacent to Cell 10. In accordance with the January 2014 MPIS the three new and one replacement well cluster consist of two monitoring wells each, one installed in the A-zone and one in the B-zone.

A layout depicting the location of the shallow (A-zone) groundwater monitoring wells installed for Phases 1 through 4 are shown on **Figure 1**. As shown, groundwater monitoring well clusters MW-1 through MW-13, MW-16R, MW-17R, MW-22R, MW-23, MW-27 through MW-29, and MW-31 were installed along the top of the outer edge of the landfill perimeter berm. The ground surface at the location of the wells in the perimeter berm has an elevation of approximately 92 feet (ft) with respect to National Geodetic Vertical Datum of 1929 (NGVD, 1929). Groundwater monitoring well clusters MW-24 and MW-25 were installed along the Phase 4 interim storm water berm. The ground surface at these two well locations has an elevation of approximately 84 feet NGVD, 1929. The location of each well, in Florida state plane coordinates and latitude/longitude, and elevation were surveyed by a Florida-registered professional land surveyor.

Wells were constructed with 2-inch diameter Schedule 40 polyvinyl chloride (PVC) casing and 10 ft of #6-slot (0.006-in.) PVC screen. A 30/45 graded silica sand was placed around the screen to a height of 2 to 3 ft above the top of the screen. A seal of 30/65 graded fine silica sand was placed above the sand filter around the screen. The remaining annular space from the top of the fine sand filter seal to the existing ground surface was grouted using a tremie pipe with a cement/bentonite mixture containing no more than 5 percent bentonite by dry weight. The PVC

well casings were extended approximately 2.5 to 3 ft above the existing ground surface. Surface completion consisted of a protective aluminum casing with a lockable cover set in a concrete pad. Each well was provided with a well cap, padlock, and an identification label. A summary of the monitoring well construction details are presented in **Table 1**.

2.2 Turbidity Issues

As discussed in the baseline water quality reports for the Phases 1 through 4 monitoring networks, the formation around the screened intervals consists primarily of a fine, brown to dark brown, silty sand. Due to the subsurface formation properties, fine-grained and colloidal material are able to pass through the sand filter pack in many wells, primarily in the B-zone and C-zone wells. This is the case even though the wells are constructed using the smallest screen slot size (0.006 in.) commonly available. Most of the intermediate and deep wells had turbidity values in excess of the 20 nephelometric turbidity unit (NTU) criterion even after extended well development and the removal of multiple well volumes.

The difficulty in attaining the desired turbidity criterion was originally discussed at a meeting between Geosyntec Consultants (Geosyntec) and the FDEP on January 12, 2004 during the well development activities associated with the wells installed as part of the Phase 1 development. Geosyntec notified the FDEP again on September 14, 2007 of the elevated turbidity levels observed after extended well development during the Phases 2 and 3 monitoring well development. In accordance with these discussions, it was agreed to collect field-filtered (1-micron) and unfiltered samples for metals analyses for any sample with a turbidity value greater than 20 NTUs. The data generated by the dual sampling is expected to help demonstrate: (i) what effect turbidity may have on metal analyses (i.e., by comparing total and dissolved metals concentrations) and (ii) whether groundwater samples with turbidities greater than 20 NTUs show higher concentrations of metals than those samples with turbidities less than 20 NTUs.

3 MONITORING WELL SAMPLING

3.1 Sampling Locations and Procedures

In accordance with the MPIS, twenty-six monitoring wells installed as part of the Phase 1 development, eight of the monitoring wells installed as part of the Phase 2 and 3 developments, and twelve monitoring wells installed as part of the Phase 4 development were sampled during the 25th semi-annual sampling event. Monitoring wells sampled this event included A and B-zone wells MW-1 through MW-13, MW-16R, MW-17R, MW-22R, MW-23, MW-24, MW-25, MW-27 through MW-29, and MW-31. Low-flow sampling techniques were used for groundwater sample collection. Except for the turbidity considerations as described in the previous section, all groundwater sampling was performed in accordance with the current applicable FDEP Standard Operating Procedures (DEP-SOP-001-01, March 2014) for groundwater sampling. Additionally, for quality control (QC) purposes, one blind duplicate sample and one equipment blank were collected and analyzed. Peristaltic pumps were used to purge and sample forty of the monitoring wells, and electric submersible pumps were used to sample the remaining six wells. Each monitoring well was purged and sampled using new tubing (silicone and/or high density polyethylene).

During the purging process, a YSI 556 water quality meter equipped with a flow-through cell was used to monitor the following field parameters: pH; temperature; conductivity; oxidation-reduction potential (ORP); and dissolved oxygen. Turbidity levels were measured using a LaMotte 2020e turbidity meter. Field parameters were recorded on sample collection forms, which are included in **Appendix B**. When the field parameters stabilized within the acceptable tolerances required by the FDEP SOP, well purging was considered complete and groundwater samples were collected.

The calibration of the water quality monitoring instruments was checked daily and re-calibrated when necessary. Water quality instrument calibration forms are presented in **Appendix C**. Samples were placed in coolers and packed with bagged ice for transport to the analytical laboratory. Chain-of-Custody (COC) forms were completed and accompanied the samples to the analytical laboratory. All COC forms are included in **Appendix D**. Security seals were affixed to every cooler shipped.

3.2 Sample Analyses

Samples were analyzed by Advanced Environmental Laboratories (AEL) in Jacksonville, Florida in accordance with the National Environmental Laboratory Accreditation Conference (NELAC) standards. AEL holds certification from the Florida Department of Health (FDOH) for the analytical test methods used for this project and is certified in the State of Florida for analysis of environmental samples.

Groundwater samples were analyzed by AEL for total ammonia as nitrogen (N), chlorides, nitrate, total dissolved solids (TDS), iron, mercury, sodium, and the 40 Code of Federal Regulations (CFR) Part 258 Appendix I parameters. Other required parameters (i.e., pH; temperature; conductivity; turbidity; ORP; and dissolved oxygen) were measured in the field during collection of the groundwater samples.

4 SAMPLING RESULTS

4.1 Field Parameters

Table 2 provides a summary of the field measurements of selected water quality parameters utilized for determining sample stability for this semi-annual monitoring event. The secondary drinking water standard (SDWS) range for pH is 6.5 to 8.5 standard units (SU). The groundwater pH was below the SDWS in all site wells sampled this event with pH values ranging from 4.10 to 6.15 SU. The groundwater pH values measured at the site have historically been below the SDWS lower limit of 6.5 SU.

4.2 Laboratory Analytical Results

The analytical laboratory results for this groundwater sampling event are included in **Appendix E**. Analytical results have been summarized in **Table 3** to show all parameters where a constituent concentration was reported above the laboratory practical quantitation limit (PQL). Any parameter exceeding the applicable FDEM Groundwater Cleanup Target Level (GCTL) has been highlighted orange. Detections reported above the PQL but below the GCTL have been highlighted green and detections between the PQL and laboratory method detection limit (MDL) are highlighted blue. The following discussion regarding groundwater quality is limited to those parameters where the GCTL was exceeded in at least one groundwater monitoring well and has been organized by analytical method.

4.2.1 Total Metals (Methods 6020B and 6010B)

4.2.1.1 Iron

Iron was detected above the GCTL of 300 µg/L in nineteen of the A-zone monitoring wells sampled, with the concentrations ranging between 430 and 19,000 µg/L and the highest concentration being from MW-4A. Iron was detected above the GCTL in twenty of the B-zone monitoring wells sampled this event, with concentrations ranging between 440 and 40,000 µg/L and the highest concentration being from MW-2B. Iron has historically exceeded the GCTL in most wells at the site for all monitoring events, including the baseline events. The iron concentrations reported for the 25th semi-annual event are consistent with period of record data.

4.2.1.2 Lead

Lead was detected above the GCTL of 15 µg/L in monitoring well MW-31B (100 µg/L). MW-31B had a lead concentration of 130 µg/L during the baseline sampling event. These elevated lead detections are likely due to the high turbidity levels in the sample. As discussed in Section 2.2, high turbidity levels in newly installed B-zone wells at the JED facility have historically had

turbidities much greater than 20 NTU; however based on Phase 1 through 3 B-zone wells it is anticipated to improve with time.

4.2.1.3 Sodium

Sodium was detected above the GCTL of 160 mg/L in monitoring well MW-1A (280 mg/L) and MW-16AR (240 mg/L).

4.2.1.4 Vanadium

Vanadium was detected above the GCTL of 49 µg/L in monitoring well MW-31B (130 µg/L). MW-31B had a vanadium concentration of 211 µg/L during the baseline sampling event. These elevated lead detections are likely due to high turbidity levels in the sample.

4.2.2 Ammonia-N (Method 350.1)

Ammonia was detected above the groundwater cleanup target level (GCTL) of 2.8 mg/L in twelve of the shallow monitoring wells, with concentrations ranging from 3.8 mg/L to 17 mg/L and the highest concentration being from MW-3A. Ammonia was detected in six of the intermediate monitoring wells, with concentrations ranging from 3.3 mg/L to 8.9 mg/L and the highest concentration being from MW-4B. Ammonia has been detected in most of these wells during previous sampling events. Under reducing geochemical conditions, nitrogen containing compounds can be converted to ammonia. Reducing conditions are favorable in the shallow aquifer at the site and may develop in several ways such as the shadow effect of the lined disposal areas preventing the infiltration of oxygen-rich precipitation, displacement of oxygen by landfill gas immediately above the water table, or high organic matter content found in site soils which promotes the growth of oxygen consuming microorganisms (HDR Engineering, Inc., *Class I Permit Renewal Request for Additional Information*, January 2012). The elevated levels of ammonia are likely naturally occurring and have been discussed extensively in the *24th Semi-Annual Water Quality Monitoring Report* (Geosyntec, August 2016), the *5th Technical Report on Water Quality* (Geosyntec, July 2014) and in correspondence by HDR Engineering, Inc. (*Class I Permit Renewal Request for Additional Information*, January 2012).

4.2.3 TDS (Method SM 2540C)

TDS concentrations were detected above the GCTL of 500 mg/L in seven shallow monitoring wells, with concentrations ranging from 650 mg/L to 2,000 mg/L and the highest concentration being from MW-16AR. TDS concentrations were detected above the GCTL of 500 mg/L in ten intermediate monitoring wells, with concentrations ranging from 600 mg/L to 1,600 mg/L and the highest concentration being from MW-5B. TDS is an indicator parameter whose value can be attributable to the presence of major cations and anions, such as calcium, magnesium, sodium, chloride, and sulfate.

4.2.4 Chloride (Method 300.0)

Chloride was detected above the GCTL of 250 mg/L in shallow monitoring wells MW-1A (530 mg/L) and MW-16AR (420 mg/L). The remaining monitoring wells are consistent with period of record data.

4.2.5 Nitrate (Method 300.0)

Nitrate was detected above the GCTL of 10 mg/L in shallow monitoring wells MW-16AR (51 mg/L) and MW-17AR (17 mg/L). The remaining monitoring wells are consistent with period of record data.

4.2.6 40 CFR Part 258, Appendix I Volatile Compounds (Method 8260)

4.2.6.1 Benzene

Benzene was detected above the GCTL of 1.0 µg/L in seven A-zone monitoring wells, with concentrations ranging from 3.5 to 7.7 µg/L and the highest concentration being from MW-9A Duplicate. It was also detected in intermediate well MW-10B at a concentration of 5.6 µg/L. Benzene has been reported above the GCTL in most of these wells during previous monitoring events at similar concentrations.

As indicated in correspondence by HDR Engineering, Inc. (*Class I Permit Renewal Request for Additional Information*, January 2012) and by Geosyntec (*Groundwater Contamination and Landfill Gas Migration Investigation and Assessment*, December 2013) the source of benzene in groundwater is likely attributed to landfill gas. As discussed in the reports mentioned above, neither the constituents nor the concentrations of VOCs detected in groundwater appear to correlate well with leachate results.

4.2.6.2 1,2-Dibromo-3-chloropropane

1,2-Dibromo-3-chloropropane was reported above the GCTL of 0.2 µg/L in monitoring well MW-22AR (2.9 µg/L). This parameter has not been detected in site wells previously and may be anomalous.

4.3 Data Validation

All laboratory analyses were performed within the method-specified hold times with the exception of twelve nitrate analyses (MW-17AR, MW-17BR, MW-22AR, MW-22BR, MW-23A, MW-23B, MW-24A, MW-24B, MW-29A, MW-29B, MW-31A and MW-31B). This was caused by an inadvertent sample receiving error, and the laboratory states that they believe the impact on the data is minimal. These instances are noted in the laboratory case narratives.

One blind duplicate sample (16322-MW-Dup) was collected during the 25th semi-annual monitoring event. The duplicate sample was collected concurrently with the sample from monitoring well MW-9A. Results of the duplicate sample are included in **Table 3**. In addition,

following the collection of the sample from MW-25B, the stainless-steel submersible pump was decontaminated, a new length of HDPE tubing attached and using lab supplied de-ionized water, an equipment blank collected (16320-EB). The equipment blank was analyzed for the same parameters as the groundwater samples. Analysis of the equipment blank sample resulted in a detection of chromium (0.56 µg/L), zinc (9.7 µg/L), carbon disulfide (0.28 µg/L), chloromethane (0.74 µg/L) and ethylbenzene (0.25 µg/L) at concentrations below the PQL and toluene at a concentration of 2.9 µg/L. These detections may be attributed to laboratory artifacts, several of the constituents [e.g. carbon disulfide, chloromethane, ethylbenzene] were not detected in any of the wells sampled with the submersible pump. All other constituents analyzed for were not detected in the equipment blank sample.

4.4 Impact of Turbidity on Metals Concentrations

A turbidity of less than 20 NTUs was achieved in all but three monitoring wells this event. Monitoring wells exceeding the FDEP guidance of 20 NTUs were B-zone wells MW-25B (57.9 NTUs), MW-27B (49.2 NTUs) and MW-31B (112 NTUs). These wells were purged using a stainless-steel submersible pump, and more than five well volumes were removed from each well. Samples were collected after the third reading in which turbidity levels were within 5 NTUs or 10% (whichever was greater) as stipulated in the FDEP SOP. Of these wells, MW-31B had concentrations of lead and vanadium exceeding the GCTL. Lead and vanadium have not typically exceeded the GCTL in site wells and the concentrations seen in MW-31B are likely associated with the high turbidity levels in the sample.

5 GROUNDWATER LEVEL MEASUREMENTS AND FLOW DIRECTION

5.1 Field Measurements

Groundwater level measurements were obtained on November 14, 2016 from all Phase 1 through 4 monitoring wells and the remaining piezometers installed as part of the original site hydrogeological investigation. The groundwater level measurements were made within an approximate 4-hr period. **Table 4** contains the groundwater level measurements and calculated groundwater elevations from the monitoring wells and piezometers.

5.2 Water Level Contours

The water level contour map prepared from groundwater level measurements for the surficial aquifer in the A-zone (shallow) is presented in **Figure 1**. Historically, the direction of the horizontal component of groundwater flow for all three zones is predominantly east-northeast towards Bull Creek. The groundwater elevation data collected on November 14, 2016 from the A-zone monitoring well network indicates the general direction of groundwater flow on the northern portion of the site to the east-southeast; however, on the southern half of the site, groundwater flow is generally towards the west-southwest. The overall complexity of the water-table may be a reflection of anthropogenic features on site, which include storm water control structures (e.g., retention ponds and ditches) adjacent to the disposal cells. These features, particularly to the southeast of the disposal areas, are extensive and at times may potentially control shallow groundwater flows within their immediate vicinity.

6 SURFACE WATER SAMPLING

6.1 Sampling Locations and Procedures

Two surface water sampling locations (**Figure 1**) established during the initial hydrogeological investigation were selected by the FDEP for routine water quality monitoring. As stated in the Permit, surface water samples are only to be collected when there is flow in Bull Creek. During the 25th semi-annual water quality monitoring event, flow was observed in Bull Creek at the upstream (SW-4) and downstream (SW-3) monitoring locations and surface water samples were collected at each. Surface water samples were collected from the approximate center of Bull Creek at mid-depth. A YSI 556 water quality meter was used to measure field parameters including temperature, pH, dissolved oxygen and specific conductance at each sampling location. Turbidity levels were measured using a LaMotte 2020e turbidity meter. Surface water samples were collected in accordance with the FDEP surface water sampling SOPs.

6.2 Sample Analyses

Surface water samples were analyzed by AEL in accordance with the NELAC (National Environmental Laboratory Accreditation Conference) standards for unionized ammonia, total hardness as CaCO₃, total organic carbon (TOC), chlorides, nitrate, TDS, total suspended solids (TSS), biochemical oxygen demand (BOD), chemical oxygen demand (COD), total nitrogen, nitrate, total phosphates as P, chlorophyll A, iron, mercury, fecal coliform, and the 40 CFR, Part 258 Appendix I parameters. Other required parameters (e.g., pH, temperature, specific conductance, turbidity, and dissolved oxygen) were field-measured during collection of the surface water samples.

6.3 Field Measurements and Analytical Results

Table 5 provides a summary of the field parameter values and laboratory analytical results for the surface water samples. The analytical laboratory report is included in **Appendix E**. Parameters exceeding the Surface Water Quality Criteria (SWQC) Class III concentrations are discussed below:

6.3.1 pH

The pH at SW-3 (3.90 SU) and SW-4 (4.10 SU) were outside of the criteria designated in 62-302.530(96)(c) FAC, i.e, *if natural background is less than 6 units in predominantly fresh waters or 6.5 units in predominantly marine waters, the pH shall not vary below natural background or vary more than one unit above natural background of predominantly fresh waters and coastal waters, or more than two-tenths unit above natural background of open waters*. The pH at locations SW-3 and SW-4 measured in the initial site investigation conducted by Kubal-Furr &

Associates (Kubal-Furr) for the JED facility was 5.86 and 5.40 SU's, respectively (*Hydrogeologic Investigation Report and Water Quality Monitoring Plan*, April 2002). Please note that at the time the initial pH measurements were taken by Kubal-Furr, Bull Creek was not flowing. Bull Creek is a shallow, narrow waterway that is highly dependent on seasonal precipitation and given that the median pH for precipitation in Florida is 4.77 SU (Maddox, et.al., 1992), it would not be uncommon for the creek to see pH levels lower than what was observed in the initial investigation.

6.3.2 Iron

The SWQC for iron of 1 mg/L was exceeded in upstream surface water monitoring station SW-4 (1.4 mg/L), but the downstream sample, SW-3 (0.68 mg/L), was below the SWQC.

7 CONCLUSIONS AND RECOMMENDATIONS

7.1 Sampling Locations

The existing monitoring well network is adequate for monitoring purposes and no changes are recommended.

7.2 Sample Analyses

The detections of ammonia, iron, sodium, chloride and TDS above the GCTLs in specific groundwater monitoring wells have been discussed in detail in the 1st, 2nd, 3rd, 4th and 5th Technical Reports on Water Quality (November 2006, September 2008, November 2010, November 2011 and July 2014, respectively). As discussed in Section 4.2, it is likely that the iron and ammonia are not related to a leachate release from the disposal boundary, but rather mobilization of these constituents due to the presence of nitrogen containing compounds under reducing conditions. Our recommendation is to continue to monitor these constituents as part of the current MPIS.

The ammonia, sodium, chloride, nitrate and TDS in MW-16AR and nitrate in MW-17AR are elevated this sampling event. These are leachate indicator parameters; however, a release of leachate is not suspected to be the cause of the increase. Rather, these detections are likely due to storm water runoff and cover soil erosion from uncapped areas that occurred within the past year directly upslope between the Cell 6 and Cell 9 sump areas. Omni has assessed the storm water drainage issues in this area and is in the process of evaluating different control measures (e.g. geosynthetic tarps). Once control measures are implemented, concentrations of these constituents are expected to decrease in the well over time. Our recommendation is to continue to monitor these constituents as part of the current MPIS.

The detections of benzene have been consistent in select monitoring wells and, as discussed in Section 4.2 as well as prior submittals to the FDEP, may be attributable to landfill gas migration. Currently, our recommendation is to continue semi-annual monitoring of these constituents as part of the current MPIS.

Notes: Well caps removed site wide and wells allowed to stabilize prior to measurements.

(1):Monitoring well total depths were measured following the November 2016 water quality monitoring event

Table 5

SUMMARY OF SURFACE WATER FIELD MEASUREMENTS AND ANALYTICAL RESULTS
25th SEMI-ANNUAL WATER QUALITY MONITORING EVENT
J.E.D. SOLID WASTE MANAGEMENT FACILITY
November 2016

Parameter Monitored	FL-SWQC Class III / or SWCTL	Units	Monitoring Results	
			SW-3 (Downstream)	SW-4 (Upstream)
Field Parameters				
Dissolved Oxygen	38% Saturation ⁽¹⁾	mg/l	4.03	3.10
pH	Not less than background ⁽²⁾	SU	3.90	4.10
Conductivity	< 50% above background or 1,275, whichever is >	µS/cm	195	196
Temperature at Sampling Time	--	°C	15.72	15.33
Turbidity	< 29 above background	NTU	2.6	0
Water Elevation ⁽³⁾	--	feet	73.30	77.45
Laboratory Parameters				
1,2-Dichlorobenzene	99	ug/L	1.6	0.18 U
1,4-Dichlorobenzene	3	ug/L	1.3	0.22 U
4-Methyl-2-pentanone (MIBK)	23,000	ug/L	1.6	0.47 U
Acetone	1,700	ug/L	6.3	2.1 U
1,2-Dibromo-3-Chloropropane	--	ug/L	3.3	0.11 UJ4
Ethylene Dibromide (EDB)	13	ug/L	0.79	0.02 UJ4
Barium	-	ug/L	22	35
Iron	1	mg/L	0.68	1.4
Zinc	61/120 ⁽⁴⁾	µg/L	12	18
BOD	-	mg/L	2.0 U	2.0 U
Chlorophyll a	-	mg/m ³	1.6	1.6
COD	-	mg/L	54	74
Fecal Coliform	800	#/100 mL	164	100
Hardness as CaCO ₃	-	mg/L	45	100
Nitrogen, Total as N	-	mg/L	0.82	1.5
Organic Carbon, Total	-	mg/L	18	22
Phosphorus, Total	-	mg/L	0.05 U	0.092 i
Total Dissolved Solids	-	mg/L	180	220
Total Suspended Solids	-	mg/L	2.8	2

Notes:

Only parameters with detections above the Method Reporting Limit are shown.

(1): Per 62-302.533(1)(a)2

(2): Per 62-302.530(96)(c); If natural background is less than 6 units, in predominantly fresh waters the pH shall not vary below natural background or vary more than one unit above natural background.

The pH of SW-3 and SW-4 in the 1st Semi-Annual Water Quality Event (November 2004) was 4.37 and 3.72 SU's, respectively.

(3): Surface Water Elevations referenced to NGVD 1929

(4): Zinc criteria is less than or equal to: $e(0.8473[\ln H]+0.884)$ where lnH is the natural logarithm of total hardness as mg/L CaCO₃

Concentrations in shaded cells did not meet the GCTL or FL-SWQC Class III Criteria.

i = The reported value is between the laboratory Method Detection Limit and the laboratory

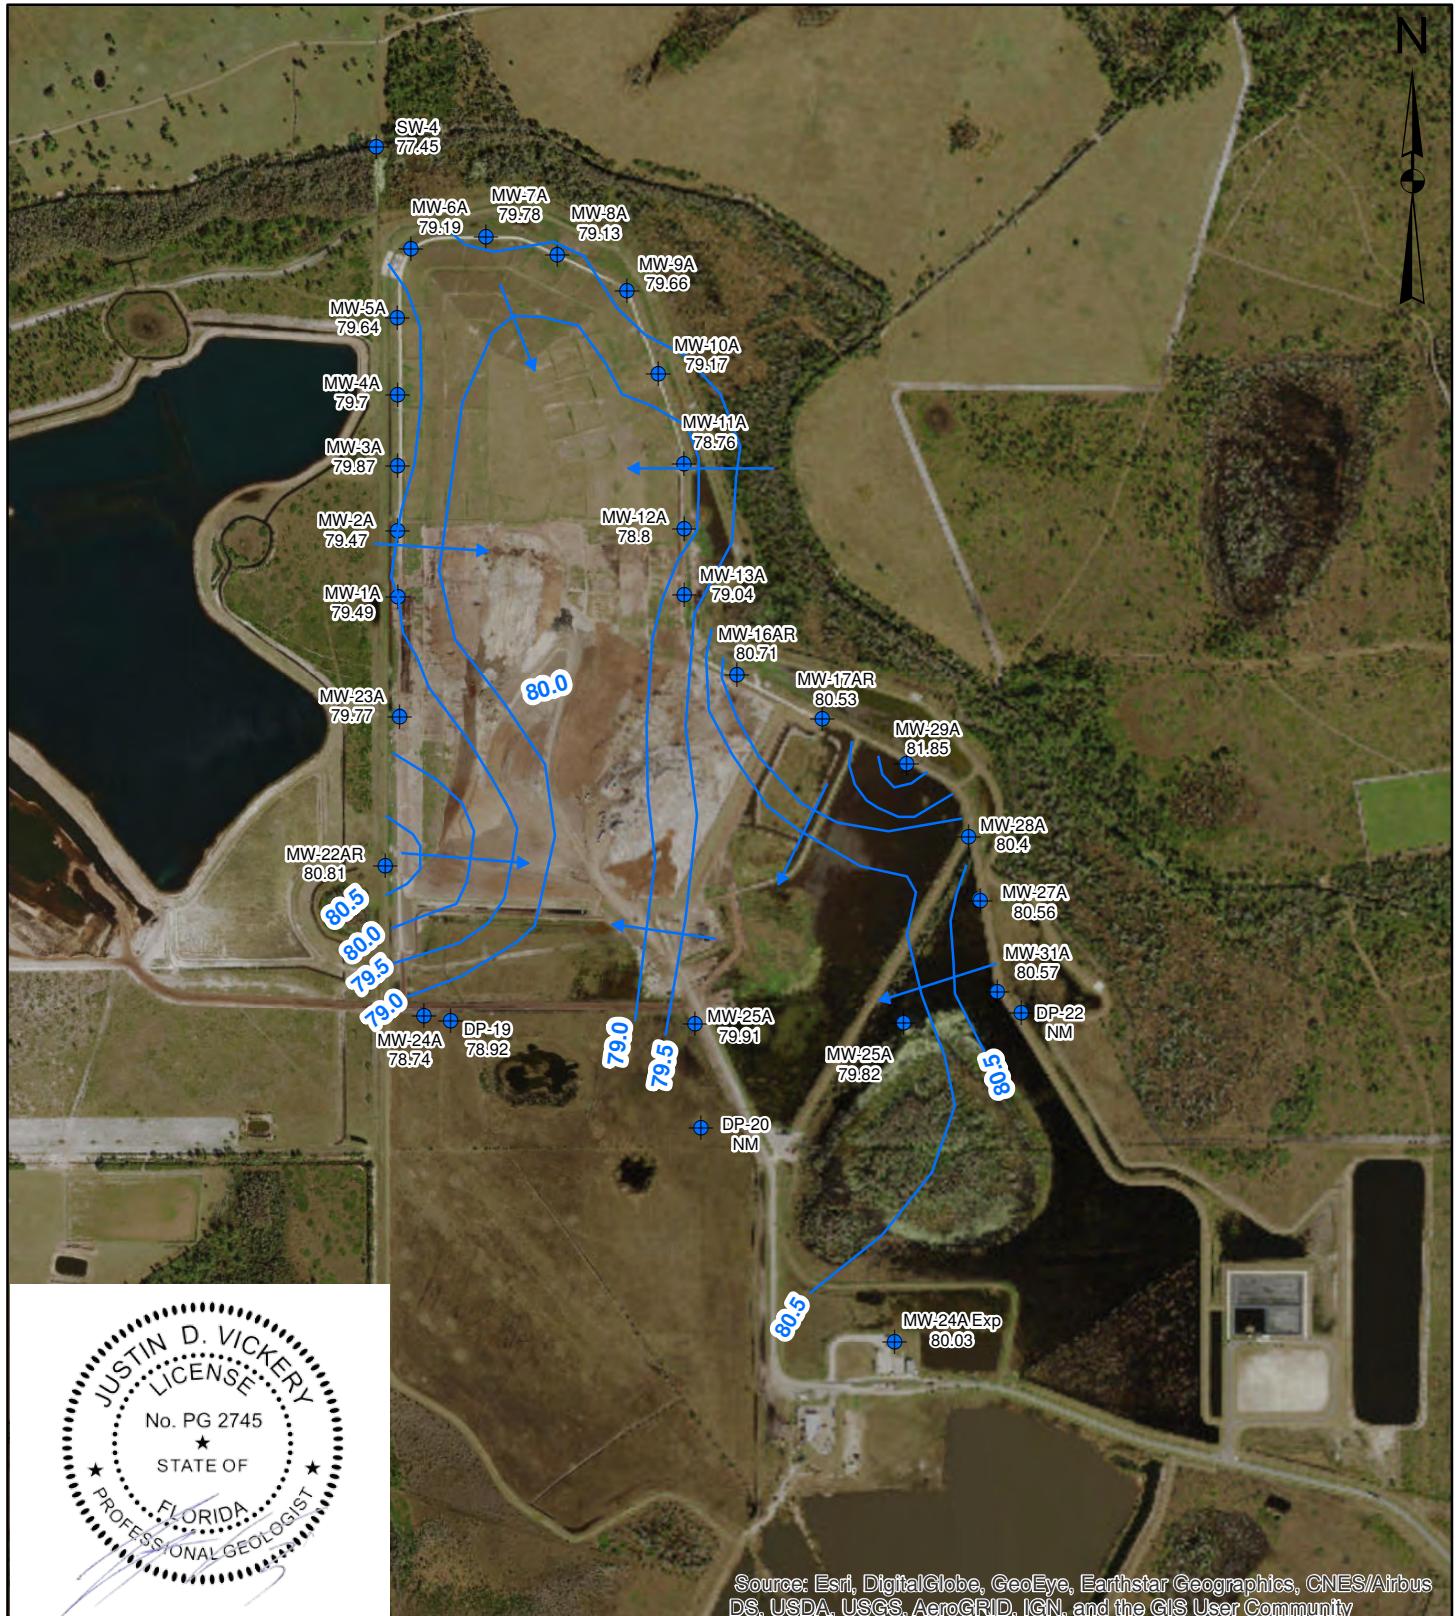

Practical Quantitation Limit

U = indicates that the compound was analyzed for but not detected at or above the value shown

J4 = Estimated Result

APPENDIX A
Water Quality Monitoring Certification
FDEP Form 62-701.900(31)

Florida Department of Environmental Protection

Bob Martinez Center
2600 Blair Stone Road
Tallahassee, Florida 32399-2400

DEP Form # 62-701.900(31), F.A.C.
Form Title: Water Quality Monitoring Certification
Effective Date: January 6, 2010
Incorporated in Rule 62-701.510(9), F.A.C.

WATER QUALITY MONITORING CERTIFICATION

PART I GENERAL INFORMATION

(1) Facility Name J.E.D. Soild Waste Management Facility

Address 1501 Omni Way

City Saint Cloud Zip 34773 County Osceola

Telephone Number (407) 891-3720

(2) WACS Facility ID 89544

(3) DEP Permit Number SO49-0199726-022

(4) Authorized Representative's Name Kirk Wills Title South Region Engineer

Address 5135 Madison Avenue

City Tampa Zip 33619 County Hillsborough

Telephone Number (813) 388-1026

Email address (if available) kirk.wills@wasteconnections.com

CERTIFICATION

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submission of false information including the possibility of fine and imprisonment.

February 21, 2017
(Date)

(Owner or Authorized Representative's Signature)

PART II QUALITY ASSURANCE REQUIREMENTS

Sampling Organization Environmental Planning Specialists, Inc.

Analytical Lab NELAC / HRS Certification # E82574

Lab Name Advanced Environmental Laboratories, Inc.

Address 6681 Southpoint Parkway, Jacksonville, Florida 32216

Phone Number (904) 363-9350

Email address (if available) CMyers@AELLab.com

Northwest District
160 Government Center
Pensacola, FL 32501-5794

RE: Workorder: J1611402 J.E.D. Landfill

Dear Kirk Wills:

Enclosed are the analytical results for sample(s) received by the laboratory on Wednesday, November 23, 2016. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report. The analytical results for the samples contained in this report were submitted for analysis as outlined by the Chain of Custody and results pertain only to these samples.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read 'Craig Myers'.

Craig Myers - Client Services Manager

Any discrepancies should be explained in the "Comments" section below.

CHECKLIST		YES	NO	NA
1. Were custody seals on shipping container(s) intact?				/
2. Were custody papers properly included with samples?		/		
3. Were custody papers properly filled out (ink, signed, match labels)?		/		
4. Did all bottles arrive in good condition (unbroken)?		/		
5. Were all bottle labels complete (sample #, date, signed, analysis, preservatives)?		/		
6. Did the sample labels agree with the chain of custody?		/		
7. Were correct bottles used for the tests indicated?		/		
8. Were proper sample preservation techniques indicated on the label?		/		
9. Were samples received within holding times?		/		
10. Were all VOA vials free of the presence of air bubbles?		/		
11. Have all Soil VOA Vials and Encores been placed in a freezer within 48 hours of collection?				/
12. Were samples in direct contact with wet ice? If "No," check one: <input type="checkbox"/> NO ICE <input type="checkbox"/> BLUE ICE		/		
13. Was the cooler temperature less than 6°C?		/		
14. Where pH preservation is required, are sample pHs checked and any anomalies recorded by Sample control? Are all <2 or >10? Note: VOA samples are checked by laboratory analysts.		/		
15. Was sufficient sample volume provided to perform all tests?		/		
16. If for Bacteriological testing, were containers supplied by AEL? (See QA officer if answer is no)				/
17. Were all sample containers provided by AEL? (Other than Bacteriological)		/		
18. Were samples accepted into the laboratory?		/		
19. When necessary to split samples into other bottles, is it noted in the comments?		/		

Comments: (Note all sample(s) and container(s) with a "No" checklist response in this comment section)

Preparation:

Analysis:

III. Method

Analysis: SW-846 8260B (SIM)

Preparation: SW-846 5030B

IV. Preparation

V. Analysis

A. Calibration:

B. Blanks:

C. Surrogates: The control criteria were exceeded for surrogates 1,2-dichloroethane,d4 and toluene-d8 in LCSD and MS. The control criteria were exceeded for surrogates 1,2-dichloroethane,d4, toluene-d8, and bromofluorobenzene in LCS. No samples were analyzed following the LCSD. The associated QC analysis recoveries of target compounds in the LCS were in control, indicating the analysis was in control. The surrogate outliers were flagged accordingly. No further corrective action was required.

The control criterion was exceeded for the following surrogate in several samples due to matrix interferences: 1,2-dichloroethane-d4, toluene-d8, bromofluorobenzene. Due to the presence of non-target background components that prevented adequate resolution of the surrogate, accurate quantitation was not possible. The affected surrogate is qualified accordingly.

D. Spikes: The spike recovery of DBCP for the Laboratory Control Sample duplicate(LCSD) was outside the upper control criterion. The analyte in question was not detected in the associated client samples. The error associated with elevated recovery equates to a high bias. The sample data is not significantly affected. No further corrective action was required.

The matrix spike recoveries of DBCP for J161134009 was outside control criteria due to the presence of target analytes in the sample. Recovery in the Laboratory Control Sample (LCS) was acceptable, which indicates the analytical batch was in control. The matrix spike outlier suggests a potential high bias in this matrix. The affected sample is qualified to indicate matrix interference.

I certify that this data package is in compliance with the terms and conditions agreed to by Advanced Environmental Laboratories, Inc. and by the client, both technically and for completeness, except for the conditions detailed above. RE: Workorder: J1611340 J.E.D. Landfill

Dear Kirk Wills:

Enclosed are the analytical results for sample(s) received by the laboratory on Tuesday, November 22, 2016. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report. The analytical results for the samples contained in this report were submitted for analysis as outlined by the Chain of Custody and results pertain only to these samples.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read 'Craig Myers'.

Craig Myers

- I The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- J1 Surrogate Failure
- J4 Estimated Result
- V Method Blank Contamination

Other Information:

Any discrepancies should be explained in the "Comments" section below.

CHECKLIST		
	YES	NO
1. Were custody seals on shipping container(s) intact?	/	
2. Were custody papers properly included with samples?	/	
3. Were custody papers properly filled out (ink, signed, match labels)?	/	
4. Did all bottles arrive in good condition (unbroken)?	/	
5. Were all bottle labels complete (sample #, date, signed, analysis, preservatives)?	/	
6. Did the sample labels agree with the chain of custody?	/	
7. Were correct bottles used for the tests indicated?	/	
8. Were proper sample preservation techniques indicated on the label?	/	
9. Were samples received within holding times?	/	
10. Were all VOA vials free of the presence of air bubbles?	/	
11. Have all Soil VOA Vials and Encores been placed in a freezer within 48 hours of collection?		/
12. Were samples in direct contact with wet ice? If "No," check one: <input type="checkbox"/> NO ICE <input type="checkbox"/> BLUE ICE	/	
13. Was the cooler temperature less than 6°C?	/	
14. Where pH preservation is required, are sample pHs checked and any anomalies recorded by Sample control? Are all <2 or >10? Note: VOA samples are checked by laboratory analysts.	/	
15. Was sufficient sample volume provided to perform all tests?	/	
16. If for Bacteriological testing, were containers supplied by AEL? (See QA officer if answer is no)		/
17. Were all sample containers provided by AEL? (Other than Bacteriological)	/	
18. Were samples accepted into the laboratory?	/	
19. When necessary to split samples into other bottles, is it noted in the comments?	/	

Comments: (Note all sample(s) and container(s) with a "No" checklist response in this comment section)

Project No.: J1611340

Client Name: Waste Connections

ProjectID: J.E.D. Landfill

I. Receipt

No Exceptions were encountered.

II. Holding Times

Preparation: All holding times were met.

Analysis: All holding times were met.

III. Method

Analysis: SW-846 8260B (SIM)

Preparation: SW-846 5030B

IV. Preparation

Sample preparation proceeded normally.

V. Analysis

A. Calibration: All acceptance criteria were met.

B. Blanks: All acceptance criteria were met.

C. Surrogates: The control criteria were exceeded for surrogate 1,2-dichloroethane-d4 in the LCSD. The associated QC analysis recoveries of target compounds were in control, indicating the analysis was in control. The surrogate outliers were flagged according to the laboratory's quality assurance procedures.

D. Spikes: The matrix spike (MS) recoveries of EDB, DBCP for sample J161276007 were outside control criteria. Recoveries in the Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were acceptable, which indicates the analytical batch was in control.

E. Internal Standard: All acceptance criteria were met.

F. Samples: Sample analyses proceeded normally.

G. Other:

I certify that this data package is in compliance with the terms and conditions agreed to by Advanced Environmental Laboratories, Inc. and by the client, both technically and for completeness, except for the conditions detailed above. The Quality Assurance Officer, or designee, as verified by the following signature, has authorized release of the data contained in this data package:

Project No.: J1611340

Client Name: Waste Connections

ProjectID: J.E.D. Landfill

I. Receipt

II. Holding Times

Preparation:

Analysis:

III. Method

Analysis: SW-846 8260B (SIM)

Preparation: SW-846 5030B

IV. Preparation

V. Analysis

A. Calibration:

B. Blanks:

C. Surrogates: The control criteria were exceeded for surrogates 1,2-dichloroethane,d4 and toluene-d8 in LCSD and MS. The control criteria were exceeded for surrogates 1,2-dichloroethane,d4, toluene-d8, and bromofluorobenzene in LCS.

D. Spikes: The spike recovery of DBCP for the Laboratory Control Sample) uplicate(LCSD) was outside the upper control criterion. The analyte in question was not detected in the associated client samples. The error associated with elevated recovery equates to a high

E. Internal Standard:

F. Samples:

G. Other:

I certify that this data package is in compliance with the terms and conditions agreed to by Advanced Environmental Laboratories, Inc. and by the client, both technically and for completeness, except for the conditions detailed above. The Quality Assurance Officer, or designee, as verified by the following signature, has authorized release of the data contained in this data package:

Project No.: J1611340

Client Name: Waste Connections

ProjectID: J.E.D. Landfill

I. Receipt

No Exceptions were encountered.

II. Holding Times

Preparation: All holding times were met.

Analysis: All holding times were met.

III. Method

Analysis: EPA 300.0

Preparation: None

IV. Preparation

Multiple samples in client project J1611340 were diluted prior to instrumental analysis. The extracts were highly colored which indicated the need to perform a dilution prior to injection into the instrument.

V. Analysis

A. Calibration: All acceptance criteria were met.

B. Blanks: All acceptance criteria were met.

C. Duplicates:

D. Spikes:

E. Serial Dilution:

F. Samples: Sample analyses proceeded normally.

G. Other:

I certify that this data package is in compliance with the terms and conditions agreed to by Advanced Environmental Laboratories, Inc. and by the client, both technically and for completeness, except for the conditions detailed above. RE: Workorder: J1611270 J.E.D. Landfill

Dear Kirk Wills:

Enclosed are the analytical results for sample(s) received by the laboratory on Friday, November 18, 2016. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report. The analytical results for the samples contained in this report were submitted for analysis as outlined by the Chain of Custody and results pertain only to these samples.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read 'Craig Myers'.

Craig Myers

Other Information:

Any discrepancies should be explained in the "Comments" section below.

CHECKLIST	YES	NO	NA
1. Were custody seals on shipping container(s) intact?	/	/	
2. Were custody papers properly included with samples?	/	/	
3. Were custody papers properly filled out (ink, signed, match labels)?	/	/	
4. Did all bottles arrive in good condition (unbroken)?	/	/	
5. Were all bottle labels complete (sample #, date, signed, analysis, preservatives)?	/	/	
6. Did the sample labels agree with the chain of custody?	/	/	
7. Were correct bottles used for the tests indicated?	/	/	
8. Were proper sample preservation techniques indicated on the label?	/	/	
9. Were samples received within holding times?	/	/	
10. Were all VOA vials free of the presence of air bubbles?	/	/	
11. Have all Soil VOA Vials and Encores been placed in a freezer within 48 hours of collection?	/		
12. Were samples in direct contact with wet ice? If "No," check one: <input type="checkbox"/> NO ICE <input type="checkbox"/> BLUE ICE	/		
13. Was the cooler temperature less than 6°C?	/		
14. Where pH preservation is required, are sample pHs checked and any anomalies recorded by Sample control? Are all <2 or >10? Note: VOA samples are checked by laboratory analysts.	/		
15. Was sufficient sample volume provided to perform all tests?	/		
16. If for Bacteriological testing, were containers supplied by AEL? (See QA officer if answer is no)		/	
17. Were all sample containers provided by AEL? (Other than Bacteriological)	/		
18. Were samples accepted into the laboratory?	/		
19. When necessary to split samples into other bottles, is it noted in the comments?	/		

Comments: (Note all sample(s) and container (s)" with a "No" checklist response in this comment section)

Project No.: J1611270

Client Name: Waste Connections

ProjectID: J.E.D. Landfill

I. Receipt

II. Holding Times

Preparation:

Analysis:

III. Method

Analysis: SW-846 6010

Preparation: SW-846 3010A

IV. Preparation

V. Analysis

A. Calibration:

B. Blanks: The Method Blank (MB) contained low levels of Vanadium above the Method Detection Limit (MDL). In accordance with AEL QA, all sample results found in the Method Blank are flagged with a V qualifier to indicate the data is an estimate.

C. Duplicates:

D. Spikes:

E. Serial Dilution:

F. Samples:

G. Other:

I certify that this data package is in compliance with the terms and conditions agreed to by Advanced Environmental Laboratories, Inc. and by the client, both technically and for completeness, except for the conditions detailed above. The Quality Assurance Officer, or designee, as verified by the following signature, has authorized release of the data contained in this data package:

Project No.: J1611270

Client Name: Waste Connections

ProjectID: J.E.D. Landfill

I. Receipt

No Exceptions were encountered.

II. Holding Times

Preparation: All holding times were met.

Analysis: All holding times were met.

III. Method

Analysis: SW-846 8260B

Preparation: SW-846 5030B

IV. Preparation

Sample preparation proceeded normally.

V. Analysis

A. Calibration: All acceptance criteria were met.

B. Blanks: All acceptance criteria were met.

C. Surrogates:

D. Spikes: The spike recovery of PCE for the Laboratory Control Sample (LCS) was outside the upper control criterion. The analyte in question was not detected in the associated client samples. The error associated with elevated recovery equates to a high bias.

E. Internal Standard:

F. Samples: Sample analyses proceeded normally.

G. Other:

I certify that this data package is in compliance with the terms and conditions agreed to by Advanced Environmental Laboratories, Inc. and by the client, both technically and for completeness, except for the conditions detailed above. The Quality Assurance Officer, or designee, as verified by the following signature, has authorized release of the data contained in this data package:

Project No.: J1611270

Client Name: Waste Connections

ProjectID: J.E.D. Landfill

I. Receipt

No Exceptions were encountered.

II. Holding Times

Preparation: All holding times were met.

Analysis: All holding times were met.

III. Method

Analysis: SW-846 8260B (SIM)

Preparation: SW-846 5030B

IV. Preparation

Sample preparation proceeded normally.

V. Analysis

A. Calibration: All acceptance criteria were met.

B. Blanks: All acceptance criteria were met.

C. Surrogates: The control criteria were exceeded for surrogate 1,2-dichloroethane-d4 in the LCSD. The associated QC analysis recoveries of target compounds were in control, indicating the analysis was in control. The surrogate outliers were flagged accordingly.

D. Spikes: The matrix spike (MS) recoveries of EDB, DBCP for A1608292001 were outside control criteria. Recoveries in the Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were acceptable, which indicates the analytical batch was in control.

E. Internal Standard: All acceptance criteria were met.

F. Samples: Sample analyses proceeded normally.

G. Other:

I certify that this data package is in compliance with the terms and conditions agreed to by Advanced Environmental Laboratories, Inc. and by the client, both technically and for completeness, except for the conditions detailed above. The Quality Assurance Officer, or designee, as verified by the following signature, has authorized release of the data contained in this data package:

Project No.: J1611270

Client Name: Waste Connections

ProjectID: J.E.D. Landfill

I. Receipt

No Exceptions were encountered.

II. Holding Times

Preparation: All holding times were met.

Analysis: All holding times were met.

III. Method

Analysis: EPA 300.0

Preparation: None

IV. Preparation

Sample preparation proceeded normally.

V. Analysis

A. Calibration: All acceptance criteria were met.

B. Blanks: All acceptance criteria were met.

C. Duplicates:

D. Spikes: The relative percent difference (RPD) for the following analyte in the replicate laboratory control spike analyses was outside control criteria: Fluoride. All spike recoveries in the LCS, LCSD, and MS samples were within acceptable limits, indicating the analysis was in control.

E. Serial Dilution:

F. Samples: Sample analyses proceeded normally.

G. Other:

I certify that this data package is in compliance with the terms and conditions agreed to by Advanced Environmental Laboratories, Inc. and by the client, both technically and for completeness, except for the conditions detailed above. The Quality Assurance Officer, or designee, as verified by the following signature, has authorized release of the data contained in this data package:

Project No.: J1611270

Client Name: Waste Connections

ProjectID: J.E.D. Landfill

I. Receipt

No Exceptions were encountered.

II. Holding Times

Preparation: All holding times were met.

Analysis: Samples J1611276-005 and -006 were analyzed outside the recommended 48 hour hold time for unpreserved nitrate.
Preserved samples were analyzed by SM 4500NO3-F for total nitrate.
Results confirm nitrate values reported past hold time.

III. Method

Analysis: EPA 300.0

Preparation: None

IV. Preparation

Sample preparation proceeded normally.

V. Analysis

A. Calibration: All acceptance criteria were met.

B. Blanks: All acceptance criteria were met.

C. Duplicates: All acceptance criteria were met.

D. Spikes: The matrix spike recovery of Sulfate in J1611274001 was outside control criteria.
Recoveries in the Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were acceptable, which indicates the analytical batch was in control.

E. Serial Dilution:

F. Samples: Multiple samples in client project J1611276 were analyzed at the lowest possible dilution due to yellow color in the sample that could affect the instrument.

G. Other:

I certify that this data package is in compliance with the terms and conditions agreed to by Advanced Environmental Laboratories, Inc. and by the client, both technically and for completeness, except for the conditions detailed above. RE: Workorder: J1611175 J.E.D. Landfill

Dear Kirk Wills:

Enclosed are the analytical results for sample(s) received by the laboratory on Thursday, November 17, 2016. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report. The analytical results for the samples contained in this report were submitted for analysis as outlined by the Chain of Custody and results pertain only to these samples.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read 'Craig Myers'.

Craig Myers

Other Information:

Any discrepancies should be explained in the "Comments" section below.

CHECKLIST		YES	NO	NA
1. Were custody seals on shipping container(s) intact?				
2. Were custody papers properly included with samples?		/		
3. Were custody papers properly filled out (ink, signed, match labels)?		/		
4. Did all bottles arrive in good condition (unbroken)?		/		
5. Were all bottle labels complete (sample #, date, signed, analysis, preservatives)?		/		
6. Did the sample labels agree with the chain of custody?		/		
7. Were correct bottles used for the tests indicated?		/		
8. Were proper sample preservation techniques indicated on the label?		/		
9. Were samples received within holding times?		/		
10. Were all VOA vials free of the presence of air bubbles?		/		
11. Have all Soil VOA Vials and Encores been placed in a freezer within 48 hours of collection?				
12. Were samples in direct contact with wet ice? If "No," check one: <input type="checkbox"/> NO ICE <input type="checkbox"/> BLUE ICE		/		
13. Was the cooler temperature less than 6°C?		/		
14. Where pH preservation is required, are sample pHs checked and any anomalies recorded by Sample control? Are all <2 or >10? Note: VOA samples are checked by laboratory analysts.		/		
15. Was sufficient sample volume provided to perform all tests?		/		
16. If for Bacteriological testing, were containers supplied by AEL? (See QA officer if answer is no)				/
17. Were all sample containers provided by AEL? (Other than Bacteriological)		/		
18. Were samples accepted into the laboratory?		/		
19. When necessary to split samples into other bottles, is it noted in the comments?		/		

Comments: (Note all sample(s) and container (s)" with a "No" checklist response in this comment section)

Project No.: J1611175

Client Name: Waste Connections

ProjectID: J.E.D. Landfill

I. Receipt

Due to an inadvertent sample receiving error, samples J1611175003, J1611175004, J1611175005, and J1611175006 were logged in and provided to the laboratory without sufficient time remaining to perform the analysis within the recommended hold time. The analysis was performed as soon as possible after receipt by the laboratory. Since the analysis was not performed significantly past the hold time, it is our opinion that the impact on the data is minimal. The data is qualified to indicate the holding time violation.

II. Holding Times

Preparation:

Analysis:

III. Method

Analysis: EPA 300.0

Preparation: None

IV. Preparation

V. Analysis

A. Calibration:

B. Blanks:

C. Duplicates:

D. Spikes: The matrix spike (MS) recoveries of Chloride for sample J1611176001 were outside control criteria. Recoveries in the Laboratory Control Sample (LCS) were acceptable, which indicates the analytical batch was in control. No further corrective action was required.

RE: Workorder: J1611176 J.E.D. Landfill

Dear Kirk Wills:

Enclosed are the analytical results for sample(s) received by the laboratory on Thursday, November 17, 2016. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report. The analytical results for the samples contained in this report were submitted for analysis as outlined by the Chain of Custody and results pertain only to these samples.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read 'Craig Myers'.

ANALYTICAL RESULTS

Workorder: J1611176 J.E.D. Landfill

Lab ID: **J1611176006** Date Received: 11/17/16 08:30 Matrix: Water
Sample ID: **16321-MW-23B** Date Collected: 11/16/16 09:25

Sample Description: Location:

Parameters	Results	Qual	Units	DF	Adjusted PQL	Adjusted MDL	Analyzed	Lab
WET CHEMISTRY								
Analysis Desc: IC,E300.0,Water								Analytical Method: EPA 300.0
Chloride	220		mg/L	1	5.0	0.50	11/18/2016 12:27	J
Nitrate	0.13	I,Q	mg/L	1	0.50	0.050	11/18/2016 12:27	J
Analysis Desc: Ammonia,E350.1,Water								Analytical Method: EPA 350.1
Ammonia (N)	2.2		mg/L	5	0.05	0.04	11/22/2016 10:40	G
Analysis Desc: Tot Dissolved Solids,SM2540C								Analytical Method: SM 2540 C
Total Dissolved Solids	600		mg/L	1	10	10	11/22/2016 12:34	J

ANALYTICAL RESULTS QUALIFIERS

Workorder: J1611176 J.E.D. Landfill

PARAMETER QUALIFIERS

- U The compound was analyzed for but not detected.
- I The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- Q Missed Hold Time

LAB QUALIFIERS

- G DOH Certification #E82001(AEL-G)(FL NELAC Certification)
- J DOH Certification #E82574(AEL-JAX)(FL NELAC Certification)

Other Information:

Any discrepancies should be explained in the "Comments" section below.

CHECKLIST		YES	NO	NA
1. Were custody seals on shipping container(s) intact?				
2. Were custody papers properly included with samples?		/		
3. Were custody papers properly filled out (ink, signed, match labels)?		/		
4. Did all bottles arrive in good condition (unbroken)?		/		
5. Were all bottle labels complete (sample #, date, signed, analysis, preservatives)?		/		
6. Did the sample labels agree with the chain of custody?		/		
7. Were correct bottles used for the tests indicated?		/		
8. Were proper sample preservation techniques indicated on the label?		/		
9. Were samples received within holding times?		/		
10. Were all VOA vials free of the presence of air bubbles?		/		
11. Have all Soil VOA Vials and Encores been placed in a freezer within 48 hours of collection?				/
12. Were samples in direct contact with wet ice? If "No," check one: <input type="checkbox"/> NO ICE <input type="checkbox"/> BLUE ICE		/		
13. Was the cooler temperature less than 6°C?		/		
14. Where pH preservation is required, are sample pHs checked and any anomalies recorded by Sample control? Are all <2 or >10? Note: VOA samples are checked by laboratory analysts.		/		
15. Was sufficient sample volume provided to perform all tests?		/		
16. If for Bacteriological testing, were containers supplied by AEL? (See QA officer if answer is no)				/
17. Were all sample containers provided by AEL? (Other than Bacteriological)		/		
18. Were samples accepted into the laboratory?		/		
19. When necessary to split samples into other bottles, is it noted in the comments?		/		

Comments: (Note all sample(s) and container (s)" with a "No" checklist response in this comment section)

Project No.: J1611176

Client Name: Waste Connections

ProjectID: J.E.D. Landfill

I. Receipt

Due to an inadvertent sample receiving error, samples J1611176001 through J1611176006 were logged in and provided to the laboratory without sufficient time remaining to perform the analysis within the recommended hold time. The analysis was performed as soon as possible after receipt by the laboratory. Since the analysis was not performed significantly past the hold time, it is our opinion that the impact on the data is minimal. The data is qualified to indicate the holding time violation.

II. Holding Times

Preparation:

Analysis:

III. Method

Analysis: EPA 300.0

Preparation: None

IV. Preparation

V. Analysis

A. Calibration:

B. Blanks:

C. Duplicates:

D. Spikes: The matrix spike (MS) recoveries of Chloride for sample J1611176001 were outside control criteria. Recoveries in the Laboratory Control Sample (LCS) were acceptable, which indicates the analytical batch was in control. No further corrective action was required.

E. Serial Dilution:

RE: Workorder: J1611147 J.E.D. Landfill

Dear Kirk Wills:

Enclosed are the analytical results for sample(s) received by the laboratory on Wednesday, November 16, 2016. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report. The analytical results for the samples contained in this report were submitted for analysis as outlined by the Chain of Custody and results pertain only to these samples.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read 'Craig Myers'.

Craig Myers

ANALYTICAL RESULTS QUALIFIERS

Workorder: J1611147 J.E.D. Landfill

PARAMETER QUALIFIERS

- U The compound was analyzed for but not detected.
- I The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- Q Missed Hold Time
- J4 Estimated Result

LAB QUALIFIERS

- G DOH Certification #E82001(AEL-G)(FL NELAC Certification)
- J DOH Certification #E82574(AEL-JAX)(FL NELAC Certification)

Other Information:

Any discrepancies should be explained in the "Comments" section below.

CHECKLIST		
	YES	NO
1. Were custody seals on shipping container(s) intact?	/	/
2. Were custody papers properly included with samples?	/	/
3. Were custody papers properly filled out (ink, signed, match labels)?	/	/
4. Did all bottles arrive in good condition (unbroken)?	/	/
5. Were all bottle labels complete (sample #, date, signed, analysis, preservatives)?	/	/
6. Did the sample labels agree with the chain of custody?	/	/
7. Were correct bottles used for the tests indicated?	/	/
8. Were proper sample preservation techniques indicated on the label?	/	/
9. Were samples received within holding times?	/	/
10. Were all VOA vials free of the presence of air bubbles?	/	/
11. Have all Soil VOA Vials and Encores been placed in a freezer within 48 hours of collection?	/	/
12. Were samples in direct contact with wet ice? If "No," check one: <input type="checkbox"/> NO ICE <input type="checkbox"/> BLUE ICE	/	/
13. Was the cooler temperature less than 6°C?	/	/
14. Where pH preservation is required, are sample pHs checked and any anomalies recorded by Sample control? Are all <2 or >10? Note: VOA samples are checked by laboratory analysts.	/	/
15. Was sufficient sample volume provided to perform all tests?	/	/
16. If for Bacteriological testing, were containers supplied by AEL? (See QA officer if answer is no)	/	/
17. Were all sample containers provided by AEL? (Other than Bacteriological)	/	/
18. Were samples accepted into the laboratory?	/	/
19. When necessary to split samples into other bottles, is it noted in the comments?	/	

Comments: (Note all sample(s) and container (s)" with a "No" checklist response in this comment section)

I. RECEIPT

Due to an inadvertent sample receiving error, samples J16111470001 and J1611147002 were logged in and provided to the laboratory without sufficient time remaining to perform the analysis within the recommended hold time. The analysis was performed as soon as possible after receipt by the laboratory. Since the analysis was not performed significantly past the hold time, it is our opinion that the impact on the data is minimal.
The data is qualified to indicate the holding time violation.

II. HOLDING TIMES

Preparation: All holding times were met.

Analysis: All holding times were met.

III. PREPARATION

Sample preparation proceeded normally.

VI. ANALYSIS

A. Calibration: All acceptance criteria were met.

B. Blanks: All acceptance criteria were met.

C. Duplicates: All acceptance criteria were met.

D. Spikes: All acceptance criteria were met.

E. Serial Dilution: All acceptance criteria were met.

F. Samples: Samples J1611147002, 005 and 008 were analyzed at the lowest possible dilution due to the dark color in the samples that could affect the instrument.

G. Other:

I certify that this data package is in compliance with the terms and conditions agreed to by Advanced Environmental Laboratories, Inc. and by the client, both technically and for completeness, except for the conditions detailed above. The Technical Director or his designee, as verified by the following signature, has authorized release of the data contained in this hard copy data package and in the computer-readable data submitted on diskette:

RE: Workorder: A1608292 J.E.D. Landfill

Dear Kirk Wills:

Enclosed are the analytical results for sample(s) received by the laboratory on Friday, November 18, 2016. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report. The analytical results for the samples contained in this report were submitted for analysis as outlined by the Chain of Custody and results pertain only to these samples.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read 'Craig Myers'.

Craig Myers

QUALITY CONTROL DATA QUALIFIERS

Workorder: A1608292 J.E.D. Landfill

QUALITY CONTROL PARAMETER QUALIFIERS

- U The compound was analyzed for but not detected.
- I The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- J1 Surrogate Failure
- J3 Lab QC Failure
- V Method Blank Contamination

FOR DRINKING WATER USE:

(When PWS information not otherwise supplied) **PWS ID:** _____

Contact Person: _____ Phone: _____

Supplier of Water: _____

Site-Address: _____

Project No.: A1608292

Client Name: Waste Connections

ProjectID: J.E.D. Landfill

I. Receipt

II. Holding Times

Preparation:

Analysis:

III. Method

Analysis: SW-846 6010

Preparation: SW-846 3010A

IV. Preparation

V. Analysis

A. Calibration:

B. Blanks: The Method Blank (MB) contained low levels of Vanadium above the Method Detection Limit (MDL). In accordance with AEL QA, all sample results found in the Method Blank are flagged with a V qualifier to indicate the data is an estimate.

C. Duplicates:

D. Spikes:

E. Serial Dilution:

F. Samples:

G. Other:

I certify that this data package is in compliance with the terms and conditions agreed to by Advanced Environmental Laboratories, Inc. and by the client, both technically and for completeness, except for the conditions detailed above. The Quality Assurance Officer, or designee, as verified by the following signature, has authorized release of the data contained in this data package:

Project No.: A1608292

Client Name: Waste Connections

ProjectID: J.E.D. Landfill

I. Receipt

No Exceptions were encountered.

II. Holding Times

Preparation: All holding times were met.

Analysis: All holding times were met.

III. Method

Analysis: SW-846 8260B

Preparation: SW-846 5030B

IV. Preparation

Sample preparation proceeded normally.

V. Analysis

A. Calibration: All acceptance criteria were met.

B. Blanks: All acceptance criteria were met.

C. Surrogates:

D. Spikes: The spike recovery of PCE for the Laboratory Control Sample (LCS) was outside the upper control criterion. The analyte in question was not detected in the associated client samples. The error associated with elevated recovery equates to a high bias. The sample data is not significantly affected. No further corrective action was required.

E. Internal Standard:

F. Samples: Sample analyses proceeded normally.

G. Other:

I certify that this data package is in compliance with the terms and conditions agreed to by Advanced Environmental Laboratories, Inc. and by the client, both technically and for completeness, except for the conditions detailed above. The Quality Assurance Officer, or designee, as verified by the following signature, has authorized release of the data contained in this data package:

Project No.: A1608292

Client Name: Waste Connections

ProjectID: J.E.D. Landfill

I. Receipt

No Exceptions were encountered.

II. Holding Times

Preparation: All holding times were met.

Analysis: All holding times were met.

III. Method

Analysis: SW-846 8260B (SIM)

Preparation: SW-846 5030B

IV. Preparation

Sample preparation proceeded normally.

V. Analysis

A. Calibration: All acceptance criteria were met.

B. Blanks: All acceptance criteria were met.

C. Surrogates: The control criteria were exceeded for surrogate 1,2-dichloroethane-d4 in the LCSD. The associated QC analysis recoveries of target compounds were in control, indicating the analysis was in control. The surrogate outliers were flagged accordingly. No further corrective action was required.

The control criterion was exceeded for the following surrogate in the matrix spike (MS) pertaining to A1608292001 due to matrix interferences: 1,2-dichloroethane-d4. The affected surrogate is qualified accordingly.

The control criterion was exceeded for the following surrogates in several samples due to matrix interference: 1,2-dichloroethane-d4, toluene-d8, bromofluorobenzene. The error associated with an elevated recovery equates to a high bias. The quality of the sample data is not significantly affected, as internal recoveries were within acceptance criteria of the ICAL and are consistent with quality control samples. No further corrective action was required.

D. Spikes: The matrix spike (MS) recoveries of EDB, DBCP for A1608292001 were outside control criteria. Recoveries in the Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were acceptable, which indicates the analytical batch was in control. The matrix spike outlier suggests a potential low bias in this matrix. The affected sample is qualified to indicate matrix interference.

I certify that this data package is in compliance with the terms and conditions agreed to by Advanced Environmental Laboratories, Inc. and by the client, both technically and for completeness, except for the conditions detailed above.
