DEP Form #: 62-701.900(31), F.A.C.  
Form Title: Water Quality Monitoring Certification  
Effective Date: January 6, 2010  
Incorporated in Rule 62-701.510(9), F.A.C.

## WATER QUALITY MONITORING CERTIFICATION

### PART I GENERAL INFORMATION

(1) Facility Name Lena Road Class I Landfill

Address 3333 Lena Road

City Bradenton, FL

Zip 34211

County Manatee

Telephone Number (941) 748-5543

(2) WACS Facility ID 44795

(3) DEP Permit Number 39884-021-SO-01

(4) Authorized Representative's Name Bryan White Title Landfill Superintendent

Address 3333 Lena Road

City Bradenton, FL

Zip 34211

State Florida

Telephone Number (941) 748-5543 X8008

Email address (if available) bryan.white@mymanatee.org

### CERTIFICATION

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submission of false information including the possibility of fine and imprisonment.

2-10-20

## **1 INTRODUCTION**

SCS Engineers (SCS) prepared this semi-annual water quality monitoring report for the Lena Road Landfill (WACS ID 44795) on behalf of Manatee County Utilities Department. The Lena Road Landfill is located at 3333 Lena Road, Bradenton, Florida, and encompasses 316 acres of disposal areas and related facilities (Figure 1-1). The landfill is constructed with a perimeter slurry wall.

This report was prepared in accordance with Florida Department of Environmental Protection (FDEP) Permit No. 39884-021-SO-01, Water Quality Monitoring Plan; FDEP Standard Operating Procedures (Chapter 62-160, Florida Administrative Code [FAC]); and FDEP Solid Waste Water Quality Monitoring Requirements (Chapter 62-701.510(8)(a) FAC). Monitoring locations are shown on Figure 1-2. The second semi-annual 2019 groundwater data was collected on November 5-11, 2019. Additionally, monitoring wells BGW-1, GW-18, GW-19, and GW-25 were resampled for select parameters on December 26, 2019. An electronic data deliverable (EDD) of the results in “ADaPT format” is attached as Appendix B. This EDD has been verified as uploadable into the latest version of ADaPT.

Water quality sampling and analyses were performed by Pace Analytical Services, LLC (Pace). Fieldwork, sampling methodologies, data evaluation, and data Quality Assurance/Quality Control were conducted in accordance with FAC Chapter 62-160 Standard Operating Procedures (DEP-SOP-001/01) and the Lena Road Landfill solid waste permit. Laboratory analyses were performed in accordance with Chapter 62-160, FAC DEP-SOP-002/01 and the Lena Road Landfill solid waste permit. Pace is certified by the Florida Department of Health Environmental Laboratory Certification Program.

## 2 GEOLOGIC AND HYDROGEOLOGIC CHARACTERISTICS

Figure 1-1 shows the topography of the Lena Road Landfill and region. The regional geologic units, which comprise the subsurface beneath the site consist of, in descending order, the undifferentiated Pliocene to Recent age deposits, the Hawthorne Group, the Suwannee Limestone, the Ocala Group, and the Avon Park Limestone. The Pliocene to Recent age deposits are unconsolidated sediments and comprised of sand, silt, and clay. They measure approximately 30 feet thick beneath Manatee County. The Pliocene to Recent age deposits overlay the Hawthorne Group, a heterogeneous sequence of phosphatic, sandy, clayey, calcareous, and dolomitic sediments, which is 200-300 feet thick throughout the region. Underlying the Hawthorne Group, in descending order, are the Oligocene Suwannee Limestone, the Eocene Ocala Group, and the Avon Park Limestone. These formations generally consist of tan, granular limestone and interbedded dolomite, and collectively reach a thickness of approximately 1,600 feet in Manatee County.

Local hydrogeology is characterized by three aquifers underlying Manatee County and the Lena Road Landfill site:

- Surficial aquifer system
- Intermediate aquifer system
- Floridan aquifer system

The surficial aquifer system occurs within the Pliocene to Recent age deposits. The surficial aquifer is generally undeveloped as a source of potable water in Manatee County, with only a small volume used for domestic supply, lawn irrigation, and stock watering. The direction of groundwater flow in the surficial aquifer in Manatee County is generally to the west and south. This pattern is interrupted locally where the aquifer discharges into streams, lakes, or low swampy areas.

The intermediate aquifer system occurs within the Hawthorne Group. The intermediate aquifer system supplies most of the water for domestic and irrigation use in Manatee County. The quality of water in the intermediate aquifer is generally good except near the coast where saltwater intrusion has occurred. In the central portion of the County, concentrations of dissolved solids range from approximately 250 to 400 parts per million.

The Floridan aquifer system in Manatee County occurs within the carbonates of the Tampa Limestone, Suwannee Limestone, the Ocala Group, and the Avon Park Limestone. Water from the Floridan aquifer is used primarily for irrigation, with minor amounts used for industrial purposes, and occasionally for public and domestic water supplies.

## SEMI-ANNUAL GROUNDWATER FLOW ASSESSMENT

The groundwater flow direction in the surficial aquifer was evaluated using the groundwater elevation data collected from Lena Road Landfill monitoring wells on November 5 through 7, 2019. This groundwater flow evaluation included collecting depth to groundwater measurements, calculating groundwater elevations, and production of site figures depicting groundwater contours and the estimated groundwater flow direction. Table 2-1 lists monitoring well numbers, measured depths to water, and calculated groundwater elevations for the second 2019 semi-annual sampling event. Figure 2-1 shows groundwater potentiometric contours interpolated from the November 5-7, 2019, groundwater elevation data. The water level contours are inferred from the water level data collected outside and immediately adjacent to the slurry wall. Based on the November 2019 potentiometric map, groundwater flow direction is generally toward the north-northwest, which is consistent with previous groundwater flow evaluations.

**Table 2-1. Groundwater Elevation Measurements, November 5-7, 2019**  
**Lena Road Landfill, Manatee County, Florida**

Location ID	Top of Casing Elevation (Feet NGVD)	Depth to Water (Feet Below Top of Casing)	11/5-7/2019 Groundwater Elevation (Feet NGVD)

### **3 LANDFILL MONITORING PROGRAM**

According to Lena Road Landfill's permit<sup>1</sup>, the landfill monitoring program consists of monitoring the surficial aquifer groundwater quality and surface water quality.

#### **GROUNDWATER MONITORING PROGRAM**

The surficial aquifer groundwater is currently monitored at 26 groundwater monitoring wells (GW-3 through GW-27R and BGW-1). The well locations are shown on Figure 1-2. The construction details for the active monitoring wells comprising the monitoring system are included in Table 3-1. The permit requires semi-annual sampling of the monitoring wells for the field and laboratory parameters listed below.

##### **Field Parameters**

- Static water level in wells before purging
- Dissolved oxygen
- pH
- Specific conductivity
- Temperature
- Turbidity
- Colors and sheens (by observation)

##### **Laboratory Parameters (Unfiltered)**

- Total ammonia – nitrogen
- Chlorides
- Iron
- Mercury
- Nitrate
- Sodium
- Total dissolved solids (TDS)
- Those parameters listed in 40 Code of Federal Regulations (CFR) Part 258, Appendix I

Semi-annual reporting of the groundwater sampling results is performed in accordance with the Lena Road Landfill permit<sup>1</sup>.

Notes:

1. Well information was obtained from Atkins.
2. NGVD = National Geodetic Vertical Datum of 1929.
3. NAD 1983 = North American Datum of 1983.
4. WACS = State Water Assurance Compliance System.
5. BTOC = Below Top of Casing.
6. DE = Detection.
7. BG = Background.

## **SURFACE WATER MONITORING PROGRAM**

The surface water monitoring sites include one downstream location (SW-1) and one upstream location (SW-2). The surface water sampling locations are shown on Figure 1-2. Electronic water level monitoring devices have been installed at the pump stations in the East Lake and the South Lake (see Figure 1-2), and are used to measure water levels at the surface water bodies near the landfill.

Surface water sampling locations are sampled semi-annually for the following parameters:

### **Field Parameters**

- Surface water elevation
- Specific conductivity
- pH
- Dissolved oxygen
- Turbidity
- Temperature
- Colors and sheens (by observation)

### **Laboratory Parameters (Unfiltered)**

- Un-ionized ammonia as nitrogen
- Total hardness (as  $\text{CaCO}_3$ )
- Biochemical oxygen demand ( $\text{BOD}_5$ )
- Iron
- Mercury
- Nitrate
- TDS
- Total organic carbon (TOC)
- Fecal coliform
- Total phosphorus as P
- Chlorophyll A
- Total nitrogen
- Chemical oxygen demand (COD)
- Total suspended solids (TSS)
- Those parameters listed in 40 CFR 258, Appendix I

## **4 GROUNDWATER QUALITY**

Semi-annual reporting of the groundwater sampling results is performed in accordance with Rule 62-701, FAC. Appendix A includes the laboratory analytical reports and field forms for the second semi-annual 2019 monitoring event. Table 4-1 lists groundwater quality detections and exceedances. Exceedances are concentrations in excess of the Primary Drinking Water Standards (PDWS) or Secondary Drinking Water Standards (SDWS). In accordance with Chapter 62-701, FAC, groundwater results were compared to the PDWS and SDWS established in Chapter 62-550, FAC, and incorporated via reference in Chapter 62-520, FAC. Chapter 62-777, FAC, states that the Cleanup Target Levels (CTLs) are default cleanup criteria that apply to site rehabilitation, and they are not to be construed to create any new water quality standards pursuant to Chapters 62-302, 62-520, or 62-550, FAC (see Rules 62-777.150(7) and 62-777.170(1)(a) and (b), FAC). Furthermore, per Rule 62-701.510(6)(c)2, FAC, CTLs (only incorporated into Chapter 62-701, FAC via reference to Chapter 62-780, FAC in Rule 62-701.510(6)(c), FAC) are only applicable to solid waste facilities outside of the zone of discharge. Therefore, comparison of the water quality results to CTLs is not applicable and is not generally provided in this report.

### **METALS EXCEEDANCES**

During the November 2019 sampling event, arsenic and iron concentrations exceeded the applicable groundwater standards in the monitoring wells discussed below. These exceedances are listed in Table 4-1.

#### **Arsenic**

Arsenic was detected above the PDWS of 10 micrograms per liter ( $\mu\text{g}/\text{L}$ ) in background monitoring well BGW-1 (17.2  $\mu\text{g}/\text{L}$ ) and detection monitoring wells GW-10 (22.6  $\mu\text{g}/\text{L}$ ), GW-13 (16  $\mu\text{g}/\text{L}$ ), GW-18 (28.2  $\mu\text{g}/\text{L}$ ), GW-20 (14.7  $\mu\text{g}/\text{L}$ ), and GW-22 (14.4  $\mu\text{g}/\text{L}$ ) during the second semi-annual 2019 sampling event. The arsenic concentration at BGW-1 was a first time exceedance, and concentrations have historically been below the PDWS. Accordingly, confirmation monitoring was performed in accordance with Rule 62-701.510(6)(a), FAC to verify this anomalous result. The confirmation monitoring was performed on December 26, 2019. The resampling result was 7.1  $\mu\text{g}/\text{L}$ , which is below the PDWS. Therefore, the initial detection was not confirmed and is not considered to be valid.

Arsenic concentrations at GW-10, GW-13, GW-18, GW-20, and GW-22 were within historical concentration ranges. The arsenic does not appear to be from landfill liquids as the leachate indicator parameters (sodium and chloride) are stable and generally not increasing.

#### **Iron**

Iron was detected above the SDWS of 300  $\mu\text{g}/\text{L}$  in 24 of the monitoring wells (BGW-1, GW-3 through GW-6, and GW-9 through GW-27R) sampled during the second semi-annual 2019 sampling event. Iron concentrations in monitoring wells GW-7 and GW-8 were below the SDWS. Iron concentrations in the other wells exceeded the SDWS. The iron concentrations in background monitoring well BGW-1 and detection monitoring wells GW-3 through GW-6 and GW-9 through GW-27R ranged from 467  $\mu\text{g}/\text{L}$  to 24,500  $\mu\text{g}/\text{L}$  during the November 2019 sampling event and were generally consistent with historical data.

Table 4-1. Summary of Groundwater Quality Analytical Results (Detected Parameters Only)

Notes:

1. PDWS = Primary Drinking Water Standard (62-550 F.A.C.)
2. SDWS = Secondary Drinking Water Standard (62-550 F.A.C.)
3. MPIS = Monitoring Plan Implementation Schedule
4. NS = No numeric standard has been set for this analyte.
5. mg/L = milligrams per liter
6. ug/L = micrograms per liter
7. umhos/cm = micromhos per centimeter
8. % Sat. = percent saturation
9. SU = standard units
10. Degrees C = degrees Celsius
11. NTU = nephelometric turbidity units
12. Yellow shaded values indicate parameter concentrations exceeded the PDWS or SDWS.
13. U = Analyte concentration was below the laboratory detection limit (value shown).
14. I = Analyte concentration was between the laboratory detection limit and laboratory practical quantitation limit.
15. --- = Parameter not sampled for
16. MCL = Maximum Contaminant Level
17. An initial unverified arsenic concentration of 17.2 ug/L was detected in well BGW-1, but confirmation monitoring revealed a lower concentration, as shown in this table.
18. An initial un

## GENERAL CHEMISTRY AND FIELD PARAMETERS EXCEEDANCES

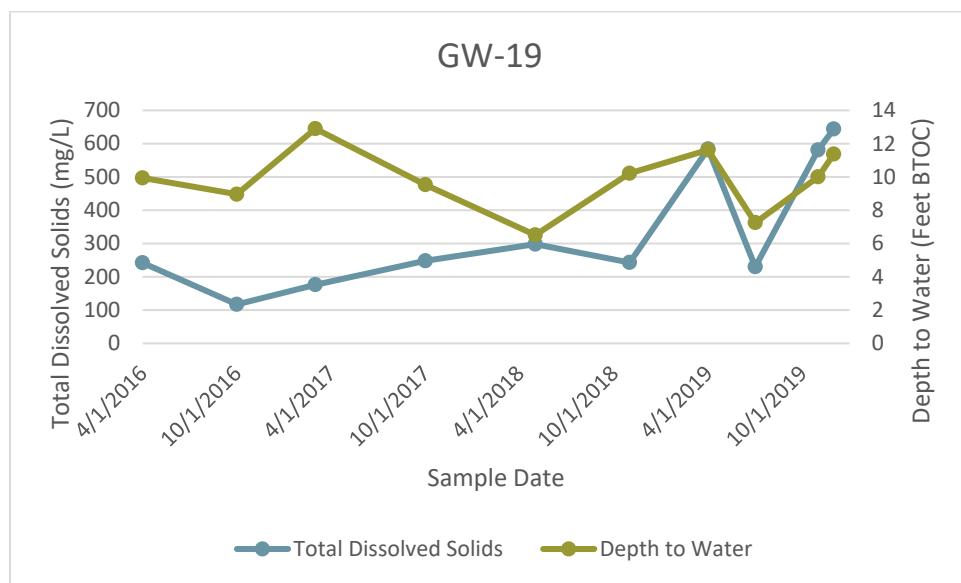

### pH

The pH measurements were not within the SDWS range of 6.5-8.5 standard units (SU) in the groundwater samples collected from several of the monitoring wells during the second semi-annual 2019 sampling event. The pH measurements were below the range in background monitoring well BGW-1 and detection monitoring wells GW-3, GW-12, GW-13, GW-15, and GW-17 through GW-27R.

### TDS

During the November 2019 sampling event, TDS concentrations exceeded the SDWS of 500 milligrams per liter (mg/L) in monitoring wells GW-6 (667 mg/L), GW-13 (626 mg/L), GW-14 (513 mg/L), GW-15 (607 mg/L), GW-18 (506 mg/L), GW-19 (581 mg/L), and GW-25 (538 mg/L). The exceedances at GW-6 and GW-13 through GW-15 are consistent with historical concentrations.

The TDS concentrations at GW-18, GW-19, and GW-25 were first time exceedances, and concentrations have historically been below the SDWS in these wells. Accordingly, confirmation monitoring was performed in accordance with Rule 62-701.510(6)(a), FAC to verify these anomalous results. The confirmation monitoring was performed on December 26, 2019. The resampling results were 433 mg/L (GW-18) and 445 mg/L (GW-25), which are below the SDWS. Therefore, the initial detections in GW-18 and GW-25 were not confirmed and are not considered to be valid. However, the confirmation monitoring results did confirm the TDS concentration in well GW-19. The first time TDS exceedance in GW-19 can be correlated to a lower groundwater elevation in the well as shown in the graph below. The TDS concentration in GW-19 will continue to be monitored in subsequent sampling events.

## 5 SURFACE WATER QUALITY

Exceedances in surface water quality concentrations of various parameters are defined as concentrations in excess of Chapter 62-701.510(5)(d)&(7)(b), FAC. Table 5-1 lists the detections at surface water locations SW-1 and SW-2.

Iron was detected above the maximum contaminant level (MCL) of 1,000 µg/L in SW-1 (2,280 µg/L) and SW-2 (8,400 µg/L) during the November 2019 sampling event. The iron concentrations detected during the November 2019 sampling event are consistent with historical data.

During the November 2019 sampling event, the surface water sample collected from SW-2 had a detection above the MCL of 50 µg/L for arsenic (59.2 µg/L). The arsenic concentration appears to be related to the sample's elevated turbidity of 7.8 nephelometric turbidity units. The field sampler noted a tannic appearance of the surface water.

The dissolved oxygen concentrations at SW-1 (4.10 mg/L) and SW-2 (4.65 mg/L) were lower than the Surface Water Criteria of greater than 5.0 mg/L. The dissolved oxygen concentrations at SW-1 and SW-2 are consistent with historical values. Other concentrations of sampled parameters did not exceed their respective Surface Water Criteria during the November 2019 sampling event.

Appendix A includes the laboratory analytical report and field forms for surface water sampling locations SW-1 and SW-2.

**Table 5-1. Summary of Surface Water Quality Analytical Results  
(Detected Parameters Only)  
Lena Road Landfill, November 2019**

Parameter	MCL	Units	SW-1	SW-2
<b>Volatile Organic Compounds</b>

Notes:

1. MCL = Maximum Contaminant Level.
2. Parameter MCL is a Surface Water Criterion (Chapter 62-302 F.A.C.).
3. NS = No numeric standard has been set for this analyte.
4. Turbidity MCL is 29 NTUs over background levels.
5. Yellow shaded values indicate parameter concentrations exceeded the MCL.
6. mg/L = milligrams per liter.
7. ug/L = micrograms per liter.
8. umhos/cm = micromhos/centimeter.
9. NTU = nephelometric turbidity units.
10. U = Analyte concentration was below the laboratory detection limit (value shown).
11. I = Analyte concentration was between the laboratory detection limit and laboratory practical quantitation limit.
12. SU = standard units.
13. Degrees C = degrees Celsius.
14. CFU = colony forming unit.
15. TDS = Total Dissolved Solids.
16. TSS = Total Suspended Solids.

## 6 SUMMARY

The groundwater flow assessment showed that the groundwater in the surficial aquifer flows primarily to the north-northwest. The groundwater flow direction is consistent with historical data.

The analytical results from the November 2019 sampling event showed the following exceedances:

- Arsenic was detected above the PDWS of 10 µg/L in background monitoring well BGW-1 and detection monitoring wells GW-10, GW-13, GW-18, GW-20, and GW-22 during the second semi-annual 2019 sampling event. The arsenic concentration at BGW-1 was a first time exceedance. Confirmation monitoring was performed on December 26, 2019, and the resampling results did not confirm the first time arsenic exceedance at BGW-1. Arsenic concentrations at GW-10, GW-13, GW-18, GW-20, and GW-22 were consistent with historical results. The arsenic does not appear to be from landfill liquids as the leachate indicator parameters (sodium and chloride) are stable and generally not increasing.
- Iron was detected above the SDWS of 300 µg/L in 24 of the monitoring wells sampled during the second semi-annual 2019 sampling event. Iron concentrations in monitoring wells GW-7 and GW-8 were below the SDWS. Iron concentrations in the other wells exceeded the SDWS. The iron concentrations at BGW-1, GW-3 through GW-6, and GW-9 through GW-27R during the November 2019 sampling event were generally consistent with historical data.
- The pH measurements were not within the SDWS range of 6.5-8.5 SU in the groundwater samples collected from several of the monitoring wells during the second semi-annual 2019 sampling event. The pH measurements were below the range in monitoring wells BGW-1, GW-3, GW-12, GW-13, GW-15, and GW-17 through GW-27R.
- During the November 2019 sampling event, TDS concentrations exceeded the SDWS of 500 mg/L in monitoring wells GW-6, GW-13, GW-14, GW-15, GW-18, GW-19, and GW-25. The exceedances at GW-6 and GW-13 through GW-15 are consistent with historical concentrations. The TDS concentrations at GW-18, GW-19, and GW-25 were first time exceedances. Confirmation monitoring was performed on December 26, 2019, and the resampling results did not confirm the first time TDS exceedances at GW-18 and GW-25. However, the confirmation monitoring results did confirm the TDS concentration in well GW-19. The first time TDS exceedance in GW-19 can be correlated to a lower groundwater elevation.
- Iron was detected above the MCL of 1,000 µg/L in both surface water samples during the November 2019 sampling event.
- The surface water sample collected from SW-2 had a detection above the MCL for arsenic. The arsenic concentration appears to be related to an elevated turbidity during sampling.
- The dissolved oxygen concentrations at SW-1 and SW-2 were lower than the Surface Water Criteria of greater than 5.0 mg/L during the November 2019 sampling event. These detections were consistent with historical data.

### Groundwater and Surface Water Laboratory Analytical Reports and Field Forms

February 07, 2020

Anthony Detweiler  
Manatee County Solid Waste  
3333 Lena Road  
Bradenton, FL 34211

RE: Project: Lena Road Landfill  
Pace Project No.: 35511217

Dear Anthony Detweiler:

Enclosed are the analytical results for sample(s) received by the laboratory between November 05, 2019 and November 11, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

The report was revised to include field logs that were missing from the previous report. This replaces the report issued on 2/6/20.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Cameron Meynardie  
cameron.meynardie@pacelabs.com  
813-855-1844  
Project Manager

## QUALIFIERS

Project: Lena Road Landfill  
Pace Project No.: 35511217

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.  
ND - Not Detected at or above adjusted reporting limit.  
TNTC - Too Numerous To Count  
MDL - Adjusted Method Detection Limit.  
PQL - Practical Quantitation Limit.  
RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.  
S - Surrogate  
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.  
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.  
LCS(D) - Laboratory Control Sample (Duplicate)  
MS(D) - Matrix Spike (Duplicate)  
DUP - Sample Duplicate  
RPD - Relative Percent Difference  
NC - Not Calculable.  
SG - Silica Gel - Clean-Up  
U - Indicates the compound was analyzed for, but not detected.  
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.  
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.  
TNI - The NELAC Institute.

### LABORATORIES

PASI-O Pace Analytical Services - Ormond Beach  
PASI-Tp Pace Analytical Services - Tampa

### ANALYTE QUALIFIERS

- I The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- U Compound was analyzed for but not detected.
- B Results based upon colony counts outside the acceptable range.
- J(D6) Estimated Value. The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits.
- J(L2) Estimated Value. Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
- J(M1) Estimated Value. Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- J(v1) The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.
- J(v2) The continuing calibration verification was below the method acceptance limit. The analyte was not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.
- J(v3) The continuing calibration verification was below the method acceptance limit. Any detection for the analyte in the associated samples may have a low bias.
- L Off-scale high. Actual value is known to be greater than value given.
- MS Analyte recovery in the matrix spike was outside QC limits for one or more of the constituent analytes used in the calculated result.
- N2 The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.

RE: Project: Lena Road Landfill-Recollect  
Pace Project No.: 35520889

Dear Anthony Detweiler:

Enclosed are the analytical results for sample(s) received by the laboratory on December 26, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Cameron Meynardie  
cameron.meynardie@pacelabs.com  
813-855-1844  
Project Manager

## QUALIFIERS

Project: Lena Road Landfill-Recollect  
Pace Project No.: 35520889

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### LABORATORIES

PASI-O Pace Analytical Services - Ormond Beach

PASI-Tp Pace Analytical Services - Tampa

### ANALYTE QUALIFIERS

U Compound was analyzed for but not detected.

Document Name:  
Groundwater Sampling Log  
Document No.:  
E-EL-C-021 rev. 00

Document Revised:  
December 03, 2012  
Issuing Authority:  
Pace Florida Quality Office

**Form FD 9000-24**

SITE NAME:	M.C. LENARD RD. L.F	SITE LOCATION:	3333 LENARD RD. BRADENTON
WELL NO:	GW-25	SAMPLE ID:	GW-25
		DATE: 12-26-19	

## PURGING DATA

**WELL CAPACITY** (Gallons Per Foot):  $0.75'' = 0.02$ ;  $1'' = 0.04$ ;  $1.25'' = 0.06$ ;  $2'' = 0.16$ ;  $3'' = 0.37$ ;  $4'' = 0.65$ ;  $5'' = 1.02$ ;  $6'' = 1.47$ ;  $12'' = 5.88$   
**TUBING INSIDE DIA. CAPACITY** (Gal./Ft.):  $1/8'' = 0.0008$ ;  $3/16'' = 0.0014$ ;  $1/4'' = 0.0026$ ;  $5/16'' = 0.004$ ;  $3/8'' = 0.006$ ;  $1/2'' = 0.010$ ;  $5/8'' = 0.016$

**PURGING EQUIPMENT CODES:** B = Baler; BP = Bladder Pump; ESP = Electric Submersible Pump; PP = Peristaltic Pump; O = Other (Specify)

**PURGING EQUIPMENT CODES:** B = Baller; BP = Bladder Pump; ESP = Electric Submersible Pump; PP = Peristaltic Pump; O = Other (Specify)

## **SAMPLING DATA**

SAMPLED BY/PRINT / AFFILIATION: <b>H. BOISJES / PACÉ</b>		SAMPLER(S) SIGNATURE(S): <b>H. BOISJES</b>			SAMPLING INITIATED AT: <b>2933</b>	SAMPLING ENDED AT: <b>0936</b>		
PUMP OR TUBING DEPTH IN WELL (feet): <b>13'</b>		TUBING MATERIAL CODE: <b>HDPE</b>	FIELD-FILTERED: <b>Y</b> <b>N</b> Filtration Equipment Type:		FILTER SIZE: _____ μm			
FIELD DECONTAMINATION: PUMP <b>Y</b> <b>N</b>		TUBING <b>Y</b> <b>N</b> (replaced)			DUPPLICATE: <b>Y</b> <b>N</b>
