Subject: Proposal for P2

Hey Jenna,

I wanted to propose to you the following...

Project Description: include details such as the specific equipment to be installed or the actual changes to be made to the processes. You should include a date by which the project will be completed. You should include manufacturer or vendor information and specifications. Be sure to include a description of the solar unit – manufacturer, power output, etc

I spoke with Energy Labs yesterday and e-mailed him today. In the next week, we will have a Performa of exactly what the equipment and cost will be. As for now, the target price is \$20,000. As we already have an existing system in place, it will be relatively easy to hit this target as we are only adding PV collectors. More info will follow.

Environmental and Economic Benefits: a summary of benefits to the environment and an estimate of the savings in energy consumption. Figures quoted should represent volumes annually and should be equalized for production rate changes. Associated cost savings should be included. This section can summarize the benefits either in descriptive or table format.

The reduction of electric use and a decrease in our company's carbon foot print.

Project Cost: include the projected cost for *each component* of the project

As indicated above, approximately \$20,000.

If you have further questions or concerns, please contact me.

Regards,

Harry Lewis

Perry, Jenna D.
