(See attached file: 20130930034657.pdf)

Perry Facility DEP visit:

1. Due to the age of the facility I am not aware of a permit for the wash rack.
2. The Ring Power procedure for the battery recycling is for used batteries to be sent on the company truck to central location for further shipment to a recycling facility . In the case of Perry the central location is Ocala. The Ocala Ring Power store is our hub for the nightly loop parts truck. In Ocala the batteries are off loaded to a storage site where they are consolidated with batteries from the Ocala shops and possibly other Ring Power locations. We have a paper trail that starts at the site of origin which includes a inventory of batteries which are prepared for shipment and a loop shipper showing the originating site and the site of destination . A copy of the shipper and the inventory are keep at the site of origin and a copy is keep at the destination upon arrival. When the amount of old batteries at the collection site reaches a certain amount in this cast at the Ocala store a shipper and inventory are prepared for all the accumulated batteries for the East Penn Manufacturing Company. East Penn will be notified of the pick up request and will send a truck to pick up the batteries for delivery to the recycling facility in Pennsylvania. Copies of the paper work are keep in the Ring Power branch store and a Shipping memo is returned to the branch from East Penn indicating the batteries reached the proper destination. Because there are so few batteries replaced in the Perry store they are not sent to Ocala often. I have arranged for the batteries found on site at the time of the inspection to be shipped to Ocala and will provide copies of the paperwork as soon as it is available.
3. I will respond on the aerosol can disposal later. What was the decision on moving cans with some residual left to a location where they can be properly emptied into a puncture device?

Lake City Facility DEP visit:

1. I will respond to the aresol can discussion later.

2. The procedure for handling Batteries is the same for Lake City as described for Perry except they are sent from Lake City to St Augustine not Ocala. I have attached paperwork for the process of moving batteries from one site to another.

3. We are investigating a linen service for the rags but in the mean time all disposal wipes are to go in to the same drums with the soiled Pig mats. The company that removes our used oil and filters also removes our used Pig mats for disposal.

Subject Ring Power - Summary of Perry and Lake City inspections

We had a couple follow-up questions from the inspections conducted at the ring Power Perry and the Ring Power Lake City. Please get back to Melissa and I when you can.

Perry facility:

1. Washrack - I am checking with our Industrial Wastewater section to see if the facility is exempt from a permit. I will have more information as it becomes available. The concern with the pit is that stains along the outside wall make it seem that the pit may occasionally overflow and the stains are indicative of oil. The pit is not covered, so in heavy rainfall events it may overflow. Also, the pit may need to be sealed, as concrete is not impervious to used oil. I'm still doing some research on this, but any info you have on the system would be helpful as well.

2. Where are batteries sent for disposal? Any records?

3. Aerosol cans - My concern is that the facility determines that the aerosol can is waste and places it in the 55-gallon drum (some were empty, some were not). Then the 55-gallon drum is eventually sent to the Tallahassee location for disposal (and it wasn't clear what type of disposal). I don't know if the Tallahassee location is authorized to accept CESQG waste. Can you provide clarification or details on how they might be managed moving forward?
Lake City facility:

1. Aerosol cans – several non-empty aerosol cans were on the floor of the shop and behind drums. It wasn't clear how cans were disposed of if non-empty. Can you provide clarification or details on how they might be managed moving forward?

2. Where are batteries sent for disposal? Any records?

3. Currently using disposable rags - Brake cleaner containing toluene is used throughout the facility. Rags with this brake cleaner cannot be disposed of in solid waste trash. Mike McCray indicated that he preferred using a linen service, but he was not sure why the Lake City location was not using one. Thank you,
Stephany Fenn
