Regarding the following conditions / rules cited in the report for the inspection of 08-14-15:

Permit Conditions II.C.2. and II.E.1 – The Permittee is only allowed to treat those hazardous wastes specified in the permit application, specifically, D002 and D004 through D011.

Permit Condition II.C.5. – The Permittee shall ensure that ignitable or reactive waste is not placed into the treatment tank.

40 CFR 264.73(b)(1) – The owner or operator must keep a written operating record at his facility, that includes a description and the quantity of each hazardous waste received, and the method(s) and date(s) of its treatment, storage, or disposal at the facility.

Based on the material presented by EQ and reviewed during the meeting at the SWD on 10-29-15, the Department is satisfied the original documentation submitted by EQ Florida, Inc., did not accurately reflect the wastes that were treated in the hazardous waste treatment tank. Specifically, hazardous waste that was batch treated on June 11, 2015, (Box 72), hazardous waste that was originally batch treated on or around July 8, 2015, (Box 81), and hazardous waste that was batch treated on or around August 11, 2015, (Box 93) did not include any unpermitted waste. The alleged violations did not exist at the time of the inspection, and the associated citations are hereby marked as "deleted."
