EXTERNAL MESSAGE
This email originated outside of DEP. Please use caution when opening attachments, clicking links, or responding to this email.

Dear Mr. Morgan,

Please find attached an electronic copy of the August 2021 semi-annual groundwater and surface water monitoring report for the Southeast County Landfill. Residents of the private supply wells sampled should receive their analytical data in the mail this week. Should you or anyone copied on this e-mail have any questions or wish to discuss the information submitted, please feel free to call me directly at (813) 663-3222. The Adapt files and report shall be submitted to Tallahassee SWD through the FDEP Business Portal.

Best Regards,

Michael D. Townsel

Background

The Hillsborough County Public Utilities Department (County) has prepared the semi-annual groundwater monitoring report for the August 2021 monitoring event conducted at the Southeast County Landfill (SELF). As required in Appendix 3 (Water Quality Monitoring Plan of the Solid Waste Operation Permit No. 35435-026-SO-MM), representative samples were collected on August 23 - September 1, 2021 from sixteen (16) surficial aquifer monitoring wells, four (4) upper Floridan aquifer monitoring wells, and four (4) surface water sampling locations. In addition, groundwater samples were collected from three (3) off-site private supply wells. Parameter analysis was completed by our contracted laboratory, Advanced Environmental Laboratories, Inc. (AEL). A site map of each monitoring location is depicted in **Figure 1.**

In accordance with Rule 62-701.510 (6)(a)4 and Condition 4 of the November 20, 2020 Department of Environmental Protection (Department) notification letter to initiate evaluation monitoring was submitted on May 13, 2021. This report provides a brief summary for the August 2021 and supplemental evaluation monitoring water quality events.

Surficial Aquifer Monitoring Wells

Groundwater Elevation and Flow

Groundwater and surface water elevations were recorded on August 23, 2021 and the data is presented in **Table 1**. Elevation data is collected and utilized to prepare a representative surficial aquifer groundwater contour diagram. A diagram was prepared with a 2 ft. contour interval and is utilized to evaluate the direction of flow across the site. **Figure 2** depicts general flow direction across the landfill remains to the west/northwest with an easterly component controlled by nearby Mine Cut #1 and Mine Cut #2. Elevation data continues to be consistent with the historical evaluations of flow within the surficial aquifer at the Southeast County Landfill.

pH

Each surficial aquifer monitoring well continues to exhibit pH values below the Secondary Drinking Water Standard (SDWS) acceptable range of 6.5 to 8.5 pH units from 4.42 to 6.31 pH units. Background water quality recorded prior to landfill construction and operation established pH below the acceptable range within the surficial aquifer and remains consistent with the historical data set. The groundwater analytical data for the surficial and upper Floridan aquifer monitoring wells are included in **Table 2**.

Total Dissolved Solids (TDS)

All surficial monitoring wells as part of the water quality permit were below the SDWS of 500 mg/l with the exception of TH-71A and TH-58. Surficial aquifer detection monitoring well TH-71A is located down gradient west-northwest of Section 9 and exhibited TDS of 1,400 mg/l,

Date: 12/14/2021 Path: U:\LANDFILL\Southeast Landfill Data\Southeast County Landfill Surficial Aquifer Groundwater Contour Map _Figure2_8_23_2021.mxd

respectively. Review of the historical groundwater data can directly trace the upward trend of TDS to the storm water discharge event in 2014 from the active working face along the northwest corner of Section 9. Total ammonia continues to be very low at TH-71A at 1.7 mg/l, which is consistent with historical background water quality. Total ammonia is an excellent indicator parameter of leachate and the current analysis does not exhibit any interaction with groundwater.

An overall upward trend in TDS continues for TH-71A over the period of record; a historical water quality data table and data chart are included in **Appendix A**. The most recent improvements to the storm water conveyance system for Section 9 were completed in August 2019 to allow proper drainage away from the landfill footprint and monitoring location. Based on the location of TH-71A and the low ammonia the elevated TDS is associated with stormwater impacts. The County shall closely monitor the water quality along the west side of Section 9 on the effectiveness of the storm water improvements.

Surficial aquifer detection well TH-58 is located to the northwest of the Phase VI Waste filled area along the western service road at the landfill and exhibited TDS of 820 mg/l. Historical water quality has always exhibited overall good water quality with TDS below the SDWS. The County is continuing to closely observe the TDS values at this location.

Arsenic

Arsenic continues to be detected slightly above the PDWS of 0.01 mg/l in surficial aquifer detection monitoring well TH-58 at 0.015 mg/l and detection monitoring well TH-65 at 0.018 mg/l. Arsenic in the groundwater continues to be directly attributable to the liberation from sediments in an anaerobic environment ongoing under the lined landfill. There are no other exceedances of arsenic at the landfill and the water quality continues to be stable and non-migrating.

Chloride

All surficial monitoring wells were below the SDWS of 250 mg/l with the exception of TH-71A. As depicted in the water quality table and data chart included in **Appendix A,** chloride was detected above the SDWS in TH-71A at 330 mg/l and has consistently trended upward over the period of record. The County implemented drainage improvements to effectively remove storm water away from the landfill and hopefully reverse the water quality trends moving forward.

Iron

Iron was detected above the SDWS of 0.3 mg/l in most of the surficial aquifer detection and background water quality monitoring wells across the site. Concentrations exceeding the standard ranged from 0.49 to 44 mg/l with the highest concentrations in surficial aquifer

detection wells TH-70A, and TH-71A along the west side of Section 9, where iron producing microbial processes are ongoing in the soil and groundwater. Iron has been documented to be present across the site prior to landfill construction and operation; therefore, the County maintains the position elevated iron within the surficial aquifer is naturally occurring. The certified laboratory report from AEL for the surficial aquifer monitoring wells is included in **Appendix B**.

Vanadium

Vanadium was observed in surficial aquifer background monitoring wells TH-61A and TH-83 above the Ground Cleanup Target Level (GCTL) of 0.049 mg/l at a concentration of 0.17 mg/l and 0.15 mg/l. Vanadium observed at TH-61A has exhibited concentrations above the standard and are relatively consistent over the period of record and based on the up gradient location, naturally occurring in the formation. The vanadium in TH-83 may also be naturally occurring in the formation; however, the County shall continue to closely observe the vanadium in this detection well.

Upper Floridan Aquifer (UFA) Monitoring Wells

A brief description of the groundwater data for the four (4) UFA monitoring wells is provided in the paragraphs below. Water quality results of the UFA are depicted in **Table 2** and the certified laboratory report provided by AEL is included in **Appendix B**.

Total Dissolved Solids (TDS)

All Upper Floridan aquifer (UFA) monitoring wells were below the SDWS for TDS with the exception of TH-72. UFA monitoring well TH-72 exhibited elevated TDS at 700 mg/l and is consistent with the data presented over the period of record. TDS in TH-72 is attributable to the former sinkhole in Phase VI of the landfill where waste and injected grout materials utilized for subsurface stabilization and remediation encountered the UFA. Downgradient compliance point for the monitoring of Phase VI, identified as TH-78, continues to exhibit water quality within respective standards and clearly demonstrates there are no impacts to downgradient receptors.

Iron

Iron was observed at the SDWS of 0.3 mg/l in UFA monitoring well TH-72 and is consistent since sinkhole stabilization activities were completed in 2015. The current semi-annual monitoring of TH-72 and the downgradient water quality in UFA monitoring well TH-78 continues to demonstrate iron above the SDWS is not laterally migrating off site.

Surface Water Sampling Locations

A brief and detailed description of the surface water data is provided in the paragraphs below. The data is provided in **Table 3** of the report and the laboratory report from AEL is in **Appendix B**.

Dissolved Oxygen

Surface water sampling locations Mine Cut 1D, Stream-3A, SW-3B2B, and Stream 3C2 exhibited dissolved oxygen at 0.4 mg/l, 0.24 mg/l, 3.16 mg/l, and 3.46 mg/l. Surface water sampling location Stream-3C2 is the discharge monitoring point for the site in the tributary to Long Flat Creek. Compiled data exhibits improving water quality across the tributary and is consistent with the historical data set.

Private Supply Well Sampling Locations

Iron

Three private supply wells south and east of the landfill were sampled on September 1, 2021. The private supply well owned by Mr. Terry Holland, located at 121 Carter Road, exhibited iron above the SDWS of 0.3 mg/l, at a concentration of 1.7 mg/l. Concentrations of iron are consistently above the SDWS at the Holland well and the County maintains the position that iron is naturally occurring within production zones of the upper Floridan aquifer. The data is provided in **Table 4** of the report and the laboratory report from AEL is in **Appendix B**.

Evaluation Monitoring Evaluation

Evaluation monitoring as part of the corrective actions continued at the Site near the Phase II waste disposal area by collecting groundwater samples from detection well TH-83 as part of the site wide semi-annual water quality monitoring and quarterly samples from compliance monitoring well TH-84. Representative groundwater samples were collected for the evaluation monitoring on May 5, August 10, and November 3, 2021. Results from the sample collection activities are addressed in the following discussion.

May 5, 2021

Vanadium was observed during in surficial aquifer detection monitoring well TH-83 above the Ground Cleanup Target Level (GCTL) of 0.049 mg/l at a concentration at 0.094 mg/l. The compliance monitoring well, identified as TH-84, exhibited vanadium at 0.0039 mg/l. Vanadium has been observed at upgradient location TH-61A above the standard over the

period of record and appears to be naturally occurring in the lithologic formation. All other parameters were within their respective cleanup standards.

August 10, 2021
Vanadium was observed from compliance monitoring in compliance monitoring well TH-84 above the GCTL of 0.049 mg/l at a concentration at 0.066 mg/l and selenium was observed slightly above the Primary Drinking Water Standard (PDWS) of 0.05 mg/l at 0.053 mg/l. All other parameters were within their respective cleanup standards.

November 3, 2021
Vanadium was observed from compliance monitoring in compliance monitoring well TH-84 above the GCTL of 0.049 mg/l at a concentration at 0.068 mg/l and selenium was observed slightly above the Primary Drinking Water Standard (PDWS) of 0.05 mg/l at 0.054 mg/l. All other parameters were within their respective cleanup standards.

Conclusions
Semi-annual water quality observations at the Southeast County Landfill remain consistent with the historical data set. Surficial aquifer groundwater monitoring wells continue to exhibit pH, TDS, iron, chloride, vanadium, and arsenic outside their applicable primary and secondary standards. Background water quality recorded prior to landfill construction and operation established pH and iron below the acceptable range within the surficial aquifer.

Arsenic was detected in surficial aquifer monitoring well TH-58 and in TH-65 exceeding the PDWS of 0.01 mg/l. Over the period of record, each monitoring location has consistently exhibited the liberation of arsenic due to the anaerobic conditions present under the landfill liner. Additionally, A review of the historical vanadium and selenium in the leachate and effluent is relatively low and below the PDWS. With the vanadium detected over the period of record in upgradient monitoring well TH-61A, the detections in TH-83 and TH-84 may be low level interference or naturally occurring in the upper formation on the east side of the landfill.

Monitoring well TH-71A exhibited TDS and chloride above the SDWS and continues to be attributable to storm water runoff from the surface of Section 9. As the chloride and sodium continued to trend upward over the period of review, TDS continues to be stable and indicate no discernable trends. Corrective actions to the storm water conveyance system were implemented in 2014 and again in 2019 to alleviate the influence and reduce localized TDS in the groundwater.

Upper Floridan Aquifer (UFA) monitoring well TH-72 continues to exhibit minor water quality impacts that are attributable to the former sinkhole within Phase VI of the landfill. TDS continues to exceed their respective standards; however, the water quality remains stable and

consistent. The downgradient compliance point for the monitoring of Phase VI, identified as TH-78, continues to exhibit water quality within their respective standards and clearly demonstrates there are no impacts to downgradient receptors.

Surface water bodies and upgradient private supply wells continue to be monitored semi-annually and exhibit no direct correlation to the groundwater conditions at the landfill.

Notes: Reference Groundwater Guidance Concentrations, FDEP 2012

MCL Standards Derived from the Primary Drinking Water Standard (Ch. 62-520, F.A.C.), the Secondary Drinking Water Standard (Ch. 62-302, F.A.C.), and the Groundwater Cleanup target Levels (Ch. 62-777, F.A.C.)

MCL=Maximum Contaminant Level

NS=No Standard

NS(1)=GCTL of 2.8 is no longer suitable toxilogical reference for evaluating the significance of ammonia concentrations in groundwater.

mg/l = Milligrams Per Liter

ug/l = Micrograms Per Liter

umhos/cm = Micromhos Per Centimeter

NTU=Nephelometric Turbidity Units

mV = millivolts

I = reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

U = parameter was analyzed but not detected.

J4 = Estimated Result

:Exceeds Primary or Secondary Drinking Water Standard, or Groundwater Cleanup Target Level

NOTES:

Referenced, Surface Water Quality Standards Chapter 62-302 and Freshwater Surface Water Cleanup Criteria in Chapter 62-550, Table I, F.A.C.

"ln H" means the natural logarithm of total hardess expressed as miligrams/L of CaCO3.

MCL=Maximum Contaminant Level

NS=No Standard

mg/l = Milligrams Per Liter

ug/l = Micrograms Per Liter

umhos/cm = Micromhos Per Centimeter

NTU=Nephelometric Turbidity Units

mV = millivolts

* = Criteria set forth in accordance with Chapter 62-302.533

I = reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

U = parameter was analyzed but not detected.

:Exceeds Primary or Secondary Drinking Water Standard, or Surfacewater Cleanup Target Level

Notes: Reference Groundwater Guidance Concentrations, FDEP 2012

MCL Standards Derived from the Primary Drinking Water Standard (Ch. 62-520, F.A.C.), the Secondary Drinking Water Standard (Ch. 62-302, F.A.C.), and the Groundwater Cleanup target Levels (Ch. 62-777, F.A.C.)

MCL=Maximum Contaminant Level

NS=No Standard

NS(1)=GCTL of 2.8 is no longer suitable toxilogical reference for evaluating the significance of ammonia concentrations in groundwater.

mg/l = Milligrams Per Liter

ug/l = Micrograms Per Liter

umhos/cm = Micromhos Per Centimeter

NTU=Nephelometric Turbidity Units

mV = millivolts

I = reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

U = parameter was analyzed but not detected.

J4 = Estimated Result

:Exceeds Primary or Secondary Drinking Water Standard, or Groundwater Cleanup Target Level

RE: Workorder: T2115516 SELF Semi-Annual SW

Dear Michael Townsel:

Enclosed are the analytical results for sample(s) received by the laboratory between Monday August 23, 2021 and Wednesday September 1, 2021. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report. The analytical results for the samples contained in this report were submitted for analysis as outlined by the Chain of Custody and results pertain only to these samples.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Heidi Parker

Heidi Parker, Project Manager
