**Subject:** Southeast County Landfill - February 2019 Monitoring Report - WACS# SWD/29/41193  
**Attachments:** 2019-2 SELF ADR.pdf

Dear Mr. Morgan,

Please find attached an electronic copy of the February 2019 semi-annual monitoring report for the Southeast County Landfill. Should you or anyone copied on this e-mail have any questions or wish to discuss the information submitted, please feel free to call me directly at (813) 663-3222. The Adapt files and report shall be submitted to Tallahassee SWD through the FDEP Business Portal.

Best Regards,

**Michael D. Townsel**

**SUBJECT: Southeast County Landfill  
Solid Waste Operations Permit No. 35435-022-SO/01  
Analytical Data Report – February 2019**

Dear Mr. Morgan:

In accordance with Solid Waste Operation Permit No. 35435-022-SO/01, the Hillsborough County Public Utilities Department (County) has prepared the Analytical Data Report (ADR) for the February 2019 water quality monitoring event at the Southeast County Landfill (SCLF). In accordance with the permit, the monitoring plan included the collection of representative groundwater and surface water samples from sixteen (16) surficial aquifer monitoring wells, four (4) upper Floridan aquifer monitoring wells, three (3) upper Floridan private supply wells, and four (4) surface water sampling locations. All groundwater and surface water samples were collected during the week of February 11-14, 2019 and February 28, 2019. Parameter analysis was completed by our contracted laboratory, Advanced Environmental Laboratories, Inc. (AEL). A site map of each monitoring location is depicted in **Figure 1**.

### **Surficial Aquifer Monitoring Wells**

The following paragraphs provide a brief discussion of the parameter-specific water quality observations across the site. All groundwater analytical data for the February 2019 semi-annual monitoring event is included in **Table 1** and **Table 2** and the laboratory report provided by AEL is included in **Appendix A**.

## **pH**

Each surficial aquifer monitoring well continues to exhibit pH values below the Secondary Drinking Water Standard (SDWS) acceptable range of 6.5 to 8.5 pH units from 4.47 to 6.24 pH units. Background water quality recorded prior to landfill construction and operation established pH below the acceptable range within the surficial aquifer and remains consistent with the historical data set.

## **Total Dissolved Solids (TDS)**

Surficial aquifer monitoring well TH-67 is located downgradient of the Phase II waste area of the landfill and associated with the supplemental quarterly monitoring of groundwater in accordance with the Consent Agreement, OGC File No. 17-0058. TH-67 indicated a TDS value of 140 mg/l and continues to improve since implementation of corrective actions related to water quality changes exhibited in February 2016.

Surficial aquifer detection monitoring well, TH-71A, located down gradient of Section 9, exhibited TDS at a concentration of 1,100 mg/l, exceeding the SDWS of 500 mg/l. Elevated TDS has been observed in the groundwater since 2014 when storm water and sediments advanced through a containment berm around the active working area during a heavy rainfall event. Improvements to the storm water conveyance swale for Section 9 were completed and now effectively channels storm water away from the monitoring locations. The County shall continue to closely monitor the TDS at TH-71A.

## **Chloride**

Chloride was detected in surficial aquifer monitoring well TH-67 below the SDWS of 250 mg/l at a concentration of 5.3 mg/l. The County continues to observe an overall reduction of chloride in the groundwater east of the Phase II landfill area and supports the position the corrective actions will continue to improve water quality conditions to background levels observed prior to February 2016.

Chloride was detected slightly above the SDWS in TH-71A at 260 mg/l and is consistent since 2014 as sediments and storm water from the Section 9 surface area broke through a containment berm during a heavy rainfall event and discharged to a topographical low area near the well.

## **Arsenic**

Arsenic was detected above the Primary Drinking Water Standard (PDWS) of 0.01 mg/l in surficial aquifer detection monitoring well TH-58 at 0.015 mg/l and has historically been above

the standard over the period of record. Detection well TH-65 has previously exhibited arsenic exceedance; however, during the semi-annual water quality monitoring event, arsenic was detected at 0.0079 mg/l. Arsenic in the groundwater samples continue to be directly attributable to the liberation from the sediments in the anaerobic conditions present under the lined landfill. There are no other exceedances of arsenic at the landfill and the detections present are stable and not migrating off site.

## **Iron**

Iron was detected above the SDWS of 0.3 mg/l in a majority of the surficial aquifer detection and background water quality monitoring wells across the site. Concentrations exceeding the standard ranged from 0.33 to 43 mg/l. Iron in the surficial aquifer monitoring wells has historically been elevated and documented to be present across the site prior to construction and operation of the landfill. The County maintains the position elevated iron within the surficial aquifer is naturally occurring and not attributable to the landfill. No unusual changes in iron concentrations have been observed during the semi-annual water quality monitoring event.

### **Upper Floridan Aquifer (UFA) Monitoring Wells**

A brief and detailed description of the groundwater data for each UFA monitoring well is provided in the paragraphs below and included in **Table 2** and the laboratory report provided by AEL is included in **Appendix A**.

## **Total Dissolved Solids (TDS)**

Upper Floridan aquifer (UFA) monitoring well TH-72 exhibited TDS at 1,100 mg/l and is consistent with the data presented over the period of record. The elevated TDS in TH-72 is attributable to the waste from the former sinkhole in Phase VI of the landfill and the injected grout materials utilized for subsurface stabilization and remediation. The downgradient compliance point for the monitoring of Phase VI, identified as TH-78, continues to exhibit water quality within respective standards and clearly demonstrates there are no impacts to downgradient receptors.

## **Iron**

Iron was observed above the SDWS of 0.3 mg/l in UFA monitoring well TH-72 at a concentration of 0.41 mg/l. Iron levels have been consistent since the sinkhole stabilization activities were completed and monthly monitoring associated with the sinkhole were discontinued in 2015. The current semi-annual monitoring of TH-72 and the downgradient water quality in UFA

monitoring well TH-78 continues to demonstrate iron above the SDWS is not laterally migrating off site.

### **Surface Water Sampling Locations**

A brief and detailed description of the surface water data for each monitoring location around the landfill is provided in the paragraphs below and included in **Table 3** and the laboratory report is provided in **Appendix A**.

### **Dissolved Oxygen**

Surface water sampling locations Mine Cut 1D, Stream-3A, SW-3B2B, and Stream 3C2 exhibited dissolved oxygen at 1.38 mg/l, 0.63 mg/l, 6.15 mg/l, and 7.54 mg/l. Sample location Stream-3A is the upstream tributary to Long Flat Creek and representative of surface water entering the Southeast County Landfill property. Surface water sampling location Stream-3C2 is the discharge monitoring point for the site in the tributary to Long Flat Creek. The compiled data exhibits improving water quality across the tributary and is consistent with the historical data set.

### **pH**

Surface water sample locations Stream-3A and SW-3B2B exhibited pH of 5.46 and 5.45 pH units, below the surface water standard acceptable range of 6.0 to 8.5 pH units. The discharge point to Long Flat Creek Steam 3C2 was 6.00 pH units and is consistent with the historical data set.

### **Fecal Coliform**

Surface water sample location SW-3B2B exhibited a fecal coliform detection of 1,200 colonies/100 ml exceeding the surface water standard of 800 colonies/100 ml. Over the period of record, the surface water locations have exhibited fecal coliform due to the large amount of biological waste generated from the many birds and other wildlife that migrate across the site.

### **Turbidity**

In accordance with the April 3, 2003 Approval of Corrective Action Plan letter from the Florida Department of Environmental Protection (FDEP), the County has recorded turbidity data at three monitoring locations in the surface water tributary to Long Flat Creek after each significant rainfall. During the August 2018 semi-annual water quality report, the County requested the discontinuing of post rainfall turbidity monitoring at the facility and closure of the Corrective Action Plan. On January 23, 2019, the Department responded in an email granting the request to discontinue monitoring.

### **Private Supply Wells**

Representative samples from the three (3) private supply wells were collected on February 14, 2019. The private supply well owned by Mr. Terry Holland, located at 121 Carter Road, exhibited iron above the SDWS of 0.3 mg/l, at a concentration of 1.4 mg/l. Concentrations of iron are consistently above the SDWS at the Holland well and the County maintains the position that iron is naturally occurring within production zones of the upper Floridan aquifer. Each remaining supply wells was within all applicable standard and are consistent with the historical results. Data for the three private supply wells sampled during the February 2019 semi-annual water quality monitoring event is provided in **Table 4** and the laboratory report provided by AEL is included in **Appendix A**.

### **Groundwater Elevation and Flow**

Groundwater and surface water elevations were recorded on February 11, 2019 and the data is presented in **Table 5**. Elevation data is collected and utilized to prepare a representative surficial aquifer groundwater contour diagram. A diagram was prepared with a 2 ft. contour interval and is utilized to evaluate the direction of flow across the site. **Figure 2** depicts general flow direction across the landfill remains to the west/northwest with an easterly component controlled by nearby Mine Cut #1 and Mine Cut #2. Elevation data continues to be consistent with the historical evaluations of flow within the surficial aquifer at the Southeast County Landfill.

### **Conclusions**

Water quality observations at the Southeast County Landfill remains consistent with the historical data set. Surficial aquifer groundwater monitoring wells continue to exhibit pH, iron, TDS, and arsenic outside their applicable primary and secondary standards. Background water quality recorded prior to landfill construction and operation established pH and iron below the acceptable range within the surficial aquifer and remains consistent with the historical data set.

Water quality in surficial aquifer monitoring well TH-67, southeast of Phase II waste area of the landfill, did not exhibit indicator parameters of TDS, sodium, and chloride exceeding their respective drinking water standards. As ongoing implementation of corrective actions continue, water quality improvement is anticipated as constituent levels continue to return to background conditions over the upcoming period of record. Monitoring well TH-71A exhibited TDS concentrations above the SDWS during the semi-annual water quality monitoring event and is attributable to sediments and stormwater from the active working area of Section 9. The

Mr. Steve Morgan

June 3, 2019

Page 6 of 6

County implemented corrective actions to the storm water conveyance system in 2014 and has continued to be effective over the last 5 years.

Arsenic was detected in surficial aquifer monitoring well TH-58 exceeding the PDWS of 0.01 mg/l. Over the period of record, TH-58 has consistently exhibited arsenic due to the liberation of arsenic from the sediments in the anaerobic conditions present under the lined landfill.

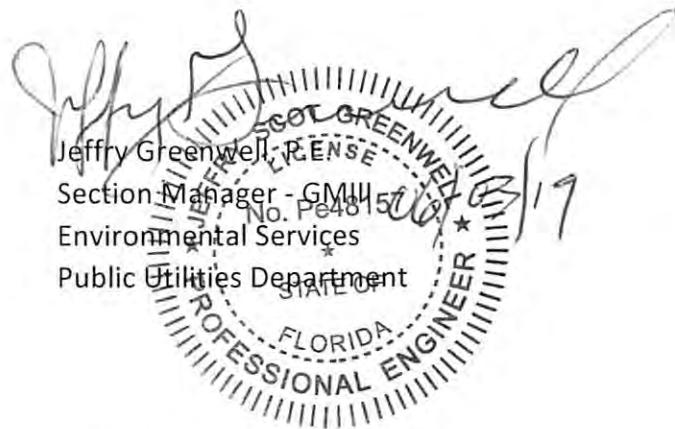

Upper Floridan aquifer monitoring well TH-72 continues to exhibit water quality impacts that are attributable to the former sinkhole within Phase VI of the landfill. TDS and iron continue to exceed their respective standards; however, the water quality remains stable and consistent. The downgradient compliance point for the monitoring of Phase VI, identified as TH-78, continues to exhibit water quality within their respective standards and clearly demonstrates there are no impacts to downgradient receptors.

Surface water monitoring locations were within compliance standards except for pH in Stream-3A and SW-3B2B under the acceptable range and fecal coliform in SW-3B2B above the standard. Each result is consistent with the historical data set.

Should you have any questions, require any additional information, or would like to discuss information provided within the submittal, please feel free to contact us at (813) 663-3222 or (813) 612-7757.

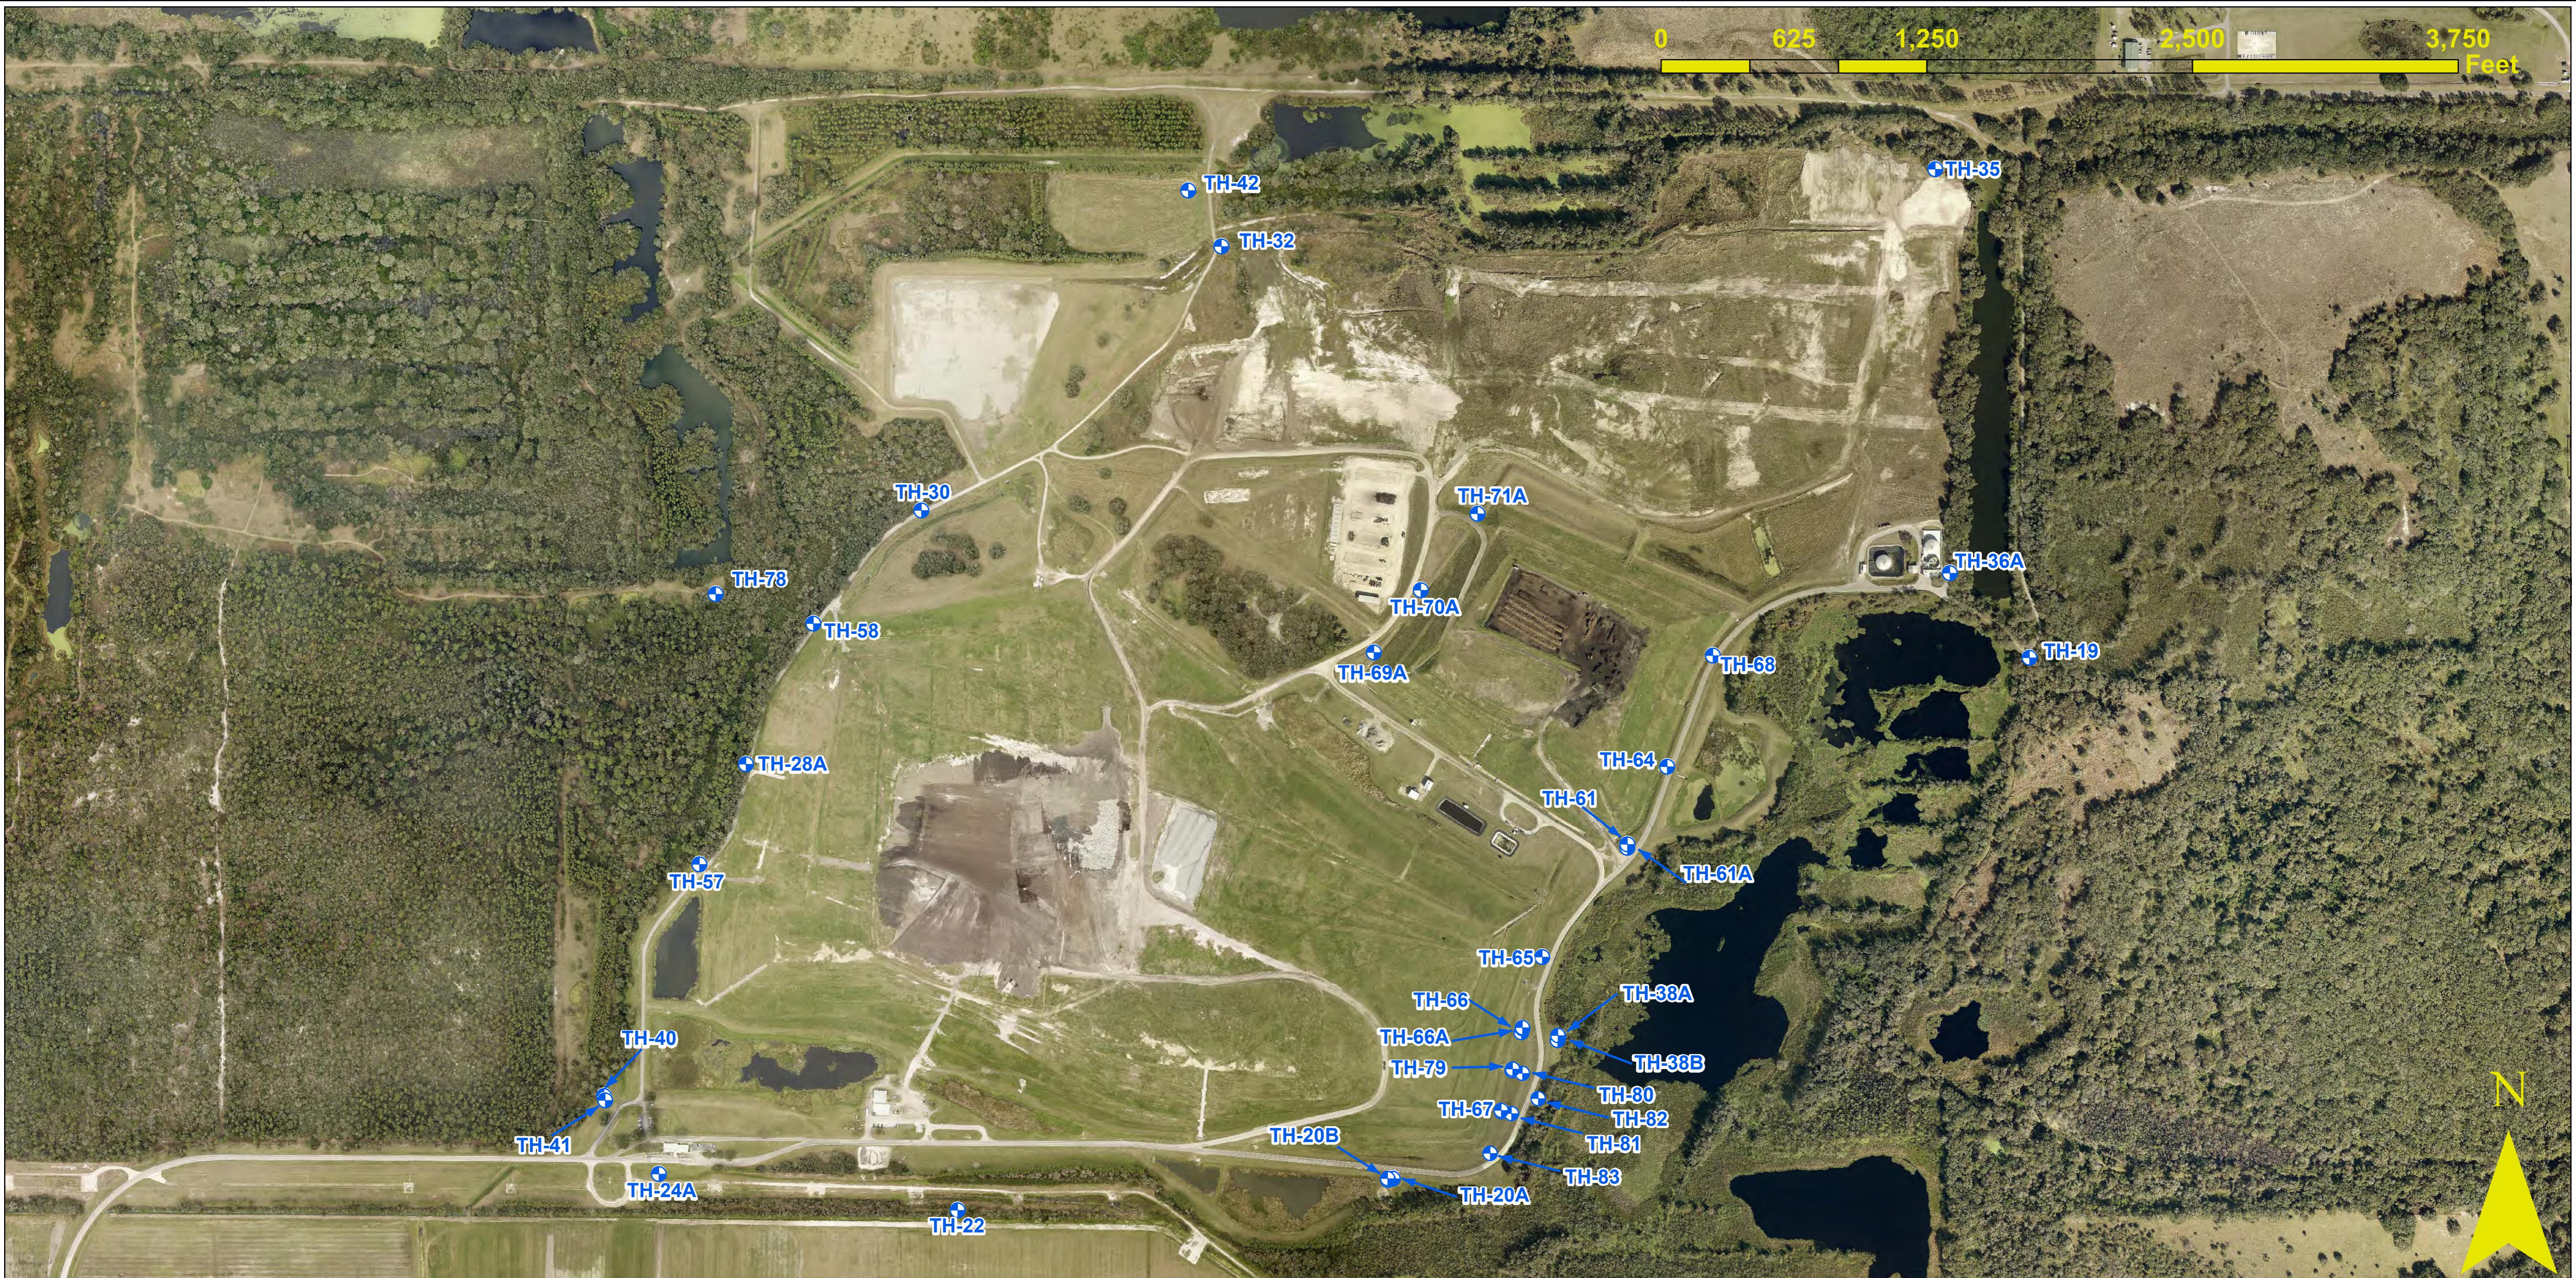

Respectfully submitted,

RE: Workorder: T1902512 SELF Semi-Annual

Dear Michael Townsel:

Enclosed are the analytical results for sample(s) received by the laboratory between Monday, February 11, 2019 and Thursday, February 14, 2019. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report. The analytical results for the samples contained in this report were submitted for analysis as outlined by the Chain of Custody and results pertain only to these samples.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Heidi Parker".

Heidi Parker - Project Manager

## ANALYTICAL RESULTS QUALIFIERS

Workorder: T1902512 SELF Semi-Annual

### PARAMETER QUALIFIERS

- U The compound was analyzed for but not detected.
- I The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- B Indicates that the analyte was detected in the method blank. The recorded result is associated with a contaminated blank.
- J1 Surrogate Failure
- J4 Estimated Result

### LAB QUALIFIERS

- G DOH Certification #E82001(AEL-G)(FL NELAC Certification)
- J DOH Certification #E82574(AEL-JAX)(FL NELAC Certification)
- T DOH Certification #E84589(AEL-T)(FL NELAC Certification)
- T^ Not Certified

## QUALITY CONTROL DATA QUALIFIERS

Workorder: T1902512 SELF Semi-Annual

### QUALITY CONTROL PARAMETER QUALIFIERS

- U     The compound was analyzed for but not detected.
- I     The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- J4    Estimated Result

## CERTIFICATE OF ANALYSIS

**Client Name:** Hillsborough County Public Utilities

**ProjectID:** SELF Semi-Annual

**I. Receipt**

No Exceptions were encountered.

**II. Holding Times**

Preparation: All holding times were met.

Analysis: All holding times were met.

**III. Method**

Analysis: SW-846 7470A

Preparation: SW-846 7470A

**IV. Preparation**

Sample preparation proceeded normally.

**V. Analysis**

A. Calibration: All acceptance criteria were met.

B. Blanks: All acceptance criteria were met.

C. Duplicates: All acceptance criteria were met.

D. Spikes: The matrix spike (MS) and matrix spike duplicate (MSD) recoveries of Mercury for M1900719001 were outside control criteria. Recovery in the Laboratory Control Sample (LCS) was acceptable, which indicates the analytical batch was in control. The matrix spike outlier suggests a potential high bias in this matrix. No further corrective action is required.

E. Serial Dilution: All acceptance criteria were met.

F. Samples: Sample analyses proceeded normally.

G. Other:

**III. Method**

Analysis: SW-846 8260B

Preparation: SW-846 5030B

**IV. Preparation**

Sample preparation proceeded normally.

**V. Analysis**

A. Calibration: All acceptance criteria were met.

B. Blanks: All acceptance criteria were met.

C. Surrogates: The upper control criterion was exceeded for the surrogate bromofluorobenzene in samples T1902512004 and T1902512011. The error associated with an elevated recovery equates to a high bias. The quality of the sample data is not significantly affected, as internal recoveries were within acceptance criteria of the ICAL and are consistent with quality control samples. No target analytes associated with this surrogate were detected in the client samples. The outlier surrogates are qualified with a J1.

D. Spikes: All acceptance criteria were met.

E. Internal Standard: All acceptance criteria were met.

F. Samples: Sample analyses proceeded normally.

G. Other: The trip blank T1902512016 contained DCM due to lab contamination. No DCM was in the client samples, the data is not effected.

**Project No.:** T1902512

**Client Name:** Hillsborough County Public Utilities

**ProjectID:** SELF Semi-Annual

**I. Receipt**

No Exceptions were encountered.

**II. Holding Times**

Preparation: All holding times were met.

Analysis: All holding times were met.

**III. Method**

Analysis: SW-846 8260B (SIM)

Preparation: SW-846 5030B

**IV. Preparation**

Sample preparation proceeded normally.

**V. Analysis**

A. Calibration: All acceptance criteria were met.

B. Blanks: All acceptance criteria were met.

C. Surrogates: All acceptance criteria were met.

D. Spikes: All acceptance criteria were met.

E. Internal Standard: The internal standard 1,4-difluorobenzene failed to meet control criteria for the matrix spike 3001963. No target analytes are associated with this internal standard, the data is not effected.

F. Samples: Sample analyses proceeded normally.

G. Other:

**Project No.:** T1902512

**Client Name:** Hillsborough County Public Utilities

**ProjectID:** SELF Semi-Annual

**I. Receipt**

No Exceptions were encountered.

**II. Holding Times**

Preparation: All holding times were met.

Analysis: All holding times were met.

**III. Method**

Analysis: SM 4500-CI-E

Preparation: None

**IV. Preparation**

Sample preparation proceeded normally.

**V. Analysis**

A. Calibration: All acceptance criteria were met.

B. Blanks: All acceptance criteria were met.

C. Duplicates: All acceptance criteria were met.

D. Spikes: The matrix spike (MS) and matrix spike duplicate (MSD) recoveries of Chloride for T1902512004 and T1902512005 were outside control criteria. Recovery in the Laboratory Control Sample (LCS) was acceptable, which indicates the analytical batch was in control. The matrix spike outlier suggests a potential low bias in this matrix. No further corrective action is required.

E. Serial Dilution: All acceptance criteria were met.

F. Samples: Sample analyses proceeded normally.

G. Other:

**Project No.:** T1902512

**Client Name:** Hillsborough County Public Utilities

**ProjectID:** SELF Semi-Annual

**I. Receipt**

No Exceptions were encountered.

**II. Holding Times**

Preparation: All holding times were met.

Analysis: All holding times were met.

**III. Method**

Analysis: EPA 351.2

Preparation: Copper Sulfate Digestion

**IV. Preparation**

Sample preparation proceeded normally.

**V. Analysis**

A. Calibration: All acceptance criteria were met.

B. Blanks: All acceptance criteria were met.

C. Duplicates: All acceptance criteria were met.

D. Spikes: The matrix spike (MS) and matrix spike duplicate (MSD) recoveries of TKN for T1902728002 were outside control criteria. Recoveries in the Laboratory Control Sample (LCS) and %RPD were acceptable, which indicates the analytical batch was in control. The matrix spike outlier suggests a potential high bias in this matrix. No further corrective action was required.

E. Serial Dilution: All acceptance criteria were met.

F. Samples: Sample analyses proceeded normally.

G. Other:

**Project No.:** T1902512

**Client Name:** Hillsborough County Public Utilities

**ProjectID:** SELF Semi-Annual

**I. Receipt**

No Exceptions were encountered.

**II. Holding Times**

Preparation: All holding times were met.

Analysis: All holding times were met.

**III. Method**

Analysis: SM 2340C

Preparation: None

**IV. Preparation**

Sample preparation proceeded normally.

**V. Analysis**

A. Calibration: All acceptance criteria were met.

B. Blanks: All acceptance criteria were met.

C. Duplicates: All acceptance criteria were met.

D. Spikes: The relative percent difference (RPD) for Total between the Matrix Spike (MS) and the Matrix Spike Duplicate (LCSD) was outside control criteria due to relatively higher spike recovery in 3007110 in comparison with 3007109. Spike recoveries in the LCS and CCV were within acceptable limits, indicating the analytical batch was in control. No further corrective action was required.

E. Serial Dilution: All acceptance criteria were met.

F. Samples: Sample analyses proceeded normally.

G. Other:

**Project No.:** T1902512

**Client Name:** Hillsborough County Public Utilities

**ProjectID:** SELF Semi-Annual

**I. Receipt**

No Exceptions were encountered.

**II. Holding Times**

Preparation: All holding times were met.

Analysis: All holding times were met.

**III. Method**

Analysis: EPA 350.1

Preparation: None

**IV. Preparation**

Sample preparation proceeded normally.

**V. Analysis**

A. Calibration: All acceptance criteria were met.

B. Blanks: All acceptance criteria were met.

C. Duplicates: All acceptance criteria were met.

D. Spikes: The matrix spike recoveries of Ammonia for T1902512021 & T1902731002 were outside control criteria. Recoveries in the Laboratory Control Sample (LCS), and %RPD were acceptable, which indicates the analytical batch was in control. No further corrective action was required.

E. Serial Dilution: All acceptance criteria were met.

F. Samples: Sample analyses proceeded normally.

G. Other:

**Queue:** ICMj

**Batch Number:** 1754

**I. Receipt**

No Exceptions were encountered.

**II. Holding Times**

Preparation: All holding times were met.  
Analysis: All holding times were met.

**III. Method**

Analysis: SW-846 6020  
Preparation: SW-846 3010A

**IV. Preparation**

Sample preparation proceeded normally.

**V. Analysis**

A. Calibration: The upper control criterion was exceeded for TI in the Initial Calibration Verification (ICV), indicating increased sensitivity. The client samples reported in this batch did not contain the analytes in question. Since the apparent problem equates to a potential high bias, the data quality is not affected. No further corrective action was required.  
B. Blanks: All acceptance criteria were met.  
C. Duplicates: All acceptance criteria were met.  
D. Spikes: All acceptance criteria were met.  
E. Serial Dilution: All acceptance criteria were met.  
F. Samples: Sample analyses proceeded normally.  
G. Other:
