COMMENTS:

On 5/16/22 the Department received a complaint (Complaint ID 6729) about waste runoff leaching into the water at Balm Boyette Scrub Nature Preserve and Alafia River State Park. The complainant alleged that there have been changes in water quality and smell, especially after a rainfall event. During the inspection, Department staff brought up the complaint to Facility Manager Ron Wiesman and was shown the stormwater overflow. The overflow area, located near the northeast corner of the landfill, had no noticeable smell and the water on the adjacent property seemed undisturbed.

Item 1.6: Regarding the exceedances for Secondary Drinking Water Standards (Iron, Chlorides & TDS) in monitoring well TH-71A. Statistical analysis of historical results (2008 -2022) for chlorides, TDS and Iron at this well show an overall increasing trend for all three constituents. A statistical analysis of these parameters was completed from August 2019 (the date of the latest corrective actions where ground improvements were reportedly made to improve stormwater movement away from the area) to the present-2022. Trending from this time period indicates concentrations within groundwater are stable (Cl-) or show no trends (Fe & TDS). Turbidity readings have varied and include some readings over the stabilization criteria of 20 NTU (ranging from 2.6 to 78.3). Low pH (ranging from 6.4 to 5.8) has always been recorded and this condition is found in other surficial wells at the facility. Please continue to monitor trends in TH-71A for compliance.

The data for TH-84 was not included in the WACS upload for the 2022 1st semi-annual groundwater monitoring report. Please include it in the upload in future groundwater monitoring submittals. As a reminder, a new Contamination evaluation monitoring plan is due on 11/7/2023.

Item 2.10: During the inspection, the Operations plan and permit were verified to be current and readily available on site. Training records were reviewed on-site by the department. TREOO spotter and operator Training records for Stephen Bailey Jr. and Martin Bocanegra Jr. were current and available. Rejected loads and outgoing material records were available on-site and were reviewed by Department staff. Following the inspection on 7/1/22, Manager Ron Wiesman sent the weekly storage tank inspections and incoming material summaries for the facility.

Item 2.11: During the inspection, Department staff observed ponding on top of sections 7 & 8 near the ash pile and near the waste tire piles. Facility Manager Ron Wiesman sent documentation on 7/1/22 that the areas had been regraded to prevent ponding. Please ensure that no ponding occurs near waste and regrade immediately if a problem is observed. A few white goods were noted being stored on their sides. Please ensure white goods are properly stored up right until the freon has been removed in accordance with the current Operations Plan.

Item 2.13: The active working face at the time of inspection was Phase II, Lift 18B.

Item 2.11/2.22: Per Section 8.2.1 of the revised Leachate Management Plan received by Tallahassee Solid Waste Permitting on April 16, 2021 (associated with the Leachate Evaporator Addition and Ash Relocation Modification), the runoff within the Temporary Ash Storage Area located on top of Section 7 and 8 of the CEA is bermed, treated as leachate, and drained into a sump.

Item 2.37: All groundwater wells were not inspected during this inspection. All of the wells that were inspected were secured and labeled.

Item 9.10: On July 15, 2022, Mr. Weisman provided the 2021 Fire Safety Survey (conducted on January 11, 2022) for the Waste Tire Processing Area, with no violations noted.
