Subject: Southeast County Landfill OGC File No. 17-0058 - Liquid Assessment Monitoring Monthly Progress Report for January 2019

Dear Mr. Tafuni,

On behalf of Hillsborough County Transportation & Utility Services, Solid Waste Management Division, SCS Engineers is submitting the attached PDF of the January 2019 monthly progress report for the liquid assessment monitoring and dewatering activities completed at the Southeast County Landfill. This update is being submitted as a requirement of condition 9.(f) of the July 28, 2017 Consent Agreement between the State of Florida Department of Environmental Protection and Hillsborough County.

Please contact Ken Guilbeault (813-804-6716) or Kollan Spradlin (813-804-6706) if you have any questions or require additional information.

Thank you,

Kollan

1 INTRODUCTION

On behalf of Hillsborough County Transportation & Utilities Services, Solid Waste Management Division (SWMD), SCS Engineers (SCS) is submitting this report to present the January 2019 monthly progress for the liquid assessment monitoring and dewatering activities completed at the Southeast County Landfill (SCLF) located in Lithia, Florida. This update is being submitted as a requirement of condition 9.(f) of the July 28, 2017, Consent Agreement between the State of Florida Department of Environmental Protection (FDEP) and Hillsborough County, Florida (the County). Condition 9.(f) states that the County shall submit a monthly progress report that, "shall include the preceding monthly leachate generation rates and weekly piezometers readings for the site."

Progress reports have been submitted monthly since July 2017. The following sections update and summarize data collected and actions initiated for the month of January 2019. Leachate pumpage data, piezometer readings, and dewatering activities are addressed below.

2 LEACHATE PUMPAGE DATA

Historically, a pump at permanent Pump Station B (PS-B) has removed leachate from Phases I-VI. As part of the on-going supplemental leachate removal at the SCLF, the SWMD has been pumping from additional locations. The supplemental pump locations are shown in **Figure 1**.

2.1 SUPPLEMENTAL DEWATERING LOCATIONS

2.1.1 Landfill Gas Extraction Well Network Phases I – VI

The SWMD has installed pneumatic pumps in existing Landfill Gas (LFG) Extraction Wells (EW) and Condensate Traps (CT) in the Phase I and II areas. Pumps were installed in four LFG EWs (EW-38, EW-44, EW-48, and EW-66) and three CTs (CT-1, CT-2, and CT-3). Air supply lines to operate the pumps and discharge lines were connected to the existing LFG system.

2.1.2 Pump Station 2

Following the installation of the cut-off trench along the eastern and southern sides of Phase II, a suction line connected to a pump was installed in the cleanout of the header pipe. Pump Station 2 (PS-2) has a vacuum assisted diesel pump located at the eastern edge of Phase II and removes leachate from Cleanout 2-1. PS-2 pumps leachate from the Phase II header to the Main Leachate Pump Station (MLPS). Pumpage data for PS-2 is included in **Appendix A**.

The SWMD previously operated two additional pumping locations in Phase II of the SCLF that have since been removed due to insufficient liquid quantities at these locations. Temporary Pump Station 2 operated from February 2017 through August 2017. Temporary Pump Station 2B operated from August 2017 through December 2017. **Appendix A** includes the historical pumping data from these two pump locations.

2.1.3 Dewatering Wells

In May 2017, two leachate dewatering wells, with two pumps each, were installed in Phases I and II. The wells extend through the waste and drainage sand to the top of clay. The dewatering wells in Phase I are referred to as DW 1-1 and DW 1-2. The dewatering wells in Phase II are referred to as DW 2-1 and DW 2-2. A set of pneumatic pumps were installed in each of these wells in order to pump leachate from the lower waste and drainage sand layer, thus removing leachate at the lowest elevation possible.

2.1.4 Evaluation of Alternate Pumping Locations

During January 2019, the SWMD continued the alternate pumping location study. From December 31, 2018, to January 11, 2019, the SWMD stopped pumping from header pipes to evaluate the PS-B leachate removal rate without supplemental pumping from the header pipes. The temporary pump station recommenced pumping at CO 2-1 on January 12, 2019. An evaluation of the alternate pumping locations will be submitted upon review of the supplemental pumping location data.

2.2 SUPPLEMENTAL LEACHATE PUMPAGE DATA

As part of the on-going investigation of liquid, the SWMD collects pumping data from each of the supplemental dewatering locations described above. **Table 1** summarizes the monthly pumping totals for January 2019. The daily leachate pumpage data through the end of January 2019 is provided in **Appendix A**.

Table 1. Summary of January 2019 Supplemental Pumping Data

Pump	Phase	Days Operation*	Monthly Total (Gallons)	Increase or Decrease in Monthly Total from Previous Month	Daily Avg (GPD)
CT-1	II	30	18,171	↓	606
CT-2	I	31	5,472	↓	177
CT-3	I	0	-	-	-
EW-38	II	0	-	-	-
EW-44	I	31	11,536	↑	372
EW-48	I	21	3,296	↑	157
EW-66	II	0	17	-	-
DW 1-1	I	31	84,643	↑	2,730
DW 1-2	I	31	44,237	↑	1,427
DW 2-1	II	31	30,063	↑	970
DW 2-2	II	14	352	↑	25
PS-2 (CO 2-1)	II	20	645,569	-	32,279
		January Total	**843,356**		**27,205**

*EW-66 pumped a small volume during the month of January, however it did not pump more than 10 gallons on any day. For the purposes of this evaluation, a pump is only considered "operational" if it pumps over 10 gallons in one day.

2.3 SUPPLEMENTAL LEACHATE PUMPAGE DATA OBSERVATIONS FOR JANUARY 2019

- A total of approximately 843,356 gallons was removed from the Phase I, II, and III areas from supplemental pumping in January 2019. The average daily supplemental withdrawal was approximately 27,205 gallons per day (GPD), based on 31 days.
- During January 2019, the total pumping increased by approximately 429,499 gallons compared to December 2018.
- The pneumatic pumps installed in LFG extraction wells EW-44, EW-48, and condensate traps CT-1 and CT-2 removed approximately 1,241 (avg.) GPD combined in January 2019.
- CT-3 was dry during the month of January.
- LFG extraction wells EW-38 and EW-66 were dry during January 2019. EW-38 has not pumped since September 2017 and EW-66 has not pumped since November 2018.
- DW 1-1, DW 1-2, and DW 2-1 each pumped for 31 days and averaged 2,730 GPD, 1,427 GPD, and 970 GPD, respectively, during the month of January.
- DW 2-2 pumped for 14 days and averaged 25 GPD during the month of January.
- PS-2 pumped a total of 645,569 gallons over 31 days in January, or an average of 32,279 GPD.

3 PIEZOMETER READINGS

As part of the on-going investigation of liquid, the SWMD measures piezometer water levels once a week. Piezometers are differentiated by two construction types, Series-1 and Series-2. The Series-1 piezometers are screened in the drainage sand and waste. The Series-2 piezometers are screened in the drainage sand layer only. Locations of the current monitoring points are shown in **Figure 2**.

Additionally, daily precipitation data is collected from multiple rain gauges across the site and averaged for a daily rainfall total that is then presented as cumulative weekly rainfall. Weekly water level and precipitation data collected through the end of January is presented in **Appendix B**. Daily precipitation data is available in the water balance report in **Appendix C.**

3.1 SERIES-1 PIEZOMETER AND PRECIPITATION DATA OBSERVATIONS FOR JANUARY 2019

Three Series-1 piezometers, SB-29, SB-30, and SB-32, remain functional. SB-29 showed an increase in liquid levels compared to December 2018. SB-30 and SB-32 remained steady during the month of January.

An average of 3.49 inches of rain was recorded at the on-site rain gauges in January.

3.2 RESPONSE OF SERIES-2 PIEZOMETERS

During January, most liquid levels in the Series-2 piezometers showed a decrease in liquid levels compared to December 2018. At most locations the liquid levels in the Series-2 piezometers during January 2019 are comparable to or higher than levels in January 2018.

A review of historical trends shows a declining trend in liquid levels in most Series-2 piezometers from October 2017 to May 2018. The liquid levels were steady in May and June 2018, slowly increasing in July and August 2018, steady from September to December 2018, and beginning to decrease in January 2019 (**Appendix B**).

3.3 PHASE II CUT-OFF TRENCH

Monitoring and dewatering of the cut-off trench continued through January 2019. The liquid levels in monitoring points MP 2-2 and MP 2-3 remained below or near two feet during January 2019. Liquid in the cut-off trench flows to the Phase II header.

4 LIQUID REMOVAL ACTIVITIES

The SWMD has been following the activities outlined in the Corrective Action Plan (CAP) submitted to the FDEP on June 26, 2017. The SWMD submitted a revised CAP to the FDEP on July 16, 2018. Upon acceptance of the final submittal by the FDEP, the SWMD will begin to implement any changes in activities per the revised CAP.

5 WATER BALANCE

Per the Consent Agreement, the SWMD has been submitting monthly water balance reports to the FDEP prior to the 15th of each month. These reports contain leachate pumpage and storage data at the SCLF. A copy of the January 2019 Water Balance letter is presented in **Appendix C**.

6 WATER QUALITY

6.1 QUARTERLY SAMPLING AND ANALYSIS

Per Condition 10 of the Consent Agreement, the SWMD continued supplemental quarterly evaluation monitoring of select groundwater monitoring wells. Laboratory analytical results of the August 2017, November 2017, and February 2018 sampling events show improving water quality at TH-67, TH-79, and TH-83. The May 2018 sampling event showed some fluctuation in concentrations, likely due to low rainfall during this period causing a lowered surficial aquifer.

Seasonal fluctuations of the surficial aquifer have occurred in the past and the water quality is expected to improve as the seasonal level of the surficial aquifer rises. The August 2018 sampling event showed improved groundwater quality, with concentrations of parameters (sodium, ammonia, chloride, and TDS) below the primary and secondary drinking water standards.

The November 2018 groundwater sampling event was conducted on November 8 and 9, 2018. The results of the sampling event show a slight fluctuation in most parameters compared to the August 2018 sampling event, however, the parameters remain below the primary and secondary drinking water standards (with the exception of pH which is attributed to natural background conditions). **Appendix D** shows groundwater trends for conductivity, TDS, chloride, sodium, and ammonia dating back to August 2015. The constituents demonstrate seasonal fluctuations (caused by water table fluctuations), however, overall water quality continues to demonstrate improvements since the corrective actions were implemented in early 2017 and the parameters remain below the primary and secondary drinking water standards (with the exception of pH which is attributed to natural background conditions).

The next groundwater sampling event is scheduled for February 2019. The laboratory analytical results will be provided to the FDEP within 60 days of the receipt of the laboratory results.

7 BIOSOLIDS COMPOSTING AREA SUMP SURVEY

On January 4, 2019, a staff gauge was installed at the Biosolids Composting Area Sump in accordance with answer number three (3) of the response to the Department's Minor Modification Request for Additional Information dated October 29, 2018, and September 5, 2018, respectively. The survey of the staff gauge is included in **Appendix E**. According to the survey, the maintenance level elevation of 199.0 ft NAD1929 corresponds to a liquid depth of 2.40 feet at the staff gauge.

8 JET CLEANING OF LEACHATE COLLECTION PIPES

From January 7 to January 9, 2019, Florida Jetclean of Odessa, Florida cleaned the leachate collection pipes in Phases I-VI with a high pressure jet nozzle. A report from Florida Jetclean with jetting lengths for each cleanout is included in Appendix F.

9 PLANNED ACTIVITES

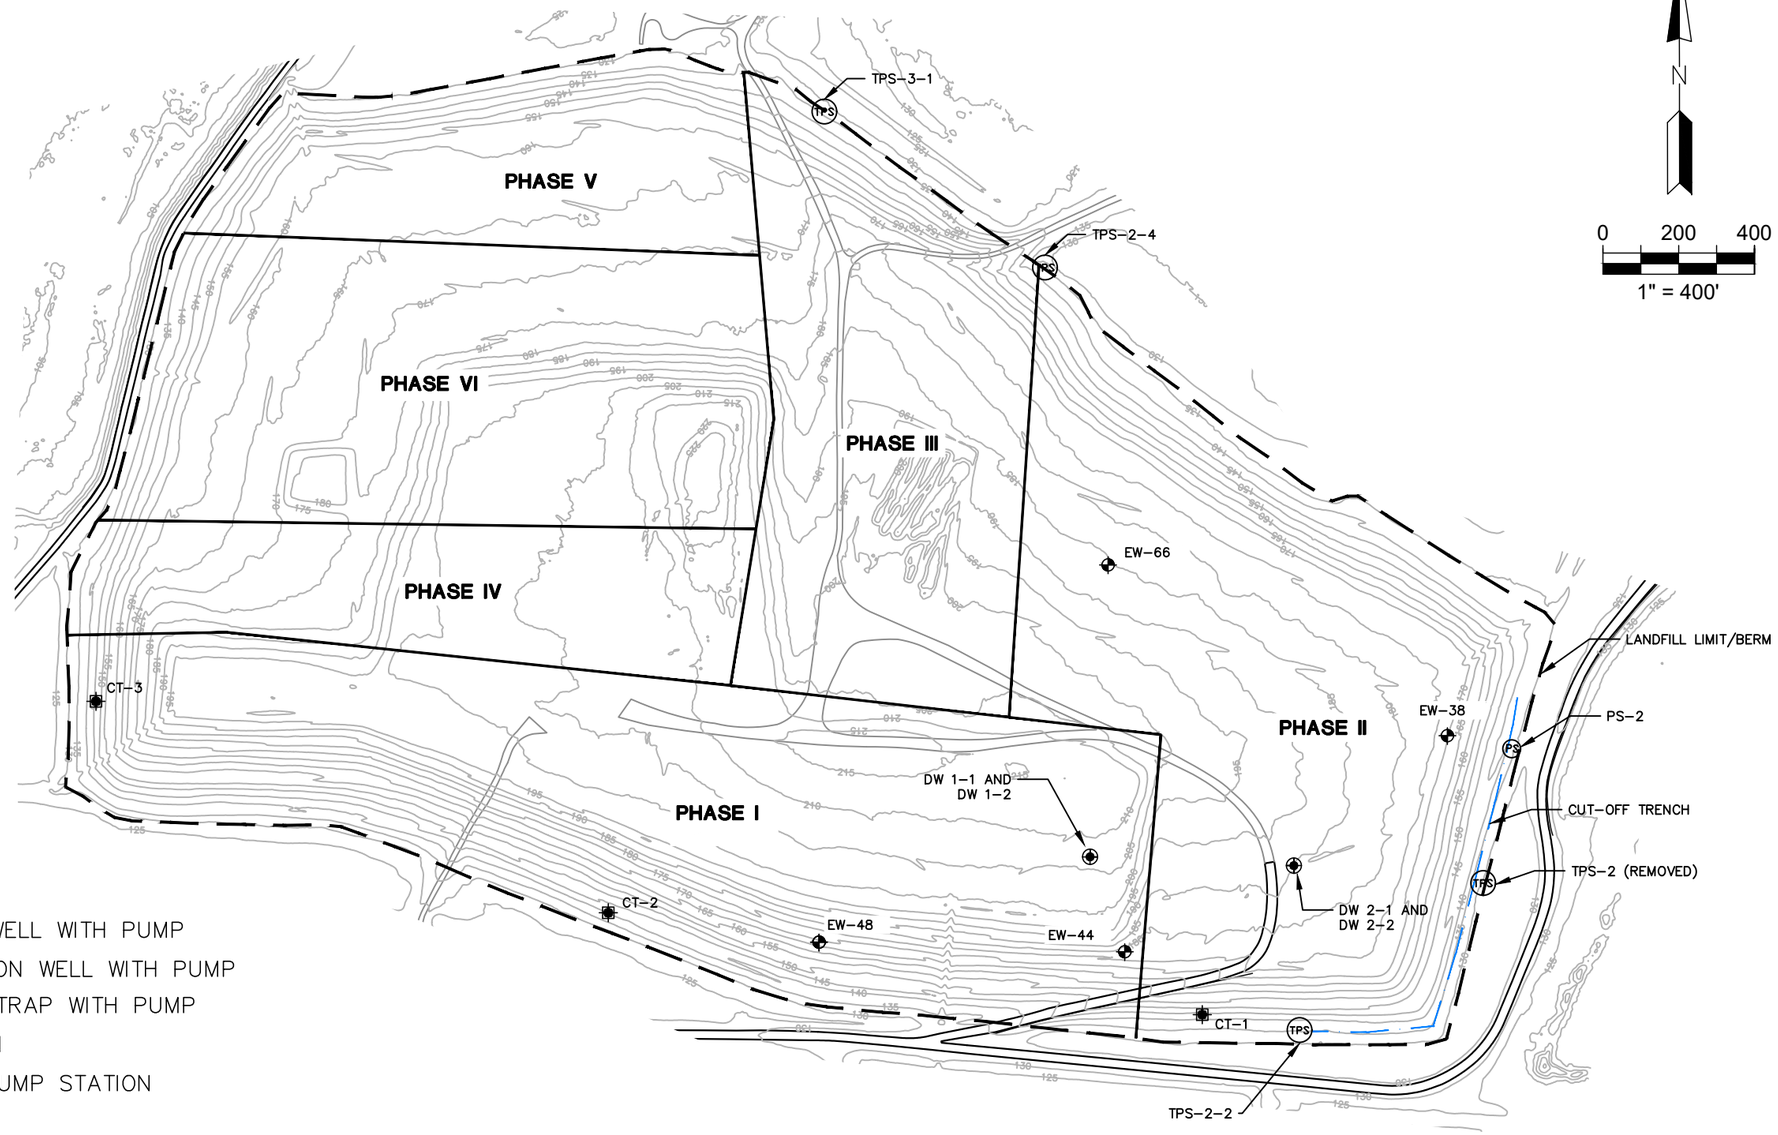

9.1 INSTALLATION OF CUT-OFF TRENCH EXTENSION

As discussed in an email from the SWMD to the FDEP dated January 8, 2019, the SWMD plans to install a continuation of the existing Phase II cut-off trench in April of 2019. The trench will be located on the southern edge of Phase II and will extend to the Phase I/Phase II boundary. The design of the new trench will be similar to the design of the existing trench, however, the new trench will be located closer to the outer edge of the landfill.

10 CONCLUSIONS

The SWMD continues to conduct liquid level measurement and dewatering activities in an effort to gain a more comprehensive understanding of the leachate movement within the landfill and to expedite dewatering in Phases I and II. Based on the University of Florida report, the liquid levels in Series-2 piezometers are not reliable indicators for head over liner. However, the SWMD will continue to collect piezometer measurements in accordance with the consent agreement. The SWMD will also continue to pump supplemental locations and monitor leachate pumping rates.

1/25/2019	4,145	3,565	37,225	237,384	282,319	40,331
Total	2,638,164	1,813,473	689,341	9,278,416	14,419,394	

Notes

1. Installed suction line in Phase II header.
2. Pumps shut down during and following Hurricane Irma.
3. Dewatering wells shut down for maintenance 10/12/17 through 10/26/17.
4. PS-2 shut down for construction at cut-off trench from 11/27/17 through 12/28/17.
5. PS-2B shut down for construction at cut-off trench from 12/7/17 through 12/11/17.
6. PS-2B shut down to check liquid Levels in MP 2-2 and MP 2-3 from 12/28/17 through 1/5/18.
7. All supplemental dewatering pumps shut down for Phase II dye tracer test 1/9/18 and 1/10/18.
8. PS-2 shut down for maintenance 1/16, 1/19, 1/20, 1/24, and 1/25.

		1/25/2019	19.0		123.3		0.9	0.9

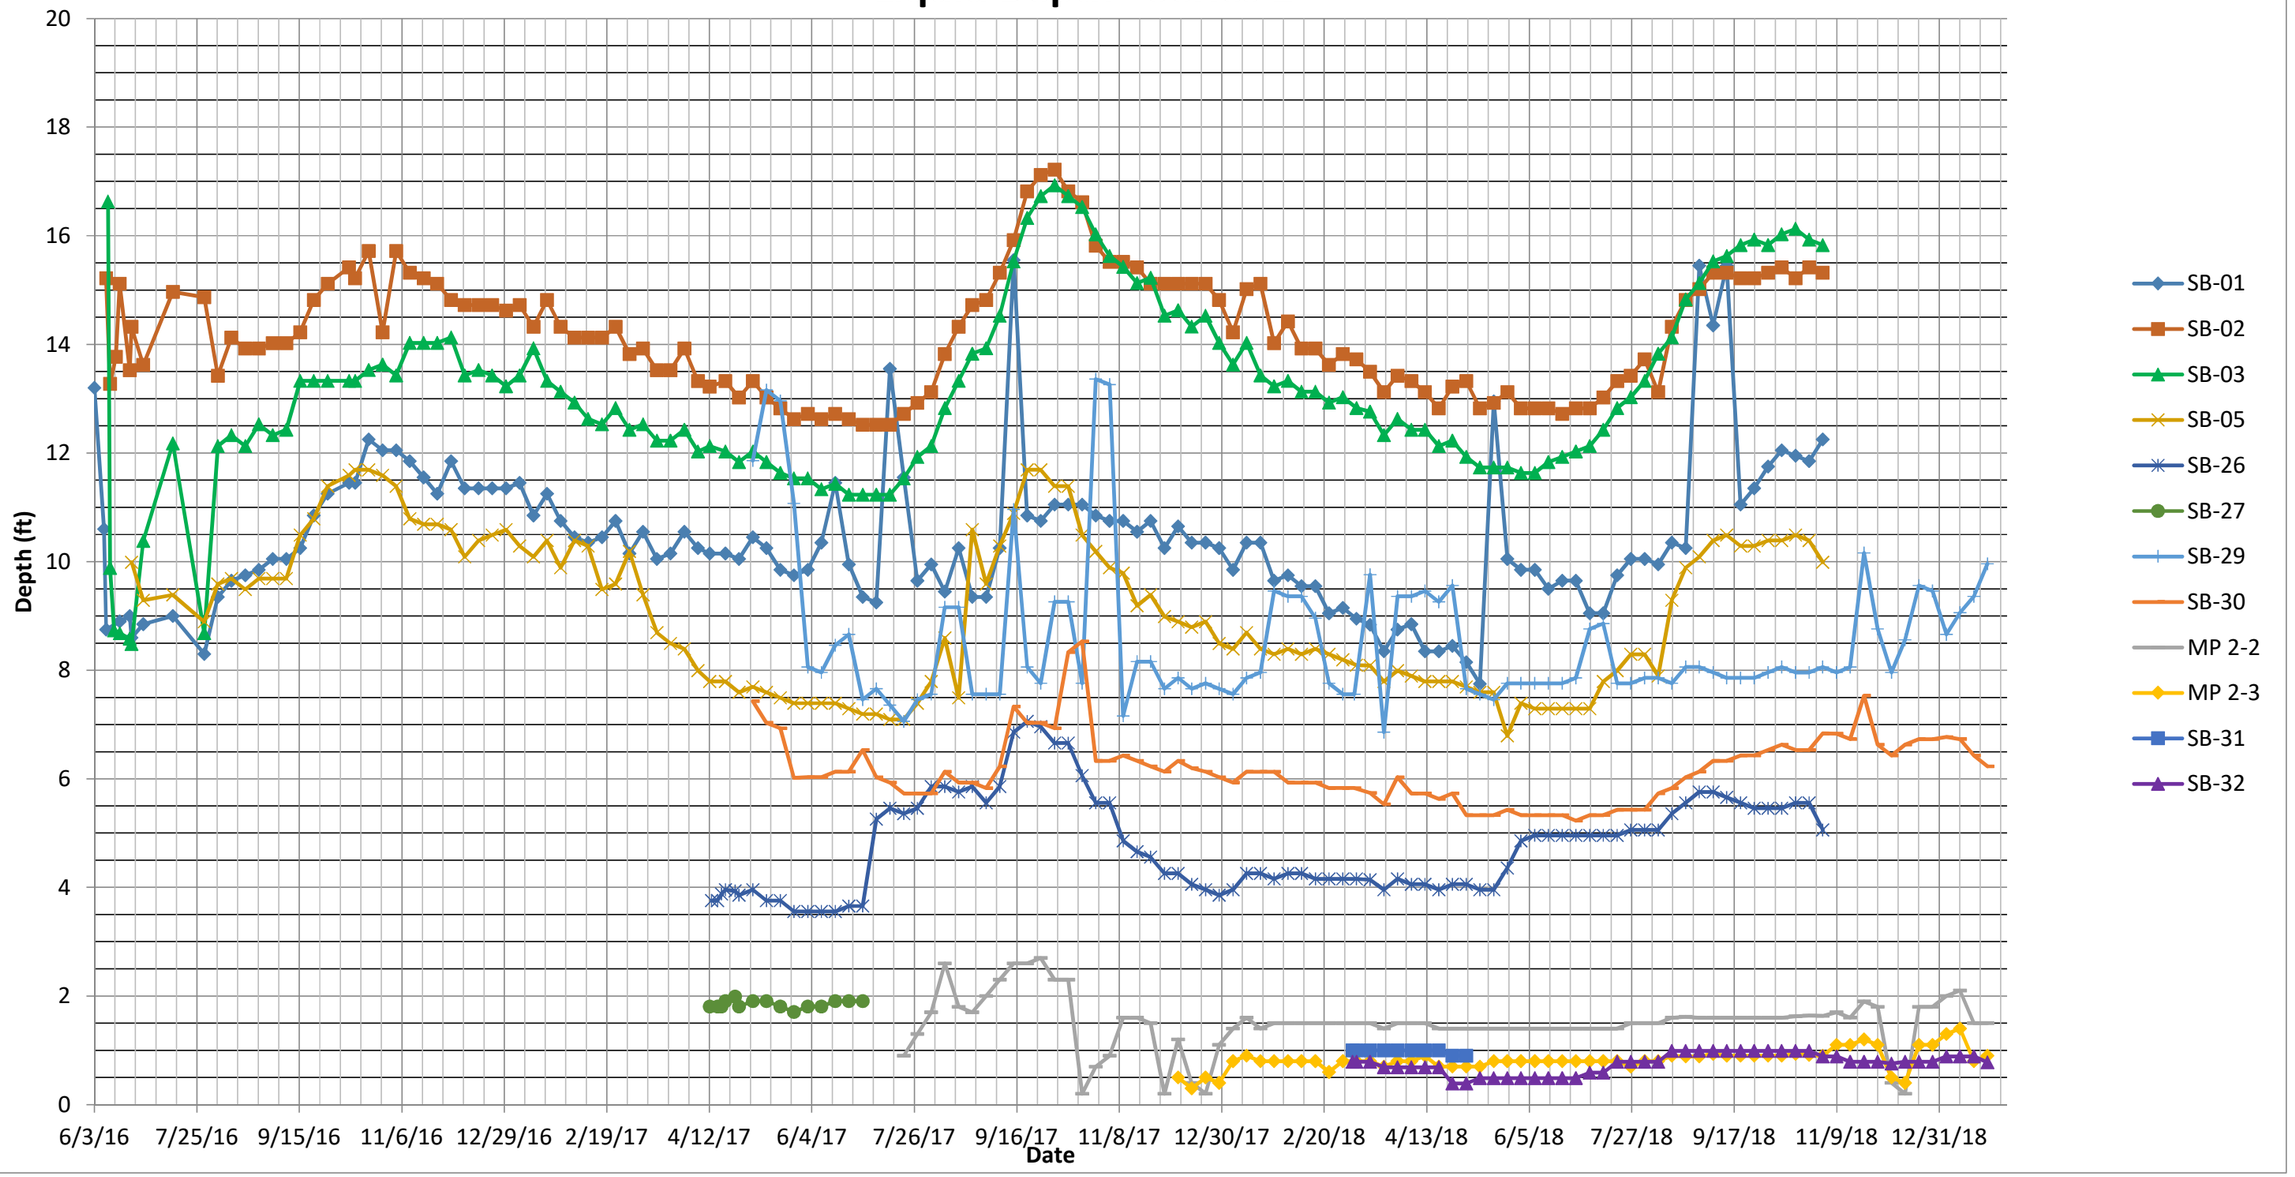

Notes:

1. Water levels collected in SB-15 through SB-23D on 2/16/17 are prior to development.
2. Approximate elevations based on raw survey data.
3. Extended riser at SB-25D due to waste filling operations.
4. Lowered riser at SB-25D in order to conduct pump test.
5. Removed SB-27 during construction of cut-off trench the week of 7-10-2017. Replaced with MP-1 and MP-2.
6. Monitoring Points MP 2-2 and MP 2-3 are vertical HDPE risers installed in cutoff trench.
7. Installed pump at CO 2-2 on 8/11/2017. MP 2-2 may be affected by pumping.
8. Clay elevation at MP 2-3 is estimated based on bottom of trench survey points north and south of riser.
9. SB-25D appeared to be blocked on 9/1/2017. Investigations were conducted with an excavation that determined the piezometer is broken at 14' B.G.
10. Actively filling in the Phase IV area. SWMD extended risers at SB-23D and SB-23S.
11. Actively filling in the Phase IV and VI area. SWMD extended riser at SB-21D.
12. Construction activity at CO 2-1 on 12/1 adjusting depth of MP 2-3.
13. Pump at CO 2-2 turned off to evaluate effects of construction activity at cut-off trench.
14. SB-31 and SB-32 installed temporarily to monitor liquid level prior to excavation to determine accuracy of piezometers. Top of casing based on ground survey and measurement of stickup.
15. SB-23S was damaged after 2/2/2018 and staff has not been able to conduct liquid level measurements.
16. Slug tests on Series-2 piezometers. Levels may be artificially high. Water added on 3/28/18.
17. Extended riser at SB-22D due to waste filling operations. Added 10' on 4/22/18 and 8' on 5/11/2018.
18. SB-22D destroyed during waste filling operations in Phase VI.
19. SWMD excavated trench near SB-32 from 4/24/2018 - 4/30/2018 in order to locate Phase III header pipe and installl cleanout riser.
20. SWMD excavated trench near SB-31 from 5/7/2018 - 5/15/2018 in order to locate Phase II header pipe and installl cleanout riser. SB-31 removed on 5/11/2018.
21. Damage to SB-28D riser. Removed broken piece ~ 1.59'. Modified piezometer prior to 6/15/18.
22. PVC pipe at SB-23D sheared by landfill prior to 9/21/18 reading.
23. SB-01, 02, 03, 05, 26, P-19S, 23S and 23D were all abandoned prior to 11/9/18.
24. Power failure - DW-1 and DW-2 not pumping - allowed liquid level to increase in SB-29 and SB-30.

MEMORANDUM

DATE: February 14, 2019

TO: Larry E. Ruiz, Manager Landfill Operations, Solid Waste Management Division

FROM: Ron W. Wiesman, Sr. Supervisor, Solid Waste Management Division

SUBJECT: Leachate Water Balance Report Forms for January 2019
Southeast County Landfill, Hillsborough County, Florida

The Solid Waste Management Division (SWMD) staff has compiled and reviewed the leachate management operational data from the Southeast County Landfill Phases I-VI, Sections 7-8, and Section 9. Attached are the Leachate Water Balance Report Form (Table 1), the Leachate Field Data Entry Form (Table 2), and the 2019 Summary (Table 3). Also, attached find Figure 1 showing leachate levels in Pump Station B sump of Phases I-VI and rainfall for the month.

TABLE 1

Day (Column I)

Column I presents the calendar days for the month.

Rainfall (Column II)

Column II presents the average rainfall, in inches, as measured in the field from rainfall stations at the site. This month there was 3.49 inches of rainfall recorded at the Southeast County Landfill (SCLF).

Depth in Pond A (Column III)

Column III presents the daily depth, in feet, of effluent stored in effluent pond (Pond A). The daily depth in Pond A varies as a function of the spray irrigation frequency/duration and effluent hauled from the pond. This month there was no effluent stored in Pond A, however small amounts of rain water collected in the pond.

Depth in Pond B (Column IV)

Column IV presents the daily depth, in feet, of effluent or leachate that is stored in the effluent/leachate storage pond (Pond B). The depth in Pond B varies as a function of the evaporation frequency/duration and effluent or leachate hauled from the pond. This month the daily average depth of leachate in Pond B was 0.3 feet.

Estimated Depth at Pump Station B Sump (PS-B) (Column V)

Column V presents the depth of leachate, in inches, in the PS-B sump. Leachate from Phases I-VI flows to the PS-B sump for removal from the landfill. PS-B then pumps the leachate to Pump Station A (PS-A). Daily depth readings from the PS-B sump are included in this column. The average recorded depth of leachate in the PS-B sump was 15.4 inches.

Leachate Pumped to MLPS from Phases I-VI (Column VI)

Column VI presents the daily amount of leachate, in gallons, collected from PS-A and pumped through the MLPS to the 575,000-gallon storage tank at the Leachate Treatment and Reclamation Facility (LTRF) for treatment or disposal. This column also includes the Phase II data from the dewatering wells and PS-2. The average daily amount of leachate pumped from PS-A was 110,973 gallons. A total of 3,440,156 gallons of leachate was pumped this month.

Leachate Pumped from Sections 7-8 LDS (Column VII)

Column VII presents the quantity of leachate removed from the leak detection system (LDS) of Sections 7-8. The quantity is measured by a flow meter before being pumped for removal with Sections 7-8 leachate. The removal rate did not exceed 1,930 gallons per day. This month 3,242 gallons of leachate was removed from the leak detection system of Sections 7-8.

Leachate Pumped to MLPS from Sections 7-8 (Column VIII)

Column VIII presents the quantity of leachate collected at Sections 7-8 and pumped to the MLPS. The quantity is measured by a flow meter and includes any leachate removed from the leak detection system of Sections 7-8 (Column VII). This month a total of 300,356 gallons was removed.

Leachate Pumped to LTRF from the MLPS (Column IX)

Column IX presents the total quantity of leachate pumped to the LTRF from Phases I-VI (including condensate removed from LFG Wells and Condensate Traps), and Sections 7-8. This month a total of 3,740,512 gallons of leachate was pumped to the LTRF.

Leachate Pumped to LTRF from Section 9 (Column X)

Column X presents the daily amount of leachate, in gallons, collected from Section 9 and pumped to the 575,000-gallon storage tank at the Leachate Treatment and Reclamation Facility (LTRF) for treatment or disposal. A total of 183,458 gallons of leachate was pumped this month.

Leachate Pumped from Section 9 LDS (Column XI)

Column XI presents the daily amount of leachate, in gallons, collected from the LDS of Section 9 and pumped to the 575,000-gallon storage tank at the LTRF for treatment or disposal. The removal rate did not exceed 4,651 gallons per day. This month 280 gallons of leachate was removed from the leak detection system.

Leachate Pumped from Compost Area Sump (Column XII)

Column XII presents the total quantity of leachate pumped to the LTRF and Pond B from the Compost Project Area Sump. This month 86,476 gallons of leachate was removed from the compost area and pumped to the LTRF.

Leachate in 575,000-Gallon Tank (Column XIII)

Column XIII presents the daily amount of leachate, in gallons, stored in the 575,000-gallon leachate holding tank T1 at the LTRF. The amount of leachate stored in T1 is calculated based on the circumference of the tank and the daily level reading. This month leachate was not stored in the tank.

Effluent in 575,000-Gallon Tank (Column XIV)

Column XIV typically presents the daily amount of effluent, in gallons, stored in the 575,000-gallon effluent holding tank T6 at the LTRF. The SWMD began storing leachate in this tank in June 2018. The amount of effluent/leachate stored in T6 is calculated based on the circumference of the tank and the daily level reading. This month an average of 421,800 gallons of leachate was stored in the tank.

Leachate Treated at LTRF (Column XV)

Column XV presents the daily amount of leachate, in gallons, treated at the LTRF. On August 16, 2016, plant staff began shutting down operations for upcoming permit required tank inspections. This month leachate was not treated at the plant.

Total Leachate Hauled (Column XVI)

Column XVI presents the daily amount of leachate, in gallons, hauled off site. This month a total of 3,729,332 gallons of leachate was hauled off site.

Leachate Dust Control Sprayed (Column XVII)

Column XVII presents the daily amount of leachate, in gallons, measured from the flow meter at the bypass-loading arm at the leachate storage tank. The leachate is used for dust control in the active area of the landfill. This month leachate was not used for dust control.

Pond A Storage (Column XVIII)

Column XVIII presents the daily amount of effluent, in gallons, stored in Pond A. The daily amount stored in the pond is calculated by using the daily depth of effluent in the Pond A (Column III). Under normal operating conditions, the daily amount of effluent stored in the pond varies depending upon the daily amount of leachate treated at the LTRF, the daily rainfall, daily effluent hauling operations, daily spray irrigation operations, and the daily amount of effluent used for dust control/evaporation. This month effluent was not stored in Pond A however rainwater collected in Pond A after a couple large storm events.

Pond B Storage (Column XIX)

Column XIX presents the daily amount of effluent, in gallons, stored in Pond B. The daily amount stored in the pond is calculated by using the daily depth of liquid in Pond B (Column IV). Under normal operating conditions, the amount stored in the pond will vary depending upon the daily amount of leachate/effluent removed from the pond by the evaporation system, hauled from the pond, used for dust control or evaporated; was stored in Pond B. This month an average of 11,100 gallons per day of leachate was stored in Pond B.

Effluent Sprayed at Pond B (Column XX)

Column XX presents the daily amount of effluent, in gallons, sprayed for evaporation at Pond B. The amount evaporated is calculated by using 5 percent of the daily flow meter quantity sprayed at Pond B and it is included in Column XX. This month effluent was not sprayed in Pond B.

Effluent Irrigation (Column XXI)

Column XXI presents the daily amount of effluent, in gallons, used for spray irrigation on top of Phases IV-VI. The daily amount of effluent irrigation on Phases I-VI is measured from the flow meter at the irrigation pump station. This month effluent was not used for spray irrigation.

Effluent Dust Control Sprayed (Column XXII)

Column XXII presents the daily amount of effluent, in gallons, sprayed for dust control in the active areas of the SCLF. The daily amount of effluent used for dust control, is measured from the flow meter at the bypass-loading arm. This month effluent was not sprayed as dust control.

Total Effluent Hauled (Column XXIII)

Column XXIII presents the daily amount of effluent, in gallons, hauled off site, as measured from the flow meter at the bypass-loading arm. This month effluent was not hauled off site.

Total Evaporation (Column XXIV)

Column XXIV presents the daily amount of leachate and effluent, in gallons, that evaporates and therefore will not be returned to the SCLF and/or requires treatment. Evaporation rates of 80 percent and 5 percent evaporation rate for spray in Pond B are assumed. Total evaporation estimated for this month was zero gallons.

TABLE 2

Table 2 presents data assembled from daily logs compiled by the SWMD staff.

TABLE 3

Leachate Balance Summary

The Leachate Balance Summary (see Table 3) presents a review of inflow and outflow quantities for the LTRF, as well as rainfall and effluent disposal quantities at the landfill. Total inflow quantity to the LTRF was 4,016,691 gallons. Total outflow quantity from the LTRF was 3,729,332 gallons. The change in storage for the month increased by 287,359 gallons.

Please advise should you have any questions concerning the information provided.

balance\2019\01-19bal.xls

Notes:
1. NR = No Records, NA = Not Available.
2. Values in bold are estimated; values in italic are substitute for missing data and are based on averaged values.
3. Daily average is calculated by dividing the total by the actual days measured in the month.
4. Monthly average calculated by dividing the total by the number of days of the month.
5. Column II, Trace is less than 0.01 inches and is not included in total.
6. Columns III and IV, field measured at staff gauges.
7. Columns VII & VIII, Section 7-8 leak detection pumped into Section 7 leachate sump riser.
8. Column XIII and XIV, calculated from depth in 575,000 gal. tanks.
9. Columns VI-XII, XVI, and XX-XXIV, quantities from flow meters.
10. Column XXIV includes 80% of the daily values from Columns XVII, XXI - XXII, plus 5% of the daily values from column XX.

Note:

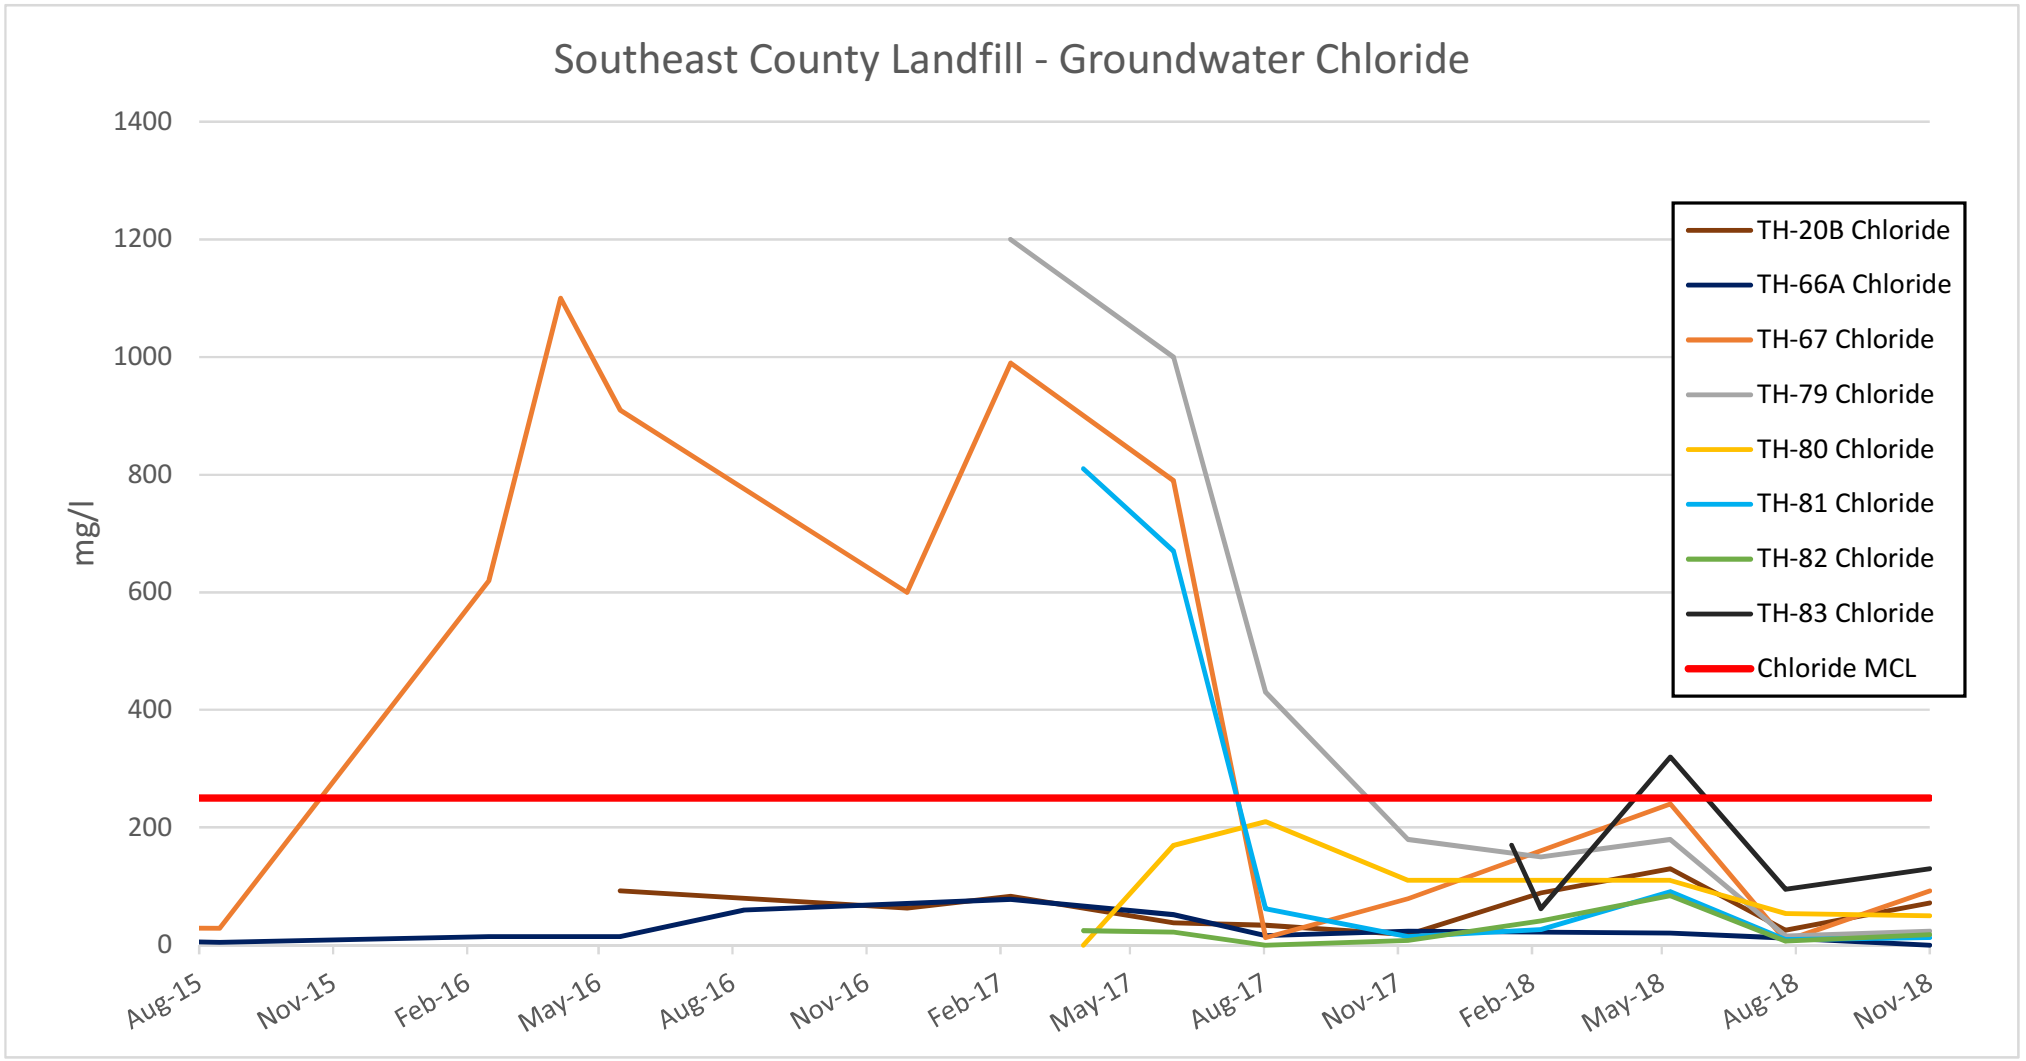

1. If the bypass at the effluent pond is ever used to pump effluent back to the LTRF, this table must be modified.
2. Change in storage represents total inflow to LTRF minus total outflow from LTRF.

Staff Gauge Survey

SURVEYOR's NOTES:

1.) North Grid and coordinates basis is the West Zone of the Florida State Plane Coordinate System NAD 83/90 adjustment. The vertical datum is NAD1929 using control as provided by client prepared by Pickett & Associates.

2.) This survey was prepared to show location of staff gauge as in stalled Jan. 2019. Image shown hereon is from 2017 imagery as provided.

3.) THIS SURVEY IS NOT VALID WITHOUT THE SIGNATURE AND SEAL OF A FLORIDA LICENSED SURVEYOR AND MAPPER.

REPORT

DATE : 1/18/2019
TO : Larry Ruiz – Hillsborough County Solid Waste
FROM : Ralph Calistri (floridajetclean@yahoo.com)
SUBJECT : Hillsborough County Southeast Landfill – Existing LCS Pipe Jetcleaning

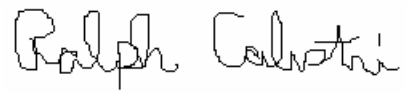

Florida Jetclean was mobilized to the Hillsborough County Southeast County Landfill to conduct high-pressure water-jetting services on selected areas of the existing leachate collection system piping from 1/7/2019 through 1/9/2019. Included below is the jetcleaning log associated with this work.

High-Pressure Water-Jetting:
The below leachate collection pipe segments were high-pressure jetcleaned as far as possible with achieved distances and notes documented in the below jetcleaning log.

LOCATION	DISTANCE ACHIEVED	PIPE TYPE & COMMENTS
Phase I - Cleanout 1-1	667'	8" PVC
Phase I - Cleanout 1-1 West	139'	8" PVC
Phase I - Cleanout 1-1 East	128'	8" PVC
Phase II - Cleanout 2-1	849'	8” HDPE
Phase II - Cleanout 2-2 / 2-3	1,200'	8” HDPE
Phase II - Cleanout 2-4	1,000'	8" PVC
Phase III - Cleanout 3-1	1,023'	8" PVC
Phase IV - Cleanout 4-1	1,723'	8" PVC
Phase V - Cleanout 5-1	1,448'	8" PVC
Phase V - Cleanout 5-2	1,180'	8" PVC
Phase V - Cleanout 5-3	1,193'	8" PVC
Phase V - Cleanout 5-4	1,037'	8" PVC
Phase VI - Cleanout 6-1	1,224'	8" PVC

Please let us know if you have any questions on the report.

Regards,

Ralph Calistri - Florida Jetclean - 800-226-8013
