Re: Lee County Solid Waste Energy Recovery Facility, WACS ID No. 93715
Conditions of Certification, PA90-30H
Karen B. Hawes
County Manager
Request for Approval of Revisions to the Groundwater Monitoring Plan

David M. Owen
County Attorney
Dear Mr. Emery:

Diana M. Parker
County Hearing
Examiner
The Lee County Solid Waste Division (SWD) requests Department approval of revisions to the Groundwater Monitoring Plan (GWMP) for the Lee County Solid Waste Energy Recovery Facility (SWERF). The revised GWMP, which was developed as a stand-alone document, is provided in Attachment 1. A brief history of the ground water monitoring program is provided below followed by a summary and justification of the proposed revisions to the GWMP. As demonstrated in the following paragraphs, the SWD believes the revised monitoring program is consistent with the intent of the Conditions of Certification as it will sufficiently monitor the quality of the shallow aquifer to identify any impacts that may result from the SWERF's operations.

Background

The initial GWMP was prepared pursuant to the SWERF Conditions of Certification (Power Plant Siting Act Permit Application PA 90-30), and submitted to the Florida Department of Environment Protection (Department) in August 1992. The GWMP was implemented in July 1993 and the SWERF began operations in December 1994. The initial monitoring program consisted of quarterly and annual monitoring of six shallow or water table monitoring wells and six 'deep' or sandstone aquifer wells. The quarterly program monitored a number of secondary water quality parameters and general indicators and the annual program monitored several primary drinking water parameters and volatile organic compounds (VOCs).

A revised ground water monitoring program dated April 3, 1996 was approved by the Department on August 14, 1996. Ground water monitoring is currently performed in accordance with the April 1996 GWMP. The April 1996 GWMP included the same inorganic parameters as the initial program but reduced the monitoring frequency of the detection wells and limited monitoring for volatile and semi-volatile organic

Page 2 of 6

compounds (VOCs/SVOCs) to the shallow wells. Monitoring for VOCs/SVOCs in the 'deep' wells (sandstone aquifer wells) was required only if any of these compounds were detected and confirmed in the shallow wells. Note that the April 1996 GWMP referenced monitoring for VOCs/SVOCs, where the initial GWMP only included monitoring for 10 VOCs. This difference is discussed in more detail below as it pertains to the proposed revisions to the GWMP. The April 1996 GWMP effectively reduced the monitoring frequency of the detection wells from quarterly to semi-annually by alternating the wells monitored during each successive quarterly monitoring event. The wells monitored alternated between two groups: Well Group 1 consisted of wells WTE-1S/1D, WTE-2S/2D and WTE-4S/4D, and well Group 2 consisted of wells WTE-1S/1D, WTE-3S/3D, WTE-5S/5D and WTE-6S/6D. The alternating well pattern also applied to the annual monitoring program thereby effectively reducing the annual monitoring frequency of the detection wells to biennially, e.g., monitoring of all detection wells for the annual program parameters took two years to complete. The alternating well pattern did not change the monitoring frequency of the upgradient wells, WTE-1S/1D, as these wells were in both well groups. A summary of the April 1996 GWMP is provided in Attachment 2.

In June 2010, the GWMP was modified for three of the SWERF's six shallow monitoring wells as a result of the Facility's plans to construct and operate a Construction and Demolition Debris Recycling Facility (CDDRF). The Department approved a revised GWMP for these wells on June 18, 2010 with the approval issued for the CDDRF. The ground water monitoring well network for the CDDRF consists of well WTE-2S as the upgradient well, and wells WTE-3SR (the replacement for WTE-3S which is located in the footprint of the CDDRF) and WTE-4S as the downgradient wells. The revised GWMP for these wells consist of semi-annual monitoring for the parameters listed in Rule 62-701.730(4)(b)4., F.A.C. The GWMP for the other three shallow monitoring wells (WTE-1S, WTE-5S, and WTE-6S) and the six deep monitoring wells did not change under the June 2010 modification.

Proposed Modification

The proposed GWMP will expand the ground water monitoring program approved for the three CDDRF monitoring wells to the SWERF's remaining three shallow monitoring wells or wells WTE-1S, WTE-5S and WTE-6S. Thus, the proposed GWMP consists of monitoring all six shallow monitoring wells semi-annually for the parameters listed in Rule 62-701.730(4)(b)4., F.A.C. The proposed GWMP also eliminates the 'deep' or sandstone aquifer monitoring wells from the monitoring program.

The most recent five years of analytical data for all monitoring wells was summarized and is presented in Attachment 3. The data shows that, although certain parameters, namely Iron and TDS and, on occasion, Arsenic, Manganese and Chlorides, have exceeded the Department's corresponding water quality standard, most of the parameters have been below Department standards and/or the background concentrations established for these parameters. Moreover, no increasing trends in

Mr. Charles Emery, III

August 27, 2010

Page 3 of 6

concentrations have been identified for these parameters. Iron and TDS are typically found to be above the corresponding water quality standard in this geographical region. Further, exceedances reported at well WTE-3D, e.g., TDS, Iron, Chlorides, have been attributed to the flowing well that was previously located in the vicinity of this monitoring well and are not due to the Facility's operations. The data indicates that no contamination of the aquifers has resulted from the SWERF's operations. As the SWERF has been operating for approximately 15 years, the data suggests that the Facility's operations do not impact ground water quality.

The main objectives of the proposed GWMP are to implement the same monitoring program at all of the shallow monitoring wells, eliminate the alternating well pattern established in the April 1996 GWMP, and eliminate routine monitoring of the sandstone wells from the monitoring program. The proposed GWMP was recently approved for the three wells that will monitor the CDDRF and, as these wells comprise half of the SWERF's shallow monitoring well network, the proposed GWMP should also be acceptable for the SWERF's other shallow monitoring wells.

The proposed GWMP implements a semi-annual monitoring frequency which is equivalent to quarterly monitoring of alternating well groups under the current quarterly monitoring program. Monitoring all shallow wells semi-annually is preferred over quarterly and annual monitoring of alternating well groups which is confusing and time-consuming to track over time to ensure the correct well group is sampled during each monitoring event. Moreover, the proposed GWMP will increase the monitoring frequency of the detection wells for the primary drinking water parameters from biennially to semi-annually.

The proposed GWMP will monitor for the volatile organic compounds (VOCs) listed in EPA Methods 601 and 602 and Xylenes. Note that EPA Method 8260 includes all of these compounds and is also the appropriate method for ground water monitoring. The parameters from the above-noted methods include 9 of the 10 VOCs listed in the initial GWMP. The single VOC that will be eliminated from the initially approved monitoring program is Ethylene Dibromide also known as EDB or 1,2-Dibromoethane. This parameter has not been detected in the previous five (5) years of monitoring as demonstrated in the summary of the VOC/SVOC data presented in Attachment 4.

Although the data summary shows that several VOCs were occasionally detected, they were either not confirmed by subsequent confirmation sampling or they were also found in one or more of the quality control (QC) blanks collected during the monitoring event. A summary of the monitoring data for QC blanks over the same time period is also provided in Attachment 4. Volatile and semi-volatile organic compound (VOC/SVOC) detects in the control blanks indicates that lab or other contamination caused the detection in the sample and that the VOC/SVOC was not present in the aquifer.

During the January 2008 annual monitoring event, the semi-volatile organic compounds m&p-Cresol and Phenol were detected in monitoring well WTE-3S. A resample event was scheduled and performed by our new laboratory, Flowers Chemical Laboratories,

Inc. (FCL), in April 2008 for WTE-3S for EPA Method 625 which, according to the January 2008 lab report, was the analytical method by which these compounds were identified. The resample confirmed that Phenol was not present; however, results for m&p-Cresol were not included in the report. When questioned recently, the chemist that performed the resample analyses confirmed that m&p-Cresol was not detected in the resample of WTE-3S. The chemist said that m&p-Cresol is not an EPA Method 625 compound, therefore, it could not be included in the report. The chemist also said that because their analytical equipment is calibrated to detect other parameters such as m&p-Cresol, they can determine whether these other parameters are present even though the results can not be included in the report. It is unknown why the laboratory which performed the initial analyses (January 2008) reported this compound under EPA Method 625; however, based on the confirmation from the chemist that performed the resample analyses, m&p-Cresol was not detected in the resample of WTE-3S. Therefore, based on the above and a review of the data provided in Attachment 4, VOCs/SVOCs have not been detected and confirmed in the shallow monitoring wells during the past 5 years of monitoring. Therefore, the VOCs included in the revised GWMP, which are those listed in EPA Methods 601 and 602 along with Xylenes, will be sufficient to detect potential contamination in the shallow aquifer.

The revised GWMP will eliminate several parameters from the current monitoring program, including Zinc, Total Organic Carbon (TOC), Manganese, Total Kjeldhal Nitrogen (TKN) and Selenium but will also add several parameters, including Aluminum, Cadmium, and Nitrate. The historical monitoring data for these five parameters are summarized and presented in Attachment 5. This data shows that the concentrations of these parameters have primarily been below the corresponding drinking water standard and/or below background concentrations. Further, no increasing trends in the concentrations of these parameters have been identified.

Two of these parameters, TKN and TOC, do not have corresponding drinking water standards and, while they both can indicate water quality, TOC is used primarily in the drinking water purification process to determine the level of natural organic matter (NOM) in the source water. Source water with high levels of NOM may increase the amount of cancer-causing chlorinated disinfection byproducts in the processed drinking water. TKN is one of several forms of nitrogen and high levels of TKN may indicate manure or sewer discharge to the water which is more appropriate for surface water bodies and is not likely to occur at the SWERF. Further, two other forms of nitrogen, ammonia as nitrogen and nitrates, are included in the ground water monitoring program, therefore, TKN is not necessary.

Both Zinc and Manganese are secondary drinking water parameters and Zinc has never been detected above its corresponding drinking water standard of 5 mg/L. Manganese has been detected infrequently in concentrations above the Department's secondary drinking water standard of 0.05 mg/L. The presence of manganese in concentrations above this standard are primarily a concern in public water supplies for both aesthetic and maintenance reasons. Historical monitoring results for Manganese show that the manganese concentration has fluctuated from below to above the standard in several of

Mr. Charles Emery, III

August 27, 2010

Page 5 of 6

the facility's monitoring wells; however, and more importantly, no trends for manganese were noted in the historical ground water data. This indicates that manganese is naturally occurring in the ground water and the manganese concentration fluctuates to some degree over time as conditions in the aquifer change.

Finally, Selenium has never been detected above its drinking water standard of 0.05 mg/L. In conclusion, the historical concentrations of these parameters indicate no adverse effects will result from eliminating these parameters from the monitoring program. Further, numerous other parameters which are more suitable for determining water quality of the aquifer will be monitored under the revised GWMP.

The revised GWMP will increase the monitoring frequency of the primary drinking water parameters Sodium, Chromium and Lead to semi-annually. These parameters are currently monitored under the annual program; however, as explained above, annual monitoring of alternating well groups is equivalent to biennial monitoring of all the detection wells. Thus, the revised GWMP will increase the monitoring for these parameters from biennially to semi-annually.

The proposed GWMP will eliminate the sandstone aquifer monitoring wells (also referred to as 'deep' wells) from the monitoring program. Monitoring of the shallow wells only is consistent with the intent of the Conditions of Certification. Section B., Specific Condition I.H.2.c.(1), which states in part 'Sampling of the shallow aquifer ground water quality shall be conducted in at least six well clusters in the site vicinity.' Thus, although the well clusters were installed in both the shallow and sandstone aquifers, the focus was primarily on monitoring the quality of the shallow aquifer. An excerpt from the March 22, 2010 Conditions of Certification containing the referenced language is provided in Attachment 6.

As the monitoring program is intended to identify ground water contamination resulting from the Facility's operations, any contamination caused by the Facility's operations would be detected first in the shallow aquifer. Further, any contamination in of the shallow aquifer is unlikely to migrate to the sandstone aquifer due to the presence of the Upper Hawthorne Confining Layer below the water table aquifer. The confining layer is approximately 5 feet thick across the site. For these reasons, the SWD believes it is sufficient and appropriate to monitor only the shallow aquifer monitoring wells.

The SWD will continue to inspect the sandstone aquifer monitoring wells on a semi-annual basis and will make repairs to the wells as needed. Water levels in the sandstone wells will also be measured during the semi-annual monitoring events and ground water contour maps of the sandstone aquifer will be prepared and submitted with the Water Quality Monitoring Reports. Therefore, although the revised GWMP proposes to monitor only the shallow aquifer, if future monitoring data identifies contamination in the shallow aquifer, and if deemed necessary by the Department, monitoring can resume in the sandstone wells.

Mr. Charles Emery, III

August 27, 2010

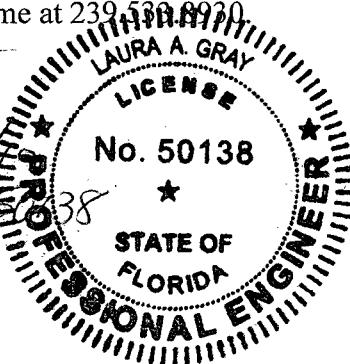

Page 6 of 6

In conclusion, based on the evaluation of historical monitoring data and the discussion of the changes to the monitoring program proposed herein, the intent of the Conditions of Certification will be maintained under the revised GWMP. Therefore, we request Department approval of the revised GWMP provided in Attachment 1.

If you have any questions pertaining to the information or data provided herein, please do not hesitate to call me at 239.530.8930.

Sincerely,

Laura A. Gray, PE
Engineering Manager
Solid Waste Division

Attachment 1

Ground Water Monitoring Plan, Lee County Solid Waste Energy Recovery Facility, August 2010 (Proposed)

Ground Water Monitoring Plan

Lee County Solid Waste Energy Recovery Facility

This Ground Water Monitoring Plan (GWMP) was developed by the Lee County Solid Waste Division (SWD) to summarize the ground water monitoring program for the Lee County Solid Waste Energy Recovery Facility (SWERF) as required by the Facility's Conditions of Certification, PA90-30H, dated March 22, 2010.

Ground Water Monitoring Well Network

In accordance with Section B., Specific Condition I.H.2.c., of the Facility's Conditions of Certification, the Facility will monitor the quality of the shallow aquifer by sampling ground water monitoring wells WTE-1S, WTE-2S, WTE-3SR, WTE-4S, WTE-5S and WTE-6S. Note that well WTE-3SR replaced well for WTE-3S which had to be moved as it was located in the footprint of the proposed Construction and Demolition Debris Recycling Facility (CDDRF). The Department approved the location proposed for replacement well WTE-3SR in correspondence dated June 18, 2010 which approved the Facility's request to construct and operate a CDDRF at the SWERF. Figure 1, Ground Water Monitoring Well Location Map, shows the approximate locations of the monitoring wells which comprise the SWERF's ground water monitoring well network.

Ground Water Sampling and Analyses

Ground water samples will be collected from monitoring wells WTE-1S, WTE-2S, WTE-3SR, WTE-4S, WTE-5S and WTE-6S on a semi-annual frequency and analyzed for the parameters listed in F.A.C. Rule 62-701.730(4)(b) as shown in Table 1.

Table 1

Field Parameters	Lab Parameters	Lab Parameters	Lab Parameters
pH	Aluminum	Arsenic	Xylenes
Turbidity	Chlorides	Cadmium	The parameters listed
Temperature	Nitrate	Chromium	in EPA Methods
Specific Conductivity	Sulfate	Lead	601 & 602
Dissolved Oxygen	TDS	Mercury	
Water Elevations	Iron	Total Ammonia – N	
Colors/Sheens (visual)	Sodium		

Note: Xylenes and the parameters listed in Methods 601 and 602 are all contained in EPA Method 8260

Sampling will be conducted in accordance with the Department's Standard Operating Procedures, DEP-SOP-001/01, and specifically in accordance with FS 2200, Ground Water Sampling. One of the two semi-annual sampling events will be conducted in the dry season and the other in the wet season, approximately 6 months apart. Laboratories selected to perform environmental sampling and analyses required by Department permits or rules will hold a valid certification from the Department of Health's Environmental Lab Certification Program as required by Chapter 62-160, FAC. All field and laboratory records will be made available to the Department.

Ground Water Monitoring Reports

Semi-annual water quality monitoring reports will be prepared and submitted to the Department in accordance with Rule 62-701.510, FAC. The semi-annual monitoring reports will include the information listed in Rule 62-701.510 (9)(a), FAC. A technical report which has been prepared and signed by a professional engineer or geologist with experience in hydrogeological investigations, will be submitted to the Department as required by 62-701.510(9)(b), FAC. The report will contain a summary of all water level and water quality data collected in the previous 2 ½ years plus, at a minimum, all information listed in Chapter 62-701.510 (9)(b), FAC.

Ground Water Monitoring Well Installation and Abandonment

If a monitoring well becomes damaged, the following procedures will be implemented. The Facility will notify the Department within 30 days of discovery of a damaged well. The Facility will hire a Licensed Well Driller to install a replacement well and to properly abandon the existing, damaged well. The Well Driller will secure the required well construction and abandonment permits prior to performing the work.

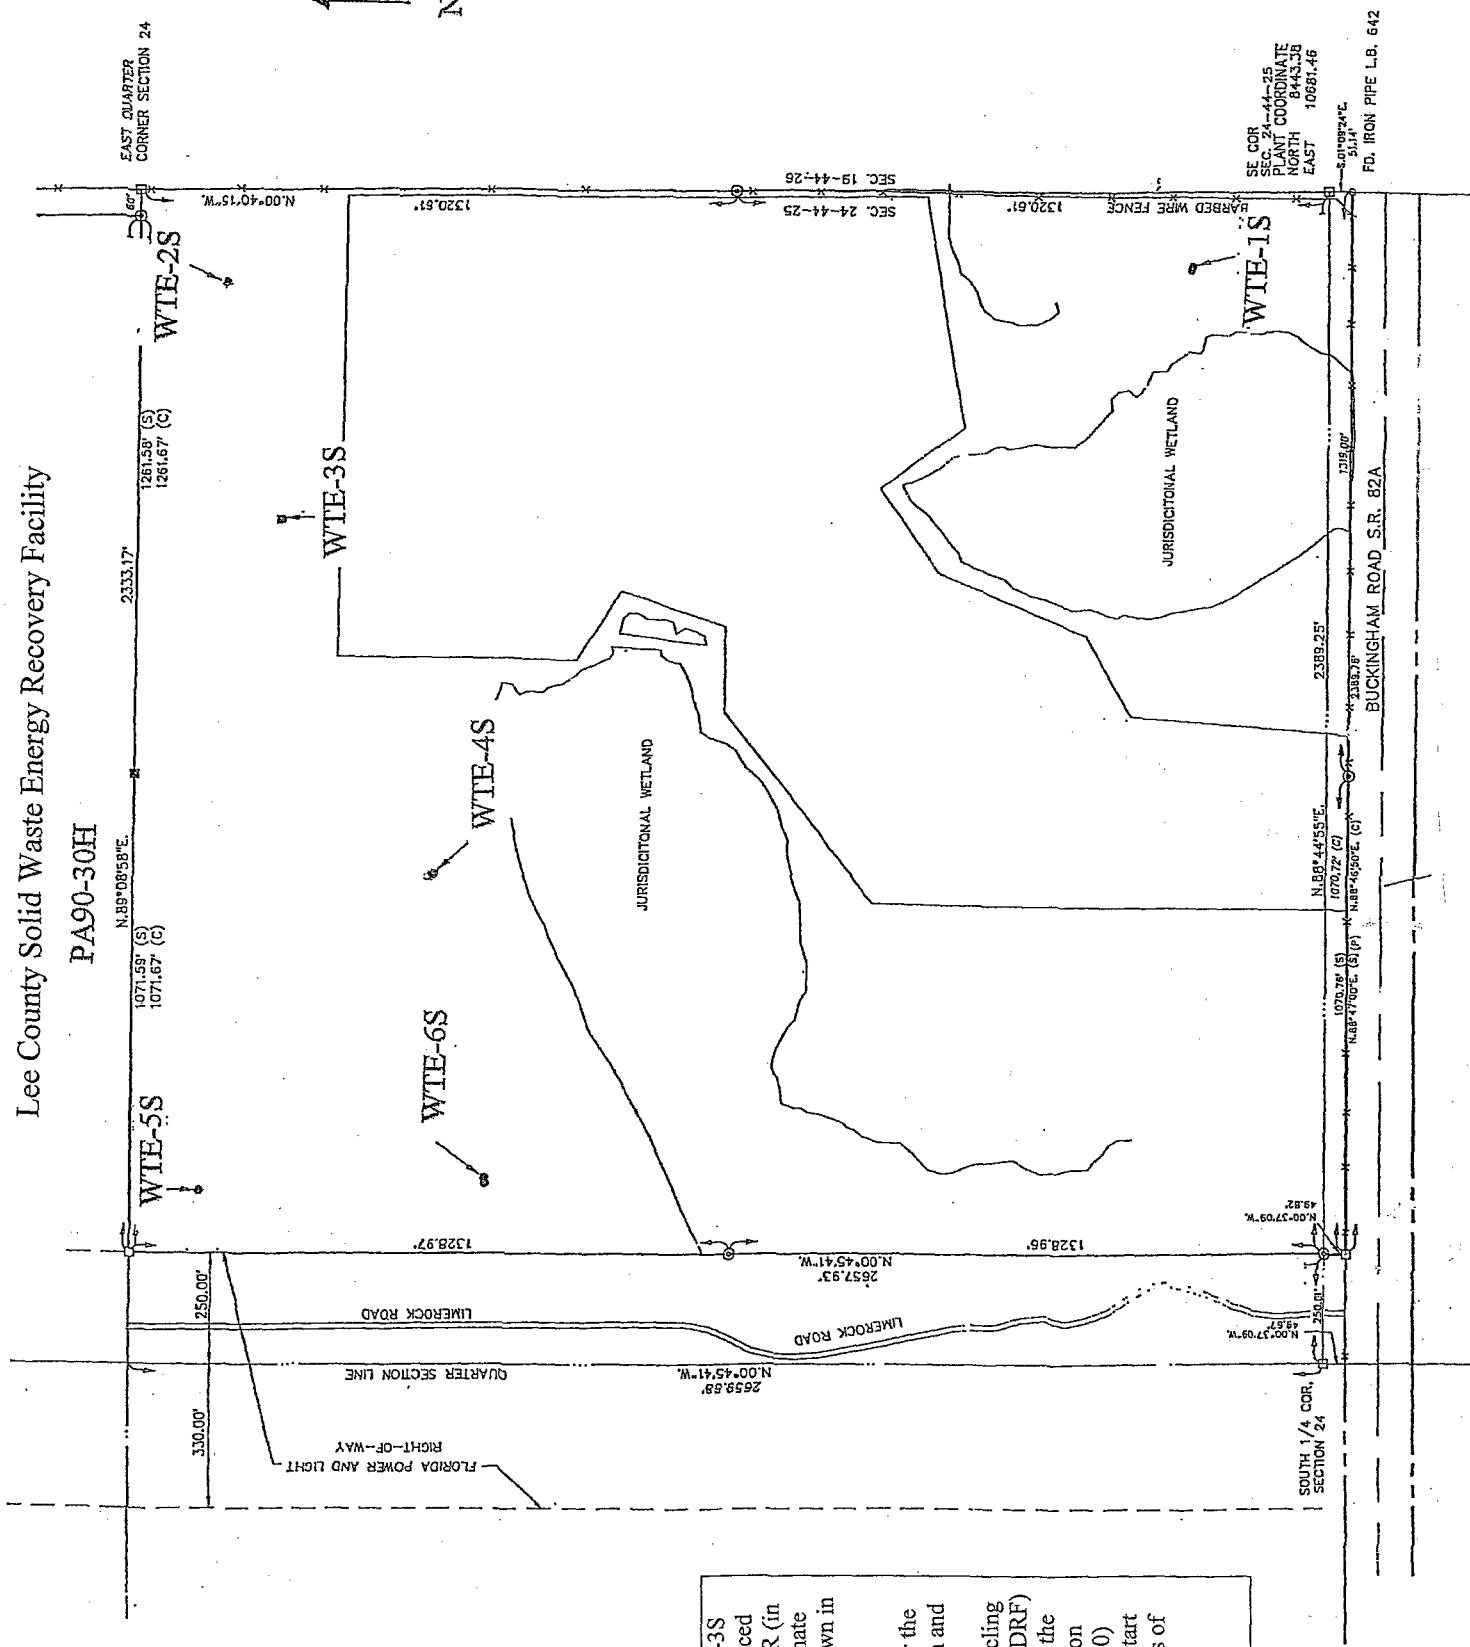

Monitoring wells will be installed in general accordance with ASTM D-5092, Standard Practice for Design and Installation of Ground Water Monitoring Wells in Aquifers, and in accordance with the Department's Bureau of Petroleum Storage Systems Petroleum Cleanup Program's Standard Operating Procedures PCS-006 for the Design, Installation and Placement of Monitoring Wells.

New monitoring wells will be fully developed in accordance with procedures outlined in the above-referenced documents. The existing wells will be properly abandoned in accordance with the procedures in the above-referenced documents which generally consist of grouting from the bottom up using a tremie pipe.

A boring log and a Well Construction and Development Log (provided in PCS-006) will be completed for each well installed. A Department Monitor Well Completion Report (DEP Form # 62-522.900(3) will also be completed and submitted for each well installed.

Lee County Solid Waste Energy Recovery Facility

PA90-30H

Note: WTE-3S will be replaced by WTE-3SR (in the approximate location shown in the post-certification submittal for the Construction and Demolition Debris Recycling Facility (CDDDRF) approved by the Department on June 18, 2010) prior to the start of operations of the CDDDRF.

Figure 1-Ground Water Monitoring Well Network Location Map

Attachment 2

**Lee County Solid Waste Energy Recovery Facility, Ground Water
Monitoring Program Summary (April 1996) (Current)**

Lee County Solid Waste Energy Recovery Facility (SWERF) Ground Water Monitoring Program Summary (April 1996)

Summarized from Table 4-1 (attached) of the Lee County Solid Waste Energy Recovery Facility Ground Water and Surface Water Monitoring Plan, prepared by Malcolm Pirnie, August 1992, contained in the Power Plant Siting Act Permit Application PA 90-30, as revised in April 1996.

Quarterly Monitoring Program

Monitor the appropriate well group (alternates between well Groups 1 and 2) quarterly for the Secondary Drinking Water Parameters (SDWP) and General Indicators (GI) identified below.

Annual Monitoring Program

Monitor the appropriate well group (alternates between well Groups 1 and 2) annually for the Primary Drinking Water Parameters identified below, and the SDWP and GI. Methods 504, 524, and 625 (volatile and semi-volatile organic compounds (VOCs/SVOCs)) are performed on the shallow wells only; if any parameter is detected and confirmed in the shallow wells, the noted Methods will be performed on the deep (sandstone aquifer) wells. The annual program is typically performed in the first calendar quarter.

Well Groups

Group: 1. WTE-1S, -1D, -2S, -2D, -4S, -4D

Group: 2. WTE-1S, -1D, -3S, -3D, -5S, -5D, -6S, -6D

Program Parameters

<u>PDWP</u>	<u>SDWP</u>	<u>GI</u>
Chromium	Chloride	TOC
Lead	Iron	Ammonia (as N)
Sodium	PH	Specific Conductance
*EPA Method 504	Zinc	TKN
*EPA Method 524	Manganese	Arsenic
*EPA Method 625	Sulfate	Selenium
	TDS	Mercury

**The noted Methods were identified from the parameters presented in the request for revisions to the GWMP dated April 1996 and approved by the Department in August 1996.*

Identification and Description of the Qualifiers Noted in the Data Summaries

Lee County Environmental Laboratory's Data Qualifiers

- ! Data deviate from historically established concentration ranges.
- ? Not reported due to interference.
- Value reported is the arithmetic mean of two or more determinations.
- A Analysis performed by Alta Analytical Perspectives - DOH # E87608
- B Results based upon colony counts outside the acceptable range.
- C Analysis performed by client not a NELAC certified laboratory.
- D Measurement made in the Field.
- E Analysis performed by Florida Department of Health, Jacksonville, Lab Accession # IRC 180-2002
- F Analysis performed by Florida Department of Health, Tampa, FL, DOH # E14157
- G Extra samples were taken at composite stations.
- H Analysis performed by ELAB, Inc. of Ormond Beach, FL, DOH # E83079
- I Analysis performed by EMSL Analytical, Inc., Miami Beach, FL - DOH # E86795
- J Analysis performed by Florida Radiochemistry Services Inc., Orlando, FL - DOH # E83033
- K Analysis performed by Green Water Laboratories, Palatka, FL
- L Value based on field kit determination; result may not be accurate.
- M the value is equal to or between the laboratory method detection limit and the laboratory practical quantification limit.
- N Estimated value; value may not be accurate.
- O Surrogate recovery limits have been exceeded.
- P No known quality control criteria exist for the component.
- Q The reported value failed to meet the established quality control criteria for either precision or accuracy.
- R The sample matrix interfered with the ability to make any accurate determination.
- S The data are questionable because of improper laboratory or field protocols.
- T The field calibration verification did not meet calibration acceptance criteria.
- U Correlation coefficient of calibration curve < 0.995.
- V Seeded BOD samples did not exhibit dissolved oxygen drop of at least 2 mg/L.
- W Off scale low. Actual value is known to be less than value given.
- X The value is less than the lowest calibration standard and the calibration curve is known to be non-linear.
- Y The value is known to be less than the reported value based on sample size, dilution or some other variable.
- Z Analysis performed by KNL Laboratory Services DOH # E84025
- A Off scale high. Actual value is known to be greater than value given.
- B Presence of material verified, but not quantified; actual value is less than the value given.
- C Presumptive evidence of presence of material.
- D Sampled, but analysis not performed.
- E Although 2 dissimilar GC columns confirmed the presence of the target analyte, relative % difference is >40%.
- F Sample held beyond the accepted holding time.
- G Significant rain in the last 48 hours.
- H Analysis performed by Severn Trent Laboratories, Tallahassee, FL, DOH # E81005.
- I Value reported is less than the laboratory method detection limit.
- J Indicates that the compound was analyzed for but not detected.
- K Analysis performed by Underwriters' Laboratories Inc. DOH # E87775
- L Indicates that the analyte was detected in both the sample and the associated method blank.
- M Indicates that the analyte was detected in both the sample and associated field blank at a level of <5X the blank value.
- N The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
- O Too many colonies were present (TNTC); the numeric value represents the filtration volume.

Lee County Environmental Laboratory's Data Qualifiers

- ! Data deviate from historically established concentration ranges.
- * Not reported due to interference.
- ? Data rejected and should not be used. Some or all the quality control data for the Analyte were outside criteria, and presence or absence cannot be determined.
- A Value reported is the arithmetic mean of two or more determinations.
- B Analysis performed by Alta Analytical Perspectives - DOH # E87608
- C Results based upon colony counts outside the acceptable range.
- BC Analysis performed by client not a NELAC certified laboratory.
- D Measurement made in the Field.
- DOHJ Analysis performed by Florida Department of Health, Jacksonville, Lab Accession # IRC 180-2002
- DOHT Analysis performed by Florida Department of Health, Tampa, FL, DOH # E14157
- E Extra samples were taken at composite stations.
- ELAB Analysis performed by ELAB, Inc. of Ormond Beach, FL, DOH # E83079
- EMSL Analysis performed by EMSL Analytical, Inc., Miami Beach, FL - DOH # E86795
- FRS Analysis performed by Florida Radiochemistry Services Inc., Orlando, FL - DOH # E83033
- GWL Analysis performed by Green Water Laboratories, Palatka, FL
- H Value based on field kit determination; result may not be accurate.
- I The value is equal to or between the laboratory method detection limit and the laboratory practical quantification limit.
- J Estimated value; value may not be accurate.
- J1 Surrogate recovery limits have been exceeded.
- J2 No known quality control criteria exist for the component.
- J3 The reported value failed to meet the established quality control criteria for either precision or accuracy.
- J4 The sample matrix interfered with the ability to make any accurate determination.
- J5 The data are questionable because of improper laboratory or field protocols.
- J6 The field calibration verification did not meet calibration acceptance criteria.
- J7 Correlation coefficient of calibration curve < 0.995.
- J98 Seeded BOD samples did not exhibit dissolved oxygen drop of at least 2 mg/L.
- K Off scale low. Actual value is known to be less than value given.
- K1 The value is less than the lowest calibration standard and the calibration curve is known to be non-linear.
- K2 The value is known to be less than the reported value based on sample size, dilution or some other variable.
- KNL Analysis performed by KNL Laboratory Services DOH # E84025
- L Off scale high. Actual value is known to be greater than value given.
- M Presence of material verified, but not quantified; actual value is less than the value given.
- N Presumptive evidence of presence of material.
- O Sampled, but analysis not performed.
- P Although 2 dissimilar GC columns confirmed the presence of the target analyte, relative % difference is >40%.
- Q Sample held beyond the accepted holding time.
- R Significant rain in the last 48 hours.
- STLT Analysis performed by Severn Trent Laboratories, Tallahassee, FL, DOH # E81005.
- T Value reported is less than the laboratory method detection limit.
- U Indicates that the compound was analyzed for but not detected.
- ULI Analysis performed by Underwriters Laboratories Inc. DOH # E87775
- V Indicates that the analyte was detected in both the sample and the associated method blank.
- V1 Indicates that the analyte was detected in both the sample and associated field blank at a level of <5X the blank value.
- Y The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
- Z Too many colonies were present (TNTC); the numeric value represents the filtration volume.

FCL DATA QUALIFIERS (BELOW) (APPLIES TO ALL FCL DATA)

Lee County Solid Waste Division
10500 Buckingham Rd. (2nd Floor)
Ft. Myers, FL 33905

PO #: RFP-08-01
Client Project #: WTE Group 2-Q-wells
Date Sampled: Apr 7, 2010
May 3, 2010; Invoice: 120621

Narrative Report

Sample Handling

Sample handling and holding time criteria were met for all samples. Samples collected by submitter. No unusual events occurred during analysis. Results are reported on a wet weight basis for aqueous matrices and on a dry weight basis for sludge and soil matrices unless otherwise noted. Sample results reported as dissolved were field filtered.

Quality Control

Enclosed analyses met method or FCL criteria, unless otherwise denoted on the sample results. Applied data qualifiers are defined below.

Attachments

Chain of Custody

Field Data

Qualifier Meaning

U	Compound was analyzed for but not detected.
J	One or more QC samples associated with this data value exceeded QC limits.
J1	Surrogate recovery limits have been exceeded.
J2	No known quality control criteria exist for the component.
J3	Reported value failed to meet established quality control criteria for either precision or accuracy.
J4	Sample matrix interfered with the ability to make an accurate determination on the spiked sample.
Q	Sample held beyond the accepted holding time.
L	Off-scale high; reported concentration exceeds the highest standard.
V	Analyte was detected in both the sample and the associated method blank.
ZTNTC	Too numerous to count. Numeric value represents filtration volume.
A	Absent
P	Present
T	Value reported is less than the statistical method detection limit. Reported for informational purposes only.
M	Value reported is greater than the statistical method detection limit, but less than the reported MDL.
G	The greatest of the dilutions performed did not yield sufficient oxygen depletion for valid data.
S	The least of the dilutions performed did not yield sufficient oxygen residual for valid data.
O	Result is greater than (over) the specified value.
I	Reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
B	Results based upon colony plate count outside ideal range.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.

Note 1: The following VOC/SVOC detected as shown in table above were also found in the one or more of the blanks indicating the compounds were due to lab/other contamination and were not present in the well (See VOC/SVOC in Blanks Summary)

Compounds (also in blanks): Benzene, MTBE, Toluene (4/15/05 sample); Iodomethane (1/19/07 sample) and n-Decane (1/31/08 sample)

Note 2: Bis(2-Ethylhexyl)phthalate detection on 1/19/07 was not confirmed in resample of 3/8/07 (noted in table above as '(Note 2-R)').

Note 1: The following VOC/SVOC detected as highlighted in table above were also found in the one or more of the blanks indicating the compounds were due to lab/other contamination and were not present in the well (See VOC/SVOC in Blanks Summary).

Compounds (also in blanks): Benzene, MTBE, Toluene (4/15/05 sample) and Iodomethane (1/19/07 sample)

Note 2: Bis(2-Ethylhexyl)phthalate detection on 1/19/07 was not confirmed in resample of 3/8/07 (noted in table above as '(Note 2-R)').

Note 2: Phenol, and Bis(2-ethylhexyl)phthalate detected in 1/24/08 sample were not confirmed in resample performed on 4/17/08 (noted in table above as '(Note 2-R)'). Although m&p-Cresol detected in 1/24/08 sample was not reported in the 4/17/08 resample results, the chemist that performed the resample analyses confirmed that m&p-Cresol was not detected in resample; however, they also stated that because m&p-Cresol was not a compound listed in Method 625 the results for the compound (undetected) could not be reported for Method 625 on the lab report.

Note 1: The following VOC/SVOC detected as highlighted in table above were also found in the one or more of the blanks indicating the compounds were due to lab/other contamination and were not present in the well (See VOC/SVOC in Blanks Summary).

Compounds (also in blanks): Toluene (4/15/05 sample) and Iodomethane (1/19/07 sample)

Note 2: Bis(2-Ethylhexyl)phthalate and Iodomethane detected in 1/19/07 sample was not confirmed in resample of 3/8/07 (noted in table above as '(Note 2-R)').

Note 1: The following VOC/SVOC detected as shown above were also found in the one or more of the blanks indicating the compounds were due to lab/other contamination and were not present in the well (See VOC/SVOC in Blanks Summary)
 Compounds (also in blanks): n-Decane in /24/08 sample

**Summary of Five (5) Years of Monitoring Data
(Quality Control Blanks for VOC/SVOCs Only)**

Lee County Solid Waste Energy Recovery Facility

Summary of Equipment and Field Blank Results for Volatile and Semi-Volatile Organic Compounds

2nd Quarter 2005 through 2nd Quarter 2010

Attachment 5

Summary of Ground Water Monitoring Data for all Wells for 5 parameters
to be Eliminated (TOC, Manganese, Zinc, TKN, and Selenium)

- Historical Zinc, TOC, and Manganese Concentrations in wells WTE-1S/1D through WTE-6S/6D
- Historical TKN and Selenium Concentrations in wells WTE-1S/1D through WTE-6S/6D

Historical Zinc, TOC, and Manganese Concentrations in WTE-1S

SECTION B. SPECIFIC CONDITIONS

SECTION B. SPECIFIC CONDITIONS

I. DEPARTMENT OF ENVIRONMENTAL PROTECTION

A. *Facilities Operation*

Nothing in these Conditions shall be construed to allow operation (including periods of pollution control equipment malfunction) that is inconsistent with, or in violation of any Federal permit or rule.

B. *Adverse Impact*

The Licensee shall take all reasonable steps to minimize any adverse impact resulting from noncompliance with any limitation specified in this certification, including such accelerated or additional monitoring as necessary to determine the nature and impact of the noncomplying discharge.

C. *Dust and Odors*

The Licensee shall employ proper odor and dust-control techniques to minimize odor and fugitive dust emissions. The applicant shall employ control techniques sufficient to prevent nuisance conditions on adjoining property.

D. *Protection of Vegetation*

The Licensee shall develop the site so as to retain a buffer of trees or shall plant a buffer of trees sufficient to minimize the aesthetic and noise impacts of the facility. The buffer, as far as practicable, shall be of sufficient height and width suitable for the purpose of mitigating both construction and operational impacts of the facility.

E. *Environmental Control Program*

An environmental control program shall be established under the supervision of a Florida registered professional engineer to assure that all construction activities conform to applicable environmental regulations and the applicable Conditions of Certification. If a violation of standards, harmful effects, or irreversible environmental damage, not anticipated by the application or the evidence presented at the certification hearing, is detected during construction, the Licensee shall notify the South District Office (DEP SD) as required by Condition VIII.

F. *Operational Contingency Plans*

1. Operating Procedures

The Licensee shall develop and furnish the South District Office a copy of written operating instructions for all aspects of the operations which are critical to keeping the facility working properly. The instructions shall also include procedures for the handling of suspected hazardous, toxic and infectious wastes.

2. Contingency Plans

The Licensee shall develop and furnish the South District Office written contingency plans for the continued operation of the system in event of breakdown. Stoppages which compromise the integrity of the operations must have appropriate contingency plans. Such contingency plans shall identify critical spare parts to be readily available.

SECTION B. SPECIFIC CONDITIONS

3. Current Engineering Plans

The Licensee shall maintain a complete current set of modified engineering plans, equipment data books, catalogs and documents in order to facilitate the smooth acquisition or fabrication of spare parts or mechanical modifications.

4. Application Modifications

The Licensee shall furnish appropriate modifications to drawings and plot plans submitted as part of the application, including operational procedures for isolation and containment of hazardous wastes.

G. Cooling Water

1. The Lee County Solid Waste Energy Recovery Facility may utilize reclaimed water from a domestic wastewater treatment plant or stormwater run-off as a source of cooling water. If the Licensee is forced to use groundwater for cooling due to non-availability of reclaimed water, such use shall be in accordance with Section B, Condition II.

2. Prior to use in the cooling tower, reclaimed water shall be treated to reduce turbidity to 5 NTU or less and disinfected by use of chlorine or other suitable biocide to achieve a 1.0 mg/l concentration of total chlorine residual after a 15 minute contact time.

H. Operation

1. Wastewater Disposal

A complete submittal of plans, drawings and specifications for leachate collection systems, pumps, lift stations, sewage collection systems, and wastewater collection systems in accordance with appropriate DEP rules shall be furnished to the South District Office for approval at least 90 days prior to start of construction for the particular of such component. In order to obtain approval, the receiving sewage treatment plant shall indicate its ability and willingness to accept the wastewater. Also plans and specifications for connections to off-site sewage and wastewater transmission systems shall be furnished to the South District Office for approval 90 days prior to start of construction. Review shall be accomplished in accordance with Section A, Condition XIX.

2. Water Discharges

a. Surface Water

Any discharges from the site stormwater system via the emergency overflow structure which results from an event LESS than a ten-year, 24-hour storm (as defined by the U.S. Weather Bureau Technical Paper No. 40, or the DOT drainage manual, or similar documents) shall meet applicable State Water Quality Standards, Chapter 62-302, F.A.C., and Chapter 40-E, F.A.C.

b. Groundwaters

All discharges to groundwaters shall be collected and treated as necessary, or otherwise be of high enough quality, to be able to meet the applicable Water Quality Standards of Sections 62-520.400 and 62-520.420, F.A.C., at the boundary of a zone of discharge approved for each potential pollution source. If monitoring should indicate a violation

SECTION B. SPECIFIC CONDITIONS

of the standards, the Licensee shall immediately notify the South District office and SFWMD and institute remedial action.

c. Groundwater Monitoring Program

(1) Sampling of the shallow aquifer groundwater quality shall be conducted in at least six well clusters in the site vicinity. At least one of these wells shall be up the hydrologic slope from the facility to provide current background data. Other wells shall be located down the hydrologic slope from the ground water discharge areas. Specific location of any new wells or modifications to the monitoring program may be proposed by the applicant, but shall be approved by the South District Office prior to the construction of the new monitoring wells.

(2) The groundwater monitoring plan submitted August 1992, as modified by April 3, 1996, amendment shall be implemented.

(3) Upon completion of construction of the groundwater monitoring system, the following information shall be submitted to the South District Office for all ground water monitoring wells and any new well(s) constructed:

Well identification	Driller's log
Latitude/Longitude	Total depth of well
Aquifer monitored	Casing diameter
Screen type & slot size	Casing type and length
Screen length	SFWMD well construction permit numbers
Elevation at top of pipe	Elevation at land surface

(4) Upon completion of construction of the groundwater monitoring system, but no less than 12 months before the commencement of operation the Licensee shall sample all ground water monitoring wells for the Primary and Secondary Drinking Water parameters included in Chapter 62-550, F.A.C. The specific parameters to be sampled are listed in Sections 62-550.310, 62-550.320 and 62-550, Part V, F.A.C.

(5) The field testing, sample collection and preservation and laboratory testing, including quality control procedures, shall be in accordance with Chapter 62-550, Part V, F.A.C. Approved methods as published by the Department or as published in Standard Methods, A.S.T.M. or EPA methods shall be used. Approved methods for chemical analyses are summarized in the Federal Register, December 1, 1976 (41FR52780) except that turbidity shall be measured by the Nephelometric Method.

(6) All required submittals shall be sent to the South District Office within 60 days of installation of the ground water monitoring system. Upon receipt and review of the required data, quarterly sampling reports shall be submitted to the South District Office commencing 12 months prior to the operation of the SWERF. Any required modifications of the groundwater monitoring system or program shall be modified in accordance with the provisions of Section A, Condition XXI. The groundwater monitoring program may be reviewed annually.
